## P R E F A C E.

October, 1786.
FIVE years ago, being ftill young, a fmall inheritance, which fell to me, put me in poffeffion of a fum of money. The difficulty was, how to employ it. Some of my friends advifed me to enjoy the capital, others to purchafe an annuity; but, on reflection, I thought the fum too inconfiderable to make any fenfible addition to my income, and too great to be diffipated in frivolous expences. Some fortunate circumftances had habituated me to ftudy; I had acquired a tafte, and even a paffion for knowledge, and this acceffion to my fortune appeared to me a frefh means of gratifying my inclinaVól.I. A tion,
ii $\quad P R E F A C E$.
tion, and opening a new way to improvement. I had read, and frequently heard repeated, that of all the methods of adorning the mind, and forming the judgment, travelling is the moft efficacious; I determined, therefore, on a plan of travelling, but to what part of the world I fhould direct my courfe remained fill to be chofen : I wifhed the fcene of my obfervations to be new, or at leaft brilliant. My own country, and the neighbouring nations, feemed to me cither too well known, or too eafy of accefs : the rifing States of America, and the favages, were not without their temptations; but other confiderations determined me in favour of A fin. Syria, efpecially, and Egypt, both with a view to what they once have been, and what they now are, appeared to me a field equally adapted to thore political and moral obfervations with which I wifhed to occupy my mind. "Thore are the coun" tries," faid I, "in which the greater part of " the opinions that govern us at this day " have had their origin. In them, thofe "religious ideas took their rife, which have " operated fo powerfully on our private

## P R E F A C E.

"s and public manners, on our laws, and " our focial ftate. It will be interelting, " therefore, to be acquainted with the " countries where they originated, the cuf" toms and manners which gave them birth, " and the fpirit and character of the nations "from whom they have been received as "facred: to examine to what degree this " fpirit, thefe manners, and thele cuftoms, "s are altered or retained; to afcertain the " influence of climate, the effects of the "government, and the caufes of the va" rious habits and prejudices of thefe coun" tries; in a word, to judge from their pre" fent ftate, what was their fituation in for" mer times."

On the other hand, confidering the political circumftances of the Turkifh empire, for the laft twenty years, and reflecting on their poffible confequences, it appeared to me equally curious and ufeful to acquire correct notions of its internal government, in order to form a juft eftimate of its real power and refources. With thefe views I fet out for Egypt, about the end of 1782 . After continuing feven months at Cairo, A 2 finding

## iv $\quad \mathrm{P} R \mathrm{E} F \mathrm{~A} \mathrm{C}$.

finding too many obftacles to a proper examination of the interior parts of the country, and too little affiftance in learning Arabic, I determined to proceed into Syria. The more tranquil fate of that province correfponded better with my intentions. Eight months refidence among the Drufes, in an Arabian convent, rendered the Arabic familiar to me, and enabled me to travel through all Syria during a whole year. On my return to France, after an abfence of near three years, imagining my refearches might prove of fome utility, I refolved to publifh a few obfervations on the prefent ftate of Syria and Egypt ; and I was confirmed in this refolution by the difficulty attending travelling in thore countries, which have, therefore, but feldom been vifited, and are but imperfectly known. Travellers, in general, have directed their refearches more to examine their antiquities, than their prefent fituation ; and almoft all, haftily paffing through them, have been deficient in the two principal means of acquiring knowledge, time, and the language of the country. Wuthout pofiefing the language, it is impor-

## PREFACE.

fible to appreciate either the genius or the character of a nation. Interpreters can never fupply the defect of a direct communication. And without continuing a fufficient time, no traveller can form a found judgment, for the novelty of every thing around us naturally confounds and aftonithes. The firft tumult muft fublide, and the objects which prefent themfelves be repeatedly examined, before we can be certain the ideas we have formed are juft. To fee well is an art which requires more practice than is commonly imagined.

On my return to France, 1 found that a late traveller * had anticipated me, with refpect to Egypt, by a firft volume of Letters on that country. He has fince publifhed two others; but, as the field is extenfive and fertile, there ftill remain fome novelties to glean ; and on fubjects already treated, the world may poffibly not be averfe to hear two witneffes.

Syria, though not lefs interefting than Egypt, is undoubtedly a more novel fubject. What has been already written on it by fome

> * M. Savary.
travellers, is now grown obfolete, and, at beft, very imperfect. I had at firft determined to relate only what I myfelf had feen; but, defirous, for the fatisfaction of my readers, to complete my defcription of that province, I was unwilling to deprive myfelf of the obfervations of others, when, from what I had feen myfelf, I could not doubt their veracity.

In my relation, I have endeavoured to maintain the fpirit with which I conducted my refearches into facts; that is, an impartial love of truth. I have refrained myfelf from indulging any fallies of the imagination, though I am no ftranger to the power of fuch illufion over the generality of readers; but I am of opinion that travels belong to the department of hiftory, and not that of romance. I have not therefore defcribed countries as more beautiful than they appeared to me; I have not reprefented their inhabitants more virtuous, nor more wicked than I found them, and I have perhaps been enabled to fee them fuch as they really are, fince I have never received from them either benefite or injuries.

## PREFACE.

As to the form of this work, I have not followed the method ufual in books of travels, though, perhaps, the mott fimple. I have rejected, as too prolix, both the order and the details of an itinerary, as well as all perfonal adventures; $\mathbf{I}$ have only exhibited general views, as better calculated to combine facts and ideas, and from a defire of faving the time of the reader, amid the prodigious fucceffion of new publications. To render more clear my geographical obfervations on Egypt and Syria, I have annexed maps of thofe two countries. That of Egypt, for the Delia, and the defert of Sinai, is laid down from the aftronomical obfervations of M. Niebuhr, who travelled for the King of Denmark, in I7SI: they are the lateft, and moft accurate, yet publifned. The fame traveller has afforded me great afliftance in the map of Syria, which I have completed from that of Danville, and my own obfervations. To conclude, I have no doubt but the lovers of the ancient arts will thank me for accompanying with a drawing the defcription I have given of the two moft beautiful

## viii PREFACE.

beautiful remains of antiquity in Afia, the Ruins of Palmyra, and thofe of the Te nple of the Sun at Balbec; and I have reafon to believe that the admirers of the modern arts will fee with pleafure the execution of the two engraved plates of thofe monu. ments.

## EGYPTAND SYRIA.

## STATE of EGYPT.

## C H A P. I.

Of Egypt, in general, and the City of Alexandria.

I$T$ is in vain that we attempt to prepare ourfelves, by the perufal of books, for a more intimate acquaintance with the cuftoms and manners of nations; the effect of narratives upon the mind, will always be very different from that of objects upon the fenfes. The images the former prefent, have neither correctnefs in the defign, nor livelinefs in the colouring; they are always indifinet, and leave but a fugitive impreffion, very eafily effaced. This we more particularly experience, when we are ftrangers to the objects to be laid before us; for the imagination, in that cafe, finding no terms of comparifon ready Yol. I.

B
formed,
formed, is compelled to collect and compofe new ideas; and, in this operation, ill directed, and haftily executed, it is difficult not to confound the traits, and disfigure the forms. Ought we then to be aitonifhed, if, on beholding the models themfelves, we are unable to difcover any refemblance between the originals and the copies, and if every impreffion bears the character of novelty?

Such is the fituation of a ftranger who arrives, by fea, in Turkey. In vain has he read hiftories and travels; in vain has he, from their defcriptions, endeavoured to reprefent to himfelf the afpect of the countries, the appearance of the cities, the drefles, and manners of the inhabitants: he is new to all there objects, and dazzled with their variety: every idea he has formed to himfelf vanifhes, and he remains abforbed in furprize and aftonifhment.

No place is more proper to produce this effect, and prove the truth of this remark, than Alexandria in Egypt. The name of this city, which recalls to memory the genius of one of the moft wonderful of men; the name of the country, which reminds us of fo many great events; the picturefque appearance of
the place itfelf; the fpreading palm-trees; the terraced houfes, which feem to have no roof; the lofty flender minarets, every thing announces to the traveller that he is in another world; a variety of novel objects prefent themfelves to every fenfe; he hears a language whofe barbarous founds, and fharp and guttural accents, offend his ear; he fees dreffes of the moft unufual and whimfical kind, and figures of the ftrangeft appearance. Inftead of our naked faces, our heads fwelled out with hair, our triangular head-dreffes, and our hort, and clofe habits, he views, with aftonifhment, tanned vifages, with beards and muftachios, bundles of ftuff rolled up in folds on their bald heads; long garments, which, reaching from the neck to the heels, ferve rather to veil than clothe the body, pipes of fix feet long, with which every one is provided, hideous camels, which carry water in leathern pouches, and faddled and bridled affes, which lightly trip along with their riders, in fippers; he obferves their markets ill fupplied with dates, and round flat little loaves; a filthy drove of half ftarved dogs roaming through the ftreets, and a kind of wandering phantoms, which, under a fingle piece of drapery,
difcuver nothing human, but two eyes, which fhew that they are women. Amid this croud of unufual objects, his mind is incapable of reflexion; nor is it until he has reached his place of refidence, fo defireable on landing after a long voyage, that, becoming more calm, he refleets on the narrow, ill paved ftreets, the low houfes, which, though not calculated to admit much light, are ftill more obfcured by lattice work, the meagre and fwarthy inhabitants, who walk bare-footed, without other clothing than a blue fhirt faftened with a leathern girdle, or a red handkerchief, while the univerfal air of mifery, fo manifert in all he meets, and the myftery which reigns around their houfes, point out to him the rapacity of oppreffion, and the diftruft attendant upon flavery. But his whole attention is foon attracted by thofe vaft ruins which appear on the land fide of the city. In our countries, ruins are an object of curiofity: Scarcely can we difcover, in unfrequented places, fome ancient caftle, whofe decay announces rather the defertion of its mafter, than the wretchednefs of the neighbourhood. In Alexandria, on the contrary, we no fooner leave the New Town, than we are aftonifhed
at the fight of an immenfe extent of ground overfpread with ruins. In a walk of two hours, you follow a double line of walls and towers, which form the circumference of the ancient Alexandria. The earth is covered with the remains of lofty buildings deftroyed; whole fronts crumbled down, roofs fallen in, battlements decayed, and the ftones corroded and disfigured by faltpetre. The traveller paffes over a vaft plain, furrowed with trenches, pierced with wells, divided by walls in ruins, covered over with ancient columns, and modern tombs, amid palm-trees, and nopals (a), and where no living creature is to be met with, but owls, bats, and jackalls. The inhabitants, accuftomed to this fcene, behold it without emotion; but the ftranger, in whom the recollection of ancient ages is revived by the novelty of the objects around him, feels a fenfation, which not unfrequently diffolves him in tears, infpiring reflexions which fill his heart with fadnefs, while his foul is elevated by their fublimity.

I fhall not here repeat the defcriptions, given by all travellers, of the remarkable an-
(a) Vulgarly called raquette, the cochineal tree.
tiquities of Alexandria. The reader will find in Norden, Pocock, Niebuhr, and in the Letters lately publifhed by Mr. Savary, every neceffary detail on the baths of Cleopatra, the two obelifks that bear her name, the catacombs, the refervoirs, and the Pillar, improperly called Pompey's (b) Pillar. Thefe names are majeftic; but the originals by no means correfpond with the figures we have feen of them. The pillar alone, from the boldnefs of its elevation, its prodigious circumference, and the folitude with which it is furrounded, impreffes a genuine fentiment of refpect and admiration.

In its modern ftate, Alexandria is the emporium of a confiderable commerce. It is the harbour for all the commodities exported from Egypt by the Mediterranean, except the rice of Damietta. The Europeans have eftablifhments there, where factors difpofe of our
(b) It ought for the future to be called the Pillar of Severus, fince Mr. Savary has proved that it belongs to that Emperor. Travellers differ with refpect to the dimenfions of this column; but the calculation the moft generally admitted at Alexandria, makes the height of the fhaft, with the capital, 96 feet, and the circumference 28 feet, 3 inclies.
merchandize by barter. Veffels are conftantly to be met with there from Marfeilles, Leghorn, Venice, Ragufa, and the dominions of the Grand Seignor; but it is dangerous to winter there. The new port, the only harbour for the Europeans, is clogged up with fand, infomuch that in flormy weather hips are liable to bilge; and the bottom being alfo rocky, the cables foon chafe and part, fo that, one veffel driving againft a fecond, and that againft a third, they are perhaps all loft. Of this there was a fatal inftance fixteen or eighteen years ago, when two-and-forty verfels were dafhed to pieces on the mole in a gale of wind from the north-weft, and numbers have been fince loft there at different times. The old port, the entrance to which is covered by a neck of land called the Cape of Figs ( $c$ ), is not fubject to this inconvenience; but the Turks admit no fhips into it but thofe of Muffulmen. It will perhaps be afked, in Europe, why do they not repair the New Port? The anfwer is, that in Turkey, they deftroy every thing and repair nothing. The old harbour will be deftroyed, likewife,

> (c) Ras el-tin, pronounced tecn.
as the ballaft of veffels has been continually thrown into it for the laft two hundred years. The fpirit of the Turkifh government is to ruin the labours of paft ages, and deftroy the hopes of future times, becaufe the barbarity of ignorant defpotifm never confiders tomorrow.

In time of war, Alexandria is of no importance; no fortification is to be feen; even the Fharos, with its lofty towers, cannot be defended. It has not four cannon fit for fervice, nor a gunner who knows how to point them, The five hundred Janifaries, who Chould form the garrifon, reduced to half that number, know nothing but how to fmoke a pipe. It is fortunate for the Turks that the Franks find their intereft in preferving this city. A fingle Ruffian or Maltefe frigate would fuffice to lay it in afics; but the conqueft would be of no value. A foreign power could not maintain itfelf there, as the country is without water. This muft be brought from the Nile by the Kalidj, or canal of twelve leagues, which conveys it thither every year at the time of the inundation. It fills the vaults or refervoirs dug under the ancient city, and this provifion muft ferve till the next year. It is
evident
evident, therefore, that were a foreign power to take poffeffion, the canal would be fhut, and all fupplies of water cut off.

It is this canal alone which connects Alexandria with Egypt; for, from its fituation without the Delta, and the nature of the foil, it really belongs to the deferts of Africa; its environs are fandy, flat and fterile, without trees and without houfes, where we meet with nothing but the plant (d) which yields the Kali, and a row of palm trees, which follows the courfe of the Kalidj or canal.

We do not really enter Egypt until we arrive at Rofetta, called by the natives Rafbid: there the fands peculiar to Africa end, and a black, fat, and loamy foil, the diftinguifhing characteriftic of Egypt, begins: there, alfo, for the firft time, we behold the waters of the celebrated Nile, which, rolling between two fteep banks, confiderably refembles the Seine between Auteuil and Paffy. The woods of palm-trees, on each fide, the orchards, watered by its ftreams, the lemon, the orange, the banana, the peach, and other trees, by their perpetual verdure, render Rofetta aftonithingly delightful,
(d) Glafs-wort, called by the Arabs el-kali, from whence the name of the falt al-kali.
and its beauties appear fill more charming by its contraft with Alexandria, and the fea we have juft left ; and from hence to Cairo, every object tends to increafe the effect.

As we afcend the river we begin to acquire fome general idea of the foil, the climate, and productions of this celebrated country. Nothing more refembles its appearance than the marfhes of the lower Loire, or the plains of Flanders; inftead however of the numerous trees and country houfes of the latter, we muft imagine fome thin woods of palms and fycamores, and a few villages of mud-walled cottages, built on artificial mounds. All this part of Egypt is fo level, and fo low, that we are not three leagues from the coaft when we firft difcover the palm-trees, and the fands on which they grow; from thence as we proceed up the river, the declivity is fo gentle, that the water does not flow fafter than a league an hour. As for the profpect of the country, it offers little variety; nothing is to be feen but palm-trees, fingle, or in clumps, which become more rare in proportion as you advance: wretched villages compofed of mud-walled huts, and a boundlefs plain, which at different feafons is an
ocean of frefh water, a miry morafs, a verdant field, or a dulty defart; and on every fide an extenfive and foggy horizon, where the eye is wearied and difgufted; at length, towards the junction of the two branches of the river, the mountains of Grand Cairo are difcovered in the eaft, and to the fouth-weft, three detached mafies appear, which, from their triangular form, are known to be the Pyramids. We now enter a valley which turns to the fouthward, between two chains of parallel eminences. That to the eaft, which extends to the Red Sea, merits the name of a mountain from its precipitate elevation, and that of a defart from its naked and favage afpect ( $e$ ); but the weftern is nothing but a ridge of rock, covered with fand, which has been very properly termed a natural mound, or caufeway. To defcribe Egypt in two words, let the reader imagine, on one fide, a narrow fea and rocks; on the other, immenfe plains of fand, and, in the middle, a river flowing through a valley of one hundred and fifty leagues in length, and from three to feven wide, which, at the diftance of thirty leagues from the fea,
(e) Called in Arabic mokattam, or berun mountain.

> feparates
feparates into two arms, the branches of which wander over a foil free from obftacles, and almoft without declivity.

The prevailing tafte for natural hiftory, now, to the honour of the prefent age, become fo general, demands doubtlefs fome details on the nature of the foil, and the minerals of this extenfive country. But, unfortunately, the manner of travelling here is ill adapted to promote fuch refearches. It is not the fame in Turkey as in Europe: with us, travels are agreeable excurfions; there, they are difficult and dangerous undertakings, efpecially for Europeans, whom the fuperfitious natives believe to be forcerers, come to difcover by magic, treafures which the Genii have concealed under the ruins. This ridiculous, but deep rooted opinion, added to perpetual wars and difturbances, deprives the traveller of fecurity, and prevents every difcovery. No one dares cven walk alone in the fields; nor can he procure any body to accompany him. We are confined therefore to the banks of the river, and a route frequented by every one, which can afford no new information. It is only by comparing what we have feen ourfelves with the obfer-
EGYPT AND SYRIA.
vations made by others that fome general ideas can be acquired.

After having made this comparifon, we fhall find reafon to conclude that the bafis of all Egypt, from Afouan, (the ancient Syene) to the Mediterranean, is a continued bed of calcareous ftone, of a whitifh hue, and fomewhat foft, containing fhells analogous to thofe found in the two neighbouring feas ( $f$ ). This quality is difcoverable in the Pyramids, and in the Lybian rock on which they are founded. This ftone is likewife to be found in the Cifterns, in the Catacombs of Alexandria, and in the projecting fhelves upon the coaft. We may alfo obferve it in the Eaftern mountain, in the latitude of Cairo, and the materials with which that city is built. It is this calcareous ftone, in fhort, which forms the immenfe quarries that extend from Saouadi to Manfalout, for the fpace of upwards of twenty-five leagues, according to the teftimony of Father Sicard. That miffionary informs us, alfo, that marble is found in the
(f) Thefe fhells confift principally of echini, volutes, bivalves, and 2 fpecies in the form of lentils. See Shaw's Travels.
valley of Carts ( $g$ ), at the foot of the mountains bordering on the Red Sea, and in the mountains to the north-eaft of Afouan. Between that place and the Cataract are the principal quarries of red granite; but there muft be others lower down, for, on the oppofite fhore of the Red Sea, the mountains of Oreb, of Sinaï, and their dependencies ( $b$ ), at two days journey towards the north, are formed of it. Not far from Afouan, to the northweft, is a quarry of ferpentine ftone, employed in its native ftate by the inhabitants to make veffels which will ftand the fire. And in the fame parallel, on the Red Sea, was formerly a mine of emeralds, all traces of which are now loft. Copper is the only metal of this country mentioned by the ancients. The road to Suez is the part of it where the greatert quantity of what are called Egyptian fints or pebbles, is found, though the bottom be of a calcareous ftone, hard and fonorous; there likewife thofe ftones are found, which, from their form, have been taken for petrified

[^0]wood. In fact, they do refemble logs cut flanting at the ends, and full of fmall holes, and might eafily be taken for petrefactions; but chance throwing in my way a confiderable quantity of thefe, in the road of the Arabs called Tahouga (i), I carefully examined them, and am convinced they are real minerals ( $k$ ).

The two lakes of Natron, defcribed by Father Sicard, are more interefing objects; they are fituated in the defart of Shayat, or St. Macarius, to the weft of the Delta. Their bed is a fort of natural trench, three or four leagues long, by a quarter wide, the bottom of which is folid and ftony. It is dry for nine months in the year, but, in winter, there oozes from the earth a water of a reddifh violet colour, which fills the lake to the height of five or fix feet; the return of the great heats caufing this to evaporate, there remains a bed of falt two feet thick, and very hard, which is broken with
(i) Each tribe has its particular road, to avoid difputes.
(k) Befides, there do not exift ten trees in this defert, and it feems incapable of producing any.
bars of iron. Thirty thoufand quintals are procured from them every year. This phanomenon, which indicates a foil impregnated with falt, is common throughout all Egypt. In every part of it, on digging, a brackifh water is found, containing natron, marine falt, and a little nitre. Even when the gardens are overflowed, for the fake of watering them, the furface of the ground, after the evaporation and abforption of the water, appears glazed over with falt; and this foil, like that of the whole continent of Africa and Arabia, feems either to be compofed of falt, or to produce it.

In the midft of thefe minerals of various qualities, in the midft of that fine and reddifh coloured fand peculiar to Africa, the earth of the valley through which the Nile flows, difcovers properties which prove it of a diftinct clafs. Its blackifh colour, its clayey, cementing quality, demonftrate its foreign origin; ard, in fact, it is brought by the river from the heart of Abyffinia; as if Na ture had actermined artfully to form an habitable inand in a country to which he had denied every thing. Without this fat
EGYPTAND SYRIA.
and light mud, Egypt never could have produced any thing; that alone feems to contain the feeds of vegetation and fecundity: and thefe again are owing to the river, by which it is depofited.

## C H A P. II.

## Of the Nile, and the enlargement of the

 Delta.THE whole phyfical and political exiftence of Egypt depends upon the Nile; that alone provides for the greatert neceffity of animal life, the want of water, fo frequently, and fo diftrefsfully, experienced in warm climates. The Nile alone, without the aid of rain, every where fupplies vegetation with moifture, the earth, during the three months inundation, imbibing a fufficient quantity of water for the reft of the year. Were it not for this overflowing, only a very fmall part of the country could be cultivated, and even that would require prodigious labour; it is with reafon, therefore, it has been ftiled the fource of plenty, of happinefs, and of life itfelf. Had Albuquerque, the Portuguefe, been able to execute his project, of turning its courfe from Ethiopia into the Red

Red Sea (l), this country, now fo rich, would have become a favage defert, furrounded by folitudes. If we reflect on the ufe man makes of his powers, we fhall fee little reafori to regret that Nature has granted him no more ?

It is with reafon, therefore, that the Egyptians have always profeffed, and ftill retain, a religious veneration for the Nile ( $m$ ); but an European muft be pardonied, if, on hearing them boaft its beauty; he fmiles at their ignorance. Never will thefe troubled and muddy waters have for him the charm of tranfparent fountains and limpid ftreams; never, except from fome extraordinary excitement, will a fwarthy Egyptiań woman, driping from thefe yellow and muddy waters, remind him of the bathing Naiads. For fix months of the year the water of the river is fo thick that it muft have time to fettle be-
(1) See Savary's L̇etters. T.
( $m$ ) They called it boly, blefed, facred; and, on the ap. pearance of the new waters, that is, on the opening of the canals, mothers are feen plunging their children into the current, from a belief that thefe waters have a purifying and divine virtue, fuch as the antients attributed to every river.

$$
\mathrm{C}_{2} \quad \text { fore }
$$

fore it can be drunk ( $n$ ): and, during the three months which precede the inundation, reduced to an inconfiderable depth, it grow's heated, becomes green, foetid, and full of worms, and it is neceffary to have recourfe to that which has been before drawn, and preferved in cifterns. At all times, people of delicacy take care to perfume it, and cool it by evaporation (0).

Travellers and Hiftorians have written fo much on the Nile, and its phenomena, that
(i) Bitter almonds are made ufe of, for this purpofe, with which the veffel is rubbed, and the water then becomes really light and good. But nothing but thirft, or prejudice, could induce any perfon to give it the preference to that of our fountains and large rivers, fuch as the Seine, and the Loire.
(0) Earthen veffels, unglazed, are kept carefully in every apartment, from whence the water continually tranfpires; this taanfiration produces the more coolnefs in proportion as it is more confiderable; for this reafon, thefe veffels are often fufpended in paffages where there are currents of air, and under the fhade of trees. In feveral parts of Syria they drink the water which has tranfpired; in Egypt they drink that which remains; befides, in no country is fo much water ufed. The firft thing an Egyptian does, on entering his houfe, is to lay hold of the kolla, (the pitcher of water) and take a hearty draught of it; and, thanks to their perpetual perfpiration, they feel no inconvenience from the practice.

I was at firft inclined to think the fubject exhaufted; but, as ideas vary refpecting the moft invariable facts; frequently, while there remains nothing new to fay, there is fill fomething to correct. Such appears to me to be the cafe, with fome opinions of M. Savary, in the Letters he has lately publifhed. The pofitions he endeavours to eftablifh concerning the enlargement, and rife of the Delta, are fo different from the conclufions I have deduced from the facts, and authorities he quotes that I think it my duty to fubmit our contradictory opinions to the tribunal of the public. This difcuffion feems to me the more neceffary, as a refidence of two years, upon the fpot, gives a weight to the teftimony of M. Savary, which would foon become authority: let us fate the queftions, and treat, in the firft place, of the extenfion, or enlargement of the Delta.

A Greek hiftorian, to whom we are indebted for almoft all our knowledge of ancient Egypt, and whofe authority every day's obfervation confirms, wrote thus, two-andtwenty centuries ago: "That part of Egypt "frequented by the Greeks, (the Delta) is an. " acquired land, the gift of the river, as is all C 3 " the
" the marihy country, along itṣ banks, for " three days fail up the Nile ( $p$ )."

The reafons he alledges in fupport of this affertion prove, that it was not founded on prejudice. "In fact," adds he, " the foil of "Egypt, which is a black and fat mud, is " abfolutely different, both from that of "Africa, which is a red fand, and that of "A Arabia, which iṣ clayey and ftoney. -This " mud is brought from Ethiopia, by the "Nile.-And the fhells found in the defert "fufficiently prove that the fea formerly
" extended farther into the country."
In admitting this encroachment of the river, fo conformable to probability, Herodotus has not determined its proportions. There M. Savary has imagined himfelf able to fupply; let us examine his reafoning.
"While it encreafed in height, Egypt (q), fays he, " augmented in length likewife; "t to prove which, among feveral facts which " hiftory has preferved, I fhall felect only "s one. During the reign of Pfammeticus,
(p) Herodot. lio. 1 I. p. 105. edit. Wenling.
(q) Sce Letcers on Egrypt, Vol. I. p. 17. of the Englifh Tranfation, Second Edit.
"the Milefians, with thirty fhips, landed at " the mouth of the Bolbitine branch, at " prefent the branch of Rofetta, where they " fortified themfelves, and built a city, "s which they called Metelis, (Strabo, lib. I7.) " now named Faoiia, but which, in the "Coptic vocabularies, is fill called Meffil. " This city, which was formerly a fea-port, " ftands, at prefent, nine leagues from the " fhore; which fpace the Delta has length" ened, from the age of Pfammeticus to the "prefent."

Nothing fo accurate at firft fight as this reafoning; but, on recurring to the original, M. Savary's authority, we find, that the principal fact is wanting; the following is a literal tranflation of the text of Strabo $(r)$.
"Beyond the Bolbitine mouth, is a low, "fandy cape, called the horn of the Lamb, " which ftretches pretty far (into the fea); " ${ }^{6}$ beyond that, the watch tower of Perfeus, " and the wall of the Milefians; for the "Milefians, in the reign of Cyaxares, King " of the Medes, cotemporary with Pfamme" ticus, King of Egypt, arriving at the Bol-
(r) Strabonis Geograph. Interp. Cafaubon. Edit. 8707, Lib. 17. p. $1153^{\circ}$
" bitine mouth, with thirty veffels, landed " there, and erected the work which bears " their name. Some time after, having ad"vanced into the Saitic Nome, and van"s quifhed Inârus, in a naval battle, they "f founded the city of Naucratis, a little above "Schedia. Beyond the wall of the Mile"fians, as we approach the Sebennytic " mouth, are lakes, one of which is named ${ }^{6}$ the Butic."

Such is the paffage of Strabo, relative to the Milefians; no mention is made of Metelis, of which not even the name is to be found in his whole work. Danville (s) has copied it from Ptolemy, who does not afcribe it to the Milefians: and unlefs M. Savary can prove the identity of Metelis, and the Milefian wall, by refearches made upon the fpot, his conclufions ought not to be admitted.

He is of opinion, too, that Homer affords him a fimilar teftimony in thofe paffages wherein he fpeaks of the diftance of the inle of Pharos from Egypt ( $t$ ); the reader mall
(s) See the excellent Memoir of Danville, on Egypt, in $4^{\text {to }} 17765$, p. 77.
(i) See Savary's Letters, p. I7.
judge,
judge, whether this is better founded. I quote the tranflation of Madame Dacier (u), which though lefs brilliant, is more literal than any other, and our bufinefs is with the literal. Menelaus is made to fpeak thus:
" In the Egyptian fea, oppofite the Nile, " there is a certain ifland, called Pharos; dif" tant from one of the mouths of that river * about as far as a veffel can fail in one day " before the wind."-and, foon after, Proteus fays to Menelaus: "Inflexible Deftiny does " not permit you to revifit your dear coun" try-until you fhall have returned again " into the river Egyptus, and offered un"blemifhed hecatombs to the immortals." " He faid," refumes Menelaus, " and my " heart was feized with grief and fadnefs, " becaufe this God commanded me to return " into the river Egyptus, the way to which " is difficult and dangerous."

From thefe paffages, and efpecially from the former, M. Savary would infer that the Pharos, which, at prefent joins the main land, was at that time very remote from it ; but when Homer fpeaks of the diftance of this

$$
\text { (u) Odyff, lib. } 4 .
$$

ifland,
ifland, he does not mean its diftance from the fhore oppofite, as that traveller has tranflated him, but from the land of Egypt, and the river Nile. In the fecond place, by a day's fail, we muft not underftand the indefinite fpace, which the veffels, or, more properly fpeaking, the boats, of the ancients could pafs through in a day; the Greeks ufed this expreffion to denote a certain fixed diftance of five hundred and forty ftadia. Herodotus ( $x$ ), who clearly afcertains this fact, gives us an example of it, when he fays that the Nile has encroached upon the fea the whole extent of country for three days fail up the river ; and the fixteen hundred and twenty ftadia, arifing from this computation, agree with the more accurate meafure of fifteen hundred ftadia, which he gives us, in another place, as the diftance of Heliopolis from the fea. Now, taking, with Danville, the five hundred and forty ftadia for twenty feven thoufand toifes, or near half a degree $(y)$, we fhall find this meafure is the diftance of the Pharos from the Nile ; it extends exactly to two-thirds of a league above Rofetta, a fituation where we
(x) Herod. lib. II. p. 106 and 107.
(j) This only I,300 toifes too much.
have reafon to place the city which gave mame to the Bolbitine mouth; and it is remarkable that it was this which the Greeks frequented, and where the Milefians landed, a century and a half after Homer. It is, therefore, far from being proved, that the increafe of the Delta, or of the Continent, was fo rapid as has been imagined; and, if we were difpofed to maintain it, we fhould fill have to explain how this fhore, which has not gained half a league from the days of Alexander, fhould have gained eleven in the far horter period from the time of Menelaus to that conqueror ( $z$ ).

A more fatisfactory eftimate of this encroachment might have been deduced from the dimenfions of Egypt, given by Herodotus: the following are his words. "The
(z) It may be objected Homer is not exact, when he fays the Pharos was oppofite the Nile; but, in his excufe, it may be urged, that when he calls Egypt the extremity of the world, he cannot mean to fpeak with precifion. In the fecond place, the Canopic branch ran formerly by the lakes, opening itfelf a paffage near Aboukir; and if, as the view of the country leads me to think, it paffed even to the weft of Aboukir, which muit have been an ifland, Homer, might fay, with reafon, that the Pharos was oppofite the Nile.
© breadth
" breadth of Egypt, along the fea coaft, from " the Gulph of Plinthine, to the Lake Ser" bonis, near Mount Cafius, is three thou" fand fix hundred ftadia; and its length, "from the fea to Heliopolis, fifteen hundred "ftadia."

Let us confine ourfelves to this laft meafure, which alone concerns the prefent difpute. Danville has proved, with that fagacity which was peculiar to him, that the ftadium of Herodotus is equivalent to between fifty and fifty-one French toifes; and taking it at the latter eftimation, the fifteen hundred ftadia are equal to feventy-fix thoufand toifes, which, after the rate of fifty-feven thoufand to a degree, gives one degree and near twenty minutes and a half. Now, from the aftronomical obfervations of Mr. Niebuhr, who travelled for the King of Denmark, in 1761 (a), the difference of latitude between Heliopolis, (now called Matarea) and the fea, being one degree twenty-nine minutes, at Damietta, and one degree twenty-four at Rofetta, there is a difference, on one fide, of
(a) See Travels in Arabia, by C. Niebuhr, in 4 to. tom. I. which muft be diftinguifhed from the Dffoription of Arabia, by the fame; 2 vol. in $4^{\text {to }}$.
three minutes and a half, or a league and a half encroachment; and eight minutes and a half, or three leagues and a half, on the other; that is to fay, the ancient fhore anfwers to eleven thoufand eight hundred toifes below Rofetta, which correfponds very nearly to the fenfe in which I underftand the paffage in Homer, while on the branch of Damietta it falls nine hundred and fifty toifes below that city. It is true, that in meafuring immediately on the map, the line of the fhore will be found about three leagues higher on the fide of Rofetta, and falls on Damietta itfelf, which is occafioned by the angle produced by the difference of longitude. But, in that cafe, Bolbitinum, mentioned by Herodotus, is not within its prefcribed limits; and, it is no longer true, that Bufiris (Aboufir) was fituated, as Herodotus has told us (b), in the middle of the Delta. It mult not be denied that the relations of the ancients, and the knowledge we have of the country, are not fufficiently precife exactly to determine the fucceffive encroachments.
(b) Lib. ii, p. 123.

In order to reafon accurately, refearches fimilar to thofe of the Comte de Choifeul; on the Meander ( $c$ ), would be neceffary; the ground fould be dug into, but fuch labours require means and opportunities which few travellers poffers; and a greater difficulty than all is, that the fandy foil, which forms the lower Delta, undergoes great changes every day. Thefe are not entirely owing to the Nile and the fea; the wind itfelf is a very powerful agent, which fometimes choaks up the canals, and drives back the river, as it has done at the Canopic branch. At others, it amaffes the fand, and buries the ruins, fo that their very remembrance is loft. Mr. Niebuhr relates a remarkable inftance of this. While he was at Rofetta, in 1762 , he difcovered by chance, under the fandy hillocks to the fouthward of that city, feveral ancient ruins, and, among others, twenty fine marble columns of Grecian workmanhip, without being able to learn any tradition even of the name of the place (d). This appears to me to have been the cafe with the
(c) See Voyage Pittorefque de la Cirèce, tom 2.
(d) This fituation agrees very well with that of Bolbitinum.
EGYPT AND SYRIA.
whole of the adjacent defert. This tract, formerly interfected by large canals, and filled with towns, prefents nothing but hillocks of a yellowifh fand, very fine, which the wind heaps up at the foot of every obftacle, and which frequently buries the palmtrees; wherefore, notwithftanding the labours of Danville, we cannot be certain he is right in the fituations he has affigned to feveral ancient places.
M. Savary has been much more exact in what heh as cited concerning one of the changes the Nile has undergone (e), by which it appears, that river formerly flowed entirely through Lybia, to the fouth of Memphis. But the relation of Herodotus himfelf, on whofe authority this depends, is not without difficulties. When that hiftorian, therefore, afferts, after the priefts of Heliopolis, that Menes, the firf king of Egypt, dammed up the elbow, formed by the river, two leagues and a quarter (one hundred ftadia) above Memphis ( $f$ ), and dug a new channel, to the eaftward of that city, does it not follow that Memphis was at that time fituated in

[^1]a barren defert, far diftant from any water? And how improbable is fuch an hypothefis! Can we literally believe in thefe immenfe works of Menes, who is fuppofed to have founded a city which is mentioned as exifting before his time; who is imagined to have dug canals and lakes, thrown briages over rivers, and crected palaces, towers and temples; and all this in the carlieft age of the nation, and the infancy of all the arts? Is not this Menes himfelf an hiftorical chi* mæra, and are not all the relations of the priefts, concerning this remote antiquity, wholly mythological ? I am inclined to think, therefore, that the turning the courfe of the Nile, by Menes, was no more than a diverfion of fome fmaller branch, to increafe the inundation of the Delta; and this conjecture feems the more probable, fince, notwithftanding the teftimony of Herodotus, this part of the valley, feen from the Pyramids, prefents nothing which could have been an obftruction to the courfe of the river. Befides, I cannot but think that M. Savary prefumes too much, when he makes the great channel, called babr bela ma, or river without water, terminate at ti,e mound before-
before-mentioned, above Memphis, and fuppofes it to have been the ancient bed of the Nile. Every traveller, cited by Danville, places that termination at the Lake of Fayoum, of which it appears a more natural continuation (a). To have proved this pofition, he fhould have vifited the places themfelves, and I never heard, at Cairo, that M. Savary advanced farther to the fouthward, than the Pyramids of Djiza. The formation of the Delta, which he deduces from this alteration, is equally repugnant to probability; for, in this fudden change, why fhould we imagine, the " enormous weight of the "waters, difcharging themfelves into this "gulph (b), would repel thofe of the fea?" The meeting of two maffes of fluid prom duces nothing but a mixture, from which a common level foon refults; if we imagine the water increafed, we can only expect that more land will be covered. It is true,
(a) In fact, we thall be more inclined, from an infpection of the map, to believe that this was the ancient courfe of the river: as for the petrefactions of mafts and whole veffels, mentioned by Father Sicard, thefe, to sain credit, ought to be attefted by more enlightened travellers than that miffionary.
(b) Letters on Egypt, vol. I. page 13. Vol. I.

D
M. Savary adds, " the fand and mud care " ried along by the Nile, were accumulated, "s and the Delta, very inconfiderable at firft, " rofe from the fea, by encroaching on its " limits." But, how does an ifland rife out of the fea? Running waters level much more than they heap up. This leads us to the queftion of the elevation.

## CHAP. III.

## Of the Rife of the Delta.

Herodotus; on whofe authority this hypothefis is founded, has not very fatisfactorily explained the fact, but he has a paffage of which M. Savary has availed himfelf to' draw certain pofitive conclufions; the following is his reafoning:
"In the time of Mœris, who lived five " hundred years before the Trojan war (a), " eight cubits were fufficient to overflow the "s whole Delta (Herodot. lib. 2.); fifteen " were neceffary in the age of Herodotus; " under the Roman empire, fixteen; under " the Arabs, feventeen : eighteen cubits is " the ftandard of abundance at this day; and " the Nile fometimes rifes to two-and-twenty. "Thus, in the fpace of 3284 years, we " fee the Delta has rifen fourteen cubits." True, if we admit the facts as they are ftated; but, on a careful examination, we
(a) Letter I. p. I3.
fhall find circumftances which invalidate both the premifes and conclufion. Let us firft cite the text of Herodotus :
"The Egyptian priefts," fays that author (b), "report that in the reign of King " Mœris, the Nile inundated the Delta, if it " only rofe to eight cubits. At prefent it does " not overflow it unlefs it attain fixteen, or " at leaft fifteen. Now, from the death of " Mceris to this time, nine hundred years " have not yet elapred."

Let us calculate from thefe materials.
From Mœris to Herodotus - 900 years, From Herodotus to the year 1777,
two thoufand two hundred and
thirty-feven, or if he will - 2,240

$$
\text { Total, }-\overline{3,140}
$$

Why this difference of one hundred and forty-four years excefs in the calculation of M. Savary? Why does he ufe other numbers than thofe of his author? But let us pals over the chronology.

In the time of Herodotus, fixteen cubits were neceflary, or at leaft fifteen, to overflow
(b) Lib. 2. p. Iog.
the Delta. The fame number was fufficient in the time of the Romans : fifteen and fixteen are invariably the meafure.
"Before the time of Petronius," fays Strabo (c), "plenty was not known in the Del" ta unlefs the Nile rofe to fourteen cubits. "But this Governor, obtaining by art what " nature denied, under his prefecture, plenty " has been known at twelve." The Arabs tell us the fame. A book in Arabic ftill exifts, which contains a table of all the rifings of the Nile, from the firft year of the Hegira (A.D. 622 ), down to the yèar 875 , (A. D. 1470); and this work afcertains that, in the latef times, as often as the Nile has fourteen cubits depth in its channel, there is a harveft fufficient for the year; that, if it reaches fixteen, there is fufficient for two years; but when it falls fhort of fourteen, or exceeds eighteen, there is famine; which correfponds exactly with the account of Herodotus. The book I quote is Arabic, but its contents are in every one's hands, who choofes to confult the word Nile in the Bibliotheque Orientale of D'Herbelot, or the Extracts from Kalkafendas, in Doctor Shaw's Travels.
(c) Lib. 1\%.

Nor is the meafure of thefe cubits uncertain. Fréret, Danville, and M. Bailli have proved that the Egyptian cubit, being invariably twenty-four digits, is equal to twenty and a half French inches (d); and the prefent cubit, called Draa mafri, is precifely divided into twenty-four digits, and amounts to twenty and a half of our inches. But the columns with which the rife of the Nile is meafured, have undergone an alteration which we muft not omit to notice.
"In the earlier ages, and while the Arabs "governed Egypt," fays Kalkafendas, "they " perceived that when the Nile did not at"t tain the ftandard neceffary for plenty, every s one was anxious to lay in fufficient pro"vifion for the year, which occafioned great or inconveniencies. Complaints of this were " made to the Calif Omar, who gave orders "to Amrou to enquire into the matter ; and "he reported as follows:-Having made ": the refearches you commanded, we have 46 found that when the Nile rifes to fourteen
(d) I have meafured feveral of them with a pied de Roi, flandard foot of copper; but I found they all varied from one to three lines. The Draa fambouli is of twenty-eight digits, or twenty-four inches, wanting one line.
"cubits, it produces a fufficient harvert for " the year; when it attains fixteen cubits, " we have plenty; but that at twelve and " eighteen dearth enfues. We alfo find that " the cuftom of making known the height "s of the waters by proclamation, is produc" tive of many irregularities, and is very "difadvantageous to commerce."

Omar, to remedy this abufe, was poffibly inclined to abolifh thefe proclamations; but that not being practicable, he devifed an expedient, fuggefted by Aboutaaleb, to produce the fame effect. Until then the meafuring column, called the Nilometer (e), had been divided into cubits of twenty-four digits each; Omar ordered this to be deftroyed, and fubftituting another in its place, which he erected in the ifland of Raouda, he commanded that the twelve lower cubits fhould confift of twenty-eight digits, inftead of twen-ty-four, while the upper remained of the ufual number; hence, when the rife of the Nile appeared, by the column, to be twelve cubits, it was really fourteen; for thefe twelve cubits being each four digits too long, there
(c). In Arabic, mekias, or meafure.

D 4
was an excefs of forty-eight digits, or twe cubits. Therefore, when fourteen cubits, the meafure of a fufficient harveft, were proclaimed, the inundation was really at the height for plenty, and the multitude, always cafily deceived by words, never fufpected the impofition. But this alteration could not efcape the Arabian hiftorians, who tell us the columns of the Said, or Upper Egypt, continued to be divided by twenty-four digits; that the height of eighteen cubits (old ftyle), was always injurious; and that nineteen was very rare, and almoft a prodigy $(f)$.

Nothing therefore is lefs certain than the progreflive changes here alledged, and which are rendered improbable by a known fact, which is, that in the long period of eighteen centuries, the rife of the Nile never varied. How does it happen then that it is fo different at prefent? How can it fo foon have altered
(f) Doctor Pocock, who has Ceveral good obfervations on the Nile, has entirely miftaken the meaning of the text of Kalkafendas; from an obfcure paffage he has been led to conclude, that the Nilometer, in the time of Oinar, was only twelve cubits, and this error has led him into a number of falfe conjectures. Pocock's Travels, vol. I. 2.9.
from fifteen to twenty-two cubits, fince the year one thoufand four hundred and feventythree? This problem is, in my opinion, eafy of folution; not from phyfical changes, but from other circumftances. It is not the Nile but the column and meafures which have varied. The myftery in which the Mekias is enveloped by the Turks, has prevented the greater part of travellers from difcovering the truth; but Pococke, who obtained a fight of it in 1539 , relates that the fcale of cubits was inaccurate and unequal. He even obferves it appeared to him to be new, a circumftance which may lead us to imagine the Turks, in imitation of Omar, have made fome recent alteration. In thort, there is a fact which removes every doubt, for M. Niebuhr (g), whom the world will not eafily fufpect of falfehood or miftake, having meafured, in 1762 , the marks of the inundation, on a wall at Djiza (Giza), found that, on the firft of June, the Nile had fallen twenty-four French feet. But twenty-four-feet, reduced to cubits, at the rate of twenty inches and a half each, give precifely fourteen cubits one inch. It is true there

[^2]ftill remains eighteen days decreafe; but by eftimating that at half a cubit, agreeable to what has been obferved by Pococke (b), we have only fourteen cubits and a half, which correfponds exactly with the antient calcuIation.

There is another affertion of M. Savary's to which, likewife, I cannot fubfcribe without refriction.-" Since I have been in Egypt," fays he, Letter I. P. I 5, "I have twice " made the tour of the Delta; I have even " croffed it by the canal of Menouf. The " river, though full to the brim, in the great "branches of Rofetta and Damietta, and " thofe which run through the interior parts " of the country; only overflowed the " land where it lay low, or where banks had " been raifed to ftop its waters, and throw "them over the rice fields." Hence he concludes, " that the prefent pofition of the "Delta is the beft poffible for agriculture; " fince, ceafing to be overflowed, this ifland " has a yearly gain of the three months dur-
(b) The 17 th of May, eleven pikes (or cubits) of the column were above the water, and the $3^{\text {d }}$ of June eleven and a half: in feventeen days therefore there was a difference of half a cubit. Pocock's Travels, vol, I. p. 256.
" ing
"ing which the Thebais is inundated." It muft be confeffed that nothing can be more extraordinary than this gain. If the Delta has gained by being no longer overflowed, why was the inundation at all times fo anxioufly defired? "This is fupplied by ss the banks." But the Delta muft not be compared to the marrhes of the Seine. The water is only on a level with the land towards the fea; every where elfe it is below the level, and the fhore rifes as you afcend the river. In fhort, if I may give my teftimony, I muft declare that, when I went from Cairo to Rofetta, by the canal of Menouf, I obferved, on the 26 th, 27 th, and 28 th of September, 1783 , that, notwithftanding the waters had decreafed upwards of a fortnight, the country was ftill partly under water, and fill difcovered, in the places left dry, the traces of the inundation. What M. Savary obferved can therefore only be attributed to an indifferent inundation; nor ought we to imagine, either that the rifing has changed the fate of the Delta (i), or that the Egyptians can have no water but
(i) The bed of the river itfelf has rifen, like the reft of the country.
what
what is procured by artificial means, as expenfive as infufficient ( $k$ ).

It now remains for us to explain the difficulty of the eight cubits in the time of $\mathrm{M} œ-$ ris; and I cannot help thinking this arifes from caufes of the fame nature. It appears that, fubfequent to this Prince, an alteration took place in the meafures of the country, and one cubit was made into two. This conjecture is the more probable fince, in the time of Mœris, Egypt was not united into one kingdom; there were at leaft three between Afouan and the fea. Sefoftris, who was pofterior to Mœris, conquered and united them. But, after this Prince, they were again divided; and this divifion fubfifted till the reign of Pfammeticus. Such a change in the meafures of Egypt accords perfectly with the character of Sefoftris, who effected a general revolution in the government, eftablifhed new laws, and a new adminiftration, raifed mounds
(k) In the lower Delta, the country is watered by the means of fingle wheels, becaufe the water is on a level with the land; but in the upper Deita, it is neceffary to apply chain-buckets to the wheels, or raife the water by moveable pumps. There is a great number on the road from Rofetta to Cairo, and it is fufficiently evident this laborious method produces no great effect.
and caufeways, on which to build villages and towns, and dug fo great a number of canals, according to Herodotus ( $l$ ), that the Egyptians laid afide ufing waggons, which they had till then employed.

It will be proper likewife to obferve that the degrees of inundation are not the fame through all Egypt. On the contrary, a gradual diminution obtains as the river approaches the fea. At Afouan (Syene), the overflow is more confiderable, by one fixth, than at Grand Cairo; and, when the depth of water, at this latter city, is twenty-feven feet, it is fcarcely four at Rofetta and Damietta. The reafon of this is, that befides the quantity of water abforbed by the grounds, as it flows, the river, confined in one fingle bed, and within a narrow valley, rifes higher in the upper country; whereas, when it has paffed Cairo, being no longer obftructed by the mountains, and feparating into a thoufand
(l) Herodotus, lib. 2. This circumftance has greatly embarraffed our modern chronologifts, who place Sefoftris before Mofes, in whofe time waggons ftill fubfifted in Egypt ; but it is not the fault of Herodotus if his fyftem of chronology, the bett of all antiquity, has not been underftood.

branches,

branches, it neceffarily lofes in depth what it acquires in furface.

The reader will conclude, doubtlefs, from what I have faid, that writers have flattered themfelves too much in fuppofing they could fix the precife limits of the enlargement and rife of the Delta. But, though I would reject all illufory circumftances, I am far from denying the fact to be well founded; it is too plain from reafon, and an examination of the country. The rife of the ground appears to me demonftrated by an obfervation on which little ftrefs has been laid. In going from Rofetta to Cairo, when the waters are low, as in the month of March, we may remark, as we go up the river, that the fhore rifes gradually above the water; fo that, if it overflowed two feet at Rofetta, it overflows from three to four at Faoua, and upwards of twelve at Cairo ( m ). Now, by reafoning from this fact, we may deduce the proof of an increafe by fediment; for the layer of mud being in proportion to the thicknefs of the fheets of
(m) It would be curious to afcertain in what proportion it continues up to Afouan. Some Copts whom I have interrogated on the fubject, affured me that it was much higher through all the Said than at Cairo.
water by which it is depofited, muft be more or lefs confiderable as thefe are of a greater or lefs depth; and we have feen that the like gradation is obfervable from Afouan to the fea.

On the other hand, the increare of the Delta manifefts itfelf in a ftriking manner, by the form of Egypt, along the Mediterranean. When we confider its figure on the map, we perceive, that the country, which is in the line of the river, and evidently formed of foreign materials, has affumed a femi-circular Chape, and that the fhores of Arabia and Africa, on each fide, have a direction towards the bottom of the Delta, which manifeftly difcovers this country was formerly agulph, that, in time, has been filled up.

This accumulation is common to all rivers, and is to be accounted for in the fame manner in all: the rain water, and the fnow, defcending from the mountains into the vallies, hurry inceffantly along with them the earth they wafh away in their defcent. The heavier parts, fuch as pebbles and fands, foon ftop, unlefs forced along by a rapid current. But when the waters meet only with a fine and
light earth, they carry away large quantities with the greateft facility. The Nile meeting with fuch a kind of earth, in Abyffinia, and the interior parts of Africa, its waters are loaded, and its bed filled with it; nay, it is frequently fo embarraffed with this fediment, as to be fltaigthened in its courfe. But, when the inundation reftores to it its natural energy, it drives the mud that has accumulated towards the fea, at the fame time that it brings down more for the enfuing feafon; and this, arrived at its mouth, heaps up, and forms fhoals, where the declivity does not allow fufficient action to the current, and where the fea produces an equilibrium of refiftance. The ftagnation, which follows, occafions the groffer particles, which till then had floated, to fink, and this takes place more particularly in thofe places where there is leaft motion, as toward the fhores, till the fides become gradually enriched by the fpoils of the upper country, and of the Delta itfelf; for, if the Nile takes from Abyffinia, to give to the Thebais, it likewife takes from the Thebais to give to the Delta, and from the Delta to carry to the fea. Wherever its waters have a current, it defpoils the fame
territory
territory it enriches. As we afcend toward Cairo, when the river is low, we may obferve on each fide the banks worn fteep, and crumbling in large flakes. The Nile, which undermines them, depriving their light earth of fupport, it falls into the bed of the river, for when the water is high, the earth imbibes it ; and when the fun and drought return, cracks and moulders away in great flakes, which are hurried along by the Nile. Thus are feveral canals choaked up, and others enlarged, while the bed of the river continually rifes. This is the cafe with the moft frequented of thefe at prefent, I mean that which runs from Nadir to the branch of Damietta. This canal, at firft dug by the hand of man, is in feveral places become as wide as the Seine. It fupplies even the mother branch, which runs from Batn-el-Bakara, to Nadir, and which is filling up fo faft, that if it be not fpeedily cleanfed, it will foon become firm ground: the reafon of this is, that the river tends perpetually to the right line, in which it has the greatef force; wherefore it has preferred the Bolbitine, which was at firt but an artificial canal, to the Canopic branch ( $n$ ).
(n) Herolot. lib, Ifi

Vol. I.
E
From

From this mechanifm of the river, it further refults that the principal encroachment muft be formed in the line of the moft confiderable mouths, and of the ftrongeft current ; and the afpect of the country is conformable with this theory. If we calt our eye on the map, we fhall perceive that the projection of the lands is chiefly in the direction of the branches of Rofetta and Damietta. The lateral and intermediate country continues to be lakes and moraffes unfeparated, between the Continent and the fea, becaufe the fmall canals, which terminate there, have been able to produce only an imperfect accumulation; for this mud and fediment caure a very flow rife: nor would this indeed ever fuffice to elevate them above the water, without the addition of a more powerful agent, which is the fea, that perpetually raifes the level of the low banks above its own waters. For the waves, beating on the fhore, repel the fand and mud which they meet; their dafhing afterwards accumulates that Render bank, and gives it an elevation which it never would have attained in ftill waters. The truth of this is manifeft to every perfon who walks on the edge of the fea, on a low and changing thore; but the fea muft have no
EGYPT AND SYRIA.
current on the beach: for if it lofes in there parts where it is in eddy, it gains in thofe where it is in motion. When the fhoals are at length formed on the level of the water, human induftry foon endeavours their improvement. But inftead of faying it raifes their level above the water, we ought to fay, it finks the level of the water, fince the canals which are excavated collect, in narrow channels, thofe waters which were fpread over a great extent of ground (0).

There remain unqueftionably many obfervations to make, or to reconfider, in this country; but, as I have already faid, they are attended with great difficulties, to overcome which, much time, expence, and addrefs are neceffary; and in many refpects, the acceffary obftacles are even more infuperable than the fundamental. Baron de Tott experienced the truth of this very lately, with refpect to the Nilometer. In vain did he endeavour to feduce the guardians; in vain did he give
(0) The great number of canals may be the caufe of variation in the degrees of the inundation; for if there be many, and thofe deep ones, the water will run off quicker, and rife lefs; if there be few, and thore thallow, the contrary will happen.
and promife fequins to the cryers, in order to obtain the true heights of the Nile; their contradictory reports proved either their deceit, or their univerfal ignorance. It will be obferved, perhaps, that meafuring columns might be erected in private houfes; but fuch experiments, fimple in theory, are impofible in practice : they would expofe to too ferious dangers. Even the curiofity natural to the Franks, every day renders the Turks more jealous. They are perfuaded we have formed defigns on their country; and the invafions of the Ruffians, added to popular prejudice, ftrengthens their fufpicions. It is generally believed, at this moment, throughout their empire, that the predicted hour is arrived, when the power and religion of the Muffulmen are about to be deftroyed, and that the Yellore King is coming to eftablifh a new empire, \&cc, \&c. But it is time to refume our fubject.

I pafs flightly over the feafon ( $p$ ) of the inundation, which is fo well known; its
( $p$ ) It is fixed precifely to the rith of June, but it would be difificult to determine the firlt inftant of it fo evactly as the Copts wifl to do.
infenfible increafe, fo unlike the fudden fwelling of our rivers; its diverfities, according to which it is fometimes feeble, fometimes ftrong, and fometimes even entirely fails; a very rare cafe, but of which two or three inftances have happened. All thefe particulars are too well known to be repeated; it is known likewife that the caufes of this phænomenon, which were an enigma to the ancients ( $q$ ), are no longer fo to the Europeans. Since travellers have informed them that Abyffinia and the adjacent part of Africa, are deluged with rain in May, June, and July, they have, with reafon, concluded, that it mult be thefe rains, which, by the fituation of the country, abounding with a thoufand rivers, collect together in the fame valley, direct their courfe to diftant mores, and prefent the ftupendous fight of a mafs of water, which employs three months in draining off. We leave to Grecian naturalifs their action of the northerly or Etefian winds, which, by a pretended preffure, ftayed the courfe of the river ; it is aftonifhing
(q) Democritus, however, had conjectured the true caure. See Diodorus Siculus, lib. Ir.
that even they fhould ever have admitted this explication, for the wind, acting only on the furface of the water, can never prevent the inferior mafs from obeying the laws of gravity. In vain have fome moderns alledged the example of the Mediterranean, which, from the continuance of eafterly winds, leaves dry the coaft of Syria, a foot, or a foot and a half, to gain as much on thofe of Spain and Provence, on which wefterly winds have a contrary effect ; there is no comparifon to be made between a fea without declivity, and a river; between the vaft furface of the Me diterranean, and that of the Nile; between twenty-fix feet and eighteen inches.

## C H A P. IV.

## Of the Winds and their Pbanomena.

THE northerly winds, which blow at ftated periods every year, anfwer a more certain and effectual purpofe; that of carrying into Abyffinia a prodigious quantity of clouds. From the month of April to July we fee thefe inceffantly afcending towards the fouth, and might be fometimes tempted to expect rain from them; but this parched country requefts in vain from them a benefaction which is to return upon it under a different form. Never does it rain in the Delta in fummer, and but rarely, and in fmall quantities, during the whole courfe of the year. The year 1761, obierved by M. Niebuhr, was an extraordinary cafe, which is ftill frequently mentioned. The accidents occafioned by the rains in Lower Egypt, in which a number of villages, built with earth, crumbled to pieces, afford a fufficient proof that this abundance of water is there looked upon as very rare. It muft be obferved, likewife, that it rains

$$
\mathrm{E}_{4} \quad \text { ftil! }
$$

ftill lefs as you afcend towards the Said. Thus, rain is more frequent at Alexandria and Rofetta than at Cairo, and at Cairo than at Miniah, and is almoft a prodigy at Djirdja. As for us, the inhabitants of humid countries, we cannot conceive how it is poffible for a country to fubfift without rain (a); but in Egypt, befides the quantity of water which the earth imbibes at the inundation, the dews which fall in the fummer might fuffice for vegetation. The Melons, called Paftekes, afford a remarkable proof of this; for though they have frequently nothing under them but a dry duft, yet their leaves are always frefh. Thefe dews, as well as the rains, are more copious towards the fea, and lefs confiderable in proportion to their diftance from it; but differ from them by being more abundant in fummer than in winter. At Alexandria, after funfer, in the month of A pril, the clothes expofed to the air,
(a) When rain falls in Egypt and in Paleftine, there is a eeneral joy among the people: they affemble together in the ftrcets, they fing, are all in motion, and Ahout, ya allab! ya mobarck! that is to ray, U God! O Bleffed! \&ic.
and the terraces are foaked with them, as if it had rained. Like the rains, again, thefe dews are more or lefs heavy, according to the prevailing wind. The foutherly and the fouth-eafterly produce none ; the north wind a great deal, and the wefterly fill more. Thefe varieties are eafily explained, by obferving that the two former proceed from the deferts of Africa and Arabia, which afford not a drop of water; that the northerly and wefterly winds, on the contrary, convey over Egypt the vapours from the Mediterranean, which the firf croffes, and the other traverfes lengthways. I find, even, on comparing my obfervations on this fubject in Provence, in Syria, and in Egypt, with thofe of M. Niebuhr in Arabia and at Bombay, that this relative pofition of the feas and continents is the caufe of the various qualities of one and the fame wind, which produces rain in one country, while it is invariably dry in another; a remark which deranges not a little the fyltems of both ancient and modern aftrologers refpecting the influence of the planets.

Another phænomenon, no lefs remarkable, is the periodical return of each wind, and its appropriation, fo to fpeak, to certain feafons
fons of the year. Egypt and Syria prefent, in this refpect, a regularity worthy of attention.

In Egypt, when the fun approaches the tropic of Cancer, the winds, which before blew from the eaft, change to the north, and become conftant in that point. In June they always blow from the north and north-weft; this, therefore, is the proper feafon for going up the Levant, and a veffel may expect to anchor in Cyprus, or at Alexandria, the fourteenth, nay, fometimes the eleventh day, after her departure from Marfeilies. The winds continue northerly in July, but vary fometimes toward the weft, and fometimes toward the eaft. About the end of July, during all the month of Auguft, and half of September, they remain conftantly in the north, and are moderate; brifker in the day, however, and weaker at night. At this period an univerfal calm reigns on the Mediterranean, fo that fhips would be feventy or eighty days in returning to France.

Towards the end of September, when the fun repaffes the line, the winds return to the eaft ; and, though not fixed, blow more regularly from that than any other point, except the north. Veffels avail themfelves
of this feafon, which lafts all October and part of November, to return to Europe ; and the run to Marfeilles is from thirty to five-and-thirty days. As the fun approaches the other tropic, the winds become more variable and more tempeftuous; they moft ufually blow from the north, the north-weft, and weft, in which points they continue during the months of December, January, and February, which is the winter feafon in Egypt, as well as with us. The vapours of the Mediterranean, condenfed by the coldnefs of the atmofphere, defcend in mifts and rains. Towards the end of February and in March, when the fun returns towards the equator, the winds are more frequently foutherly than at any other feafon. During this laft month, and that of April, the fouth-eafterly, fouth, and fouth-wefterly winds prevail; and at times the weft, north, and eaft ; the latter of which becomes the moft prevalent about the end of April ; and during May it divides with the north the empire of the fea, and renders the paffage to France fill more expeditious than at the other equinox.

## Of the bot Wind, or Kamfin.

The foutherly winds, of which I have been fpeaking, are known in Egypt by the general name of winds of fifty (days) (a); not that they laft fifty days without intermiffion, but becaufe they prevail more frequently in the fifty days preceding and following the equinox. Travellers have mentioned them under the denomination of poifonous winds (b); or, more correctly, bot winds of the defert. Such, in fact, is their quality; and their heat is fometimes fo exceffive, that it is difficult to form any idea of its violence without having experienced it ; but it may be compared to the heat cf a large oven at the moment of drawing out the bread. When thefe winds begin to blow, the atmofphere
(a) In Arabic, kamfin; but the $k$ reprefents the Spanifh jota, or the German ch.
(b) The Arabs of the defert call them femoum, or poifon; and the Turks framyela, or wind of Syria, from which is formed the Samiel wind. Baron de Tott tranflates this word the wind of Damajeus, which is the capital of Syria. Sce alfo Note (c) to Ch pter 1. of our author's account of Syria, where ol Sjum is faid to be the Arabic name of the city of Damafcus. T.
affumes an alarming afpect. The $\mathrm{k} y$, at other times fo clear, in this climate, becomes dark and heavy; the fun lofes his fplendour, and appears of a violet colour. The air is not cloudy, but grey and thick, and is, in fact, filled with an extremely fubtle dutt, which penetrates every where. This wind, always light and rapid, is not at firft remarkably hot, but it ncreafes in heat in proportion as it continues. All animated bodies foon difcover it, by the change it produces in them. The lungs, which a too rarefied air no longer expands, are contracted, and become painful. Refpiration is fhort and difficult, the fkin parched and dry, and the body confumed by an internal heat. In vain is recourfe had to large draughts of water; nothing can reftore perfiration. In vain is coolnefs fought for; all bodies in which it is ufual to find it, deceive the hand that touches them. Marble, iron, water, notwithftanding the fun no longer appears, are hot. The ftreets are deferted, and the dead filence of night reigns every where. The inhabitants of towns and villages fhut themfelves up in their houfes, and thofe of the defert in their tents, or in wells dug in the earth, where they
they wait the termination of this deftructive heat. It ufually lafts three days, but if it exceeds that time it becomes infupportable. Woe to the traveller whom this wind furprizes remote from thelter; he muft fuffer all its horrible effects, which fometimes are mortal. The danger is mof imminent when it blows in fqualls, for then the rapidity of the wind encreafes the heat to fuch a degree, as to caufe fudden death. This death is a real fuffocation; the lungs being empty, are convulfed,' the circulation difordered, and the whole mafs of blood driven by the heart towards the head and breaft ; whence that hæmorrhage at the nofe and mouth which happens after death. This wind is efpecially deffructive to perfons of a plethoric habit, and thofe in whom fatigue has deftroyed the tone of the mufcles and the veffels. The corpfe remains a long time warm, fwells, turns blue, and is eafily feparated; all which are figns of that putrid fermentation which takes place in animal bodies when the humours become ftagnant. Thefe accidents are to be avoided, by ftopping the nofe and mouth with handkerchiefs; an efficacious method likewife is that practifed by the camels, which bury their noles
nofes in the fand, and keep them there till the fquall is over.

Another quality of this wind is its extreme aridity; which is fuch, that water fprinkled on the floor evaporates in a few minutes; by this extreme drynefs, it withers and ftrips all the plants, and, by exhaling too fuddenly the emanations from animal bodies, crifps the ikin, clofes the pores, and caufes that feverifh heat which is the invariable effect of fuppreffed perfpiration.

Thefe hot winds are not peculiar to Egypt; they blow likewife in Syria; more frequently, however, near the fea, and in the defert, than on the mountains. M. Niebuhr met with them in Arabia, at Bombay, and in the Diarbekir: they are alfo known in Perfia, in the reft of Africa, and even in Spain; every where their effects are fimilar, but their direction varies according to the fituation of the country. In Egypt, the moft violent proceed from the fouth-fouth-weft; at Mecca, from the eaft; at Surat, from the north; at Baffora, from the north-weft; from the weft at Bagdad; and in Syria from the fouth-eaf. Thefe varieties, which feem embarraffing at firft fight, on reflection, fur-
nifh the means of folving the enigma. We find, on examination, that thefe winds always proceed from defert continents; and, in fact, it is natural that the air which covers the immenfe plains of Lybia and Arabia, meeting there neither with rivulets, nor lakes, nor forefts, but fcorched by the rays of a burning fun, and the reflection of the fand, mould acquire a prodigious degree of heat and aridity; and if any caufe intervenes to fet it in motion, it cannot but carry with it the deftructive qualities it has imbibed; it is fo true that thefe qualities are owing to the action of the fun upon the fands that thefe fame winds produce not the fame effects at every feafon. In Egypt, for example, I am affured, that the foutheriy winds in December and January are as cold as thofe from the north; and the reafon of this is, that the fun, having reached the fouthern tropic, no longer burns up the northern parts of Africa, and that Abyfinia, which is extremely mountainous, is covered with fnow. The fun muft approach the equator to produce thefe phænomena. From a fimilar reafon, the fouth wind has much lefs effect in Cyprus, where it arrives cooled by the vapours of the Mediterranean.

That from the north poffeffes its characterific qualities in this inland, where the inhabitants complain that its heat is infupportable in fummer, while it is freezing cold in winter; which evidently arifes from the ftate of Afia Minor, which in fummer is burnt up, and in winter covered with ice. In fact, this fubject offers a multitude of problems, calculated to excite the curiofity of the naturalift. Would it not, for inftance, be interefting to know,

Ift, Whence proceeds this connection of the feafons, and the progrefs of the fun, with the various winds, and the points from whence they blow?

2dly, Why, throughout the Mediterranean, does the wind moft frequently blow from the north, infomuch, that we may fay it continues in that point nine months out of twelve?

3dly, Why do the eaferly winds return fo regularly after the equinoxes; and why are the winds, in general, higher at this period?

4thly, Why are the dews more abundant in fummer than in winter; and why, rince the clouds are caufed by the evaporation of the fea, and that evaporation is more copious

Vol. I.
fummer than in winter, why, notwithftanding, are there more clouds in winter than in fummer?
$5^{\text {thly, In }}$ fhort, why is rain fo rare in Egypt, and why do the clouds rather collect in Abyffinia?

But it is time to complete our obfervations on the phyfical fate of this country.

## C H A P. V.

## Of the Climate and Air.

THE climate of Egypt is, with reafon, efteemed extremely hot, fince in July and Auguft, Reaumur's thermometer ftands, in the moft temperate apartments, at 24 and 25 degrees above the freezing point. In the Said, it rifes fill higher, though I can affert nothing precife in that refpect. The height of the fun, which, in fummer, nearly approaches the zenith, is doubtlefs a primary caufe of this heat; but when we confider that, in other countries, under the fame latitude, the heat is lefs, we may conclude there exifts a fecondary caufe, equally powerful with the former, and this, perhaps, is the country being fo little elevated above the level of the fea. On this account, two feafons only fhould be diftinguifhed in Egypt; the fpring and fummer, that is to fay, the cool feafon, and the hot. The latter continues from March to November; and even from the end of February, the fun is not fupportable, for an European, at nine o'clock in the morning. During the
whole of this feafon the air is inflamed, the fky fparkling, and the heat oppreffive to all unaccuftomed to it. The body fweats profufely, even under the lighteft drefs, and in a ftate of the moft profound repofe. And this perfiration becomes fo neceffary, that, the flighteft fuppreffion of it is a ferious malady; infomuch, that, the ordinary falute "How do " you do?" ought in Egypt to be: "How " do you fweat?" The departure of the fun tempers, in forme degree, thefe heats. The vapours from the earth foaked by the Nile, and thofe brought by the weft, and northweft winds, abforbing the fire difperfed throughout the atmofphere, produce an agreeable frefhnefs, and even piercing cold, if we may credit the natives, and fome European merchants; but the Egyptians, almoft naked, and accuftomed to perfire, thiver at the leant coolnefs. The thermometer, which, at the loweft, in the month of February, ftands at the eighth or ninth degree of Reaumur's fcale, above the freezing point, enables us to determine with certainty, and we may pronounce, that fnow, and hail, are phœnomena which no Egyptian has icen in fifty years. As for our merchants, their fenfibility is owing to their impro-
improper ufe of furs, which is carried fo far, that, in winter, they have frequently two or three coverings of foxes-fkin, and, even in fummer, retain the ermine or petit gris; in excufe for this, they plead the chillinefs they experience in the fhade, as an indifpenfible reafon; and in fact, the northerly and wefterly currents of air; which almoft continually prevail, caufe a pretty confiderable coolnefs out of the fun ; but the fecret and real reafon is, that the pelifie is to be confidered as the lace of Turkey, the favourite object of luxury ; it is the fign of opulence, and the etiquette of dignity; for the inveftiture of important offices is always accompanied with the prefent of a peliffe, as if they were to fay of him to whom they give it, he is now arrived at fo great eminence, be need concern himfelf with nothing, but peripire at his eafe.

It might naturally be imagined that Egypt, from thefe heats, and its wet and marfhy condition for three months, muft be an unhealthy country; this was my firft idea on my arrival there; and, when I beheld, at Cairo, the houfes of our merchants ranged along the Kalidj, where the water ftagnates till the month of April, I made no doubt that
the exhalations thence arifing, muft caufe many maladies; but experience proves the fallacy of this theory; the vapours of the ftagnant waters, fo fatal in Cyprus, and Alexandretta, have not the fame effect in Egypt. This appears to me to be owing to the natural drynefs of the air, to the proximity of Africa, and Arabia, which inceffantly draw off the humidity, and the perpetual currents of wind, which meet with no obftacle. This aridity is fuch, that flefh meat expofed, even in fummer, to the north wind, does not putrefy, but dries up, and becomes hard as wood. In the deferts, dead carcafes are found dried in this manner, which are fo light, that a man may eafily lift with one hand the entire body of a camel. (a)

The air, befides poffeffing this drying quality, appears to be frongly impregnated with falts, the proofs of which are every where apparent. The ftones are corroded by natrum, and in moift places, long cryftallizations of it are to be found, which might be taken for
(a) It mu? be remarked, however, that the air near the fea is infinitely lefs dry than higher up the country: 'Thus, at Alcxandisa, and Rofetta, iron cannot be expofed four-and-iweniy hours to the air, without rufing.
falt-petre. The wall of the Jefuits garden, at Cairo, built with earth and bricks, is every where covered with a cruft of this natrum, as thick as a crown-piece ; and when this garden has been overflowed by the waters of the Kalidj, the ground, after they have drained off, appears fparkling on every fide with white cryftals, which certainly were not brought thither by the water, fince it fhows no fign of falt, either to the tafte, or in diftillation.

It is no doubt, this property of the air, and the earth, which, added to the heat, gives vegetation an activity almoft incredible in our cold climates. Wherever plants have water, the rapidity of their growth is prodigious. Whoever has travelled to Cairo, or Rofetta, knows, that the fpecies of gourd called kara, will, in twenty-four hours, fend out hoots near four inches long; but it is worthy obfervation, that this foil appears extremely unfavourable to all exotics. Foreign plants degenerate there rapidly: the truth of which remark is proved by daily experience. Our merchants are obliged every year to renew their feeds, and to fend to Malta for their cauliflowers, beetroot, carrots, and fallify: thefe, when lown, fucceed at firft very well; but if you again

72 TRAVELSIN
fow the feed they produce, the plants run up tall and weak. The fame happens to apricots, pears, and peaches, when tranfported to Rofetta. The vegetation of this earth feems too violent for fpungy and pulpy fruits, which fhould be gradually accuftomed, by the arts of culture, to the foil and climate.

## C H A P. VI.

## Of the various Inbabitants of Egypt.

AMID thofe revolutions which all nations have experienced, there are few countries which have preferved their original and primitive inhabitants pure and unmixed. Throughout the world, the fame cupidity which leads individuals to encroach on each other's property, has excited nations one againft another ; and the confequence of this oppofition of interefts and powers, has been to introduce into ftates a foreign conqueror, who, now an infolent ufurper, has defpoiled the vanquithed nation of the domain granted them by nature; and now, a more timid or more civilized inguader, has contented himfelf with participating in advantages refufed him by his native foil. Here we fee various races of inhabitants fettling themfelves in the fame country, who, adopting the fame manners and interefts, have fometimes united in the moft intimate alliances ; but more frequently
we find them feparated by political or religious prejudices, and remaining perpetually diftinct. In the firft cafe, the different races, lofing by the mixture their diftinguifing characters, have formed an homogeneous people, among whom it is impoffible to difcover any traces of the revolution. In the fecond, living diftinct, their perpetuated differences are become a monument which has outlived ages, and which in fome cafes may fupply the filence of hiftory.

Such is the cale with Egypt: deprived three-and-twenty centuries ago of her natural proprietors, fhe has feen her fertile fields fucceffively a prey to the Perfians, the Macedonians, the Romans, the Greeks, the Arabs, the Georgians, and, at length, the race of Tartars, diftinguifhed by the name of Ottoman Turks. Among fo many nations, feveral of them have left veftiges of their tranfient poffeffion; but as they have been blended in fucceffion, they have been fo confounded as to render it very difficult to difcriminate their refpective characters. We may, however, fti'l diftinguifh the inhabitants of Egypt into four principal races, of different origin.

The firft, and moft generally difperfed, is that of the Arabs, which may be divided into three claffes. Firft, the poftcrity of thofe who, on the conqueft of Egypt by Amrou, in the year 640, haftened from the Hedjaz, and every part of Arabia, to fettle in this country, fo juftly celebrated for its fertility. Every one was anxious to poffers lands in it, and the Delta was prefently filled with foreigners, to the prejudice of the vanquifhed Greeks. This firft race is preferved in the prefent clafs of fellahs, or hufbandmen, and artizans, who ftill retain the characteriftic features of their anceftors, but are taller and ftronger made, the natural effect of a more plentiful nourifhment than that of the deferts. In general, the Egyptian peafants reach the height of five fect four inches, and many among them attain to five feet fix or feven. They are mufcular, without being flefhy and corpulent, as men will be who are hardened to fatigue. Their fkin , tanned by the fun, is almof black, but theircountenances have nothing difagreeable. The greateft part of them have heads of a fine oval, large and projecting foreheads, and, under a dark eyebrow, a black, funken, but brilliant eye, the
the nofe large, but not aquiline, well-fhaped mouths, and, without exception, fine teeth. The inhabitants of the great towns, more motley, have a lefs uniform and marked phyfiognomy. Thofe of the villages, on the contrary, forming no alliances but in their own families, have more general and more conftant characteriftics, and fomething of ferocity in their air, which originates in the paffions of a mind continually foured by the perpetual war and tyranny which furround them.

A fecond clafs of Arabs is that of the Africans, or Occidentals (a), who have arrived at different periods, and under different chiefs, and united themfelves to the former; like them, they are defcended from the Muffulmen conquerors, who expelled the Greeks from Mauritania; like them, they exercife agriculture and trades; but they are more efpecially numerous in the Said, where they have villages, and even diftinct fovereigns of their own.

The third clafs is that of the Bedouins, or inhabitants of the deferts ( $b$ ), known to
(a) In Arahic magarle, the plural of magrebi, weftern.
(b) In Arabic bidani, formed of bid, defert, country without habitations.
the ancients by the name of Scenites, that is, dwellers in tents. Some of thefe, difperfed in families, inhabit the rocks, caverns, ruins, and fequeftered places where there is water; others, united in tribes, encamp under low and fmoaky tents, and pafs their lives in perpetual journeyings, fometimes in the defert, fometimes on the banks of the river; having no other attachment to the foil than what arifes from their own fafety, or the fubfiftence of their flocks. There are tribes of them who arrive every year after the inundation, from the heart of Africa, to profit by the fertility of the country, and who in the fpring retire into the depths of the defert; others are ftationary in Egypt, where they farm lands, which they fow, and annually change. All of them obferve among themfelves flated limits, which they never pafs, on pain of war. They all lead nearly the fame kind of life, and have the fame manners and cuftoms. Ignorant and poor, the Bedouins preferve an original character diftinct from furrounding nations. Pacific in their camp, they are every where elfe in an habitual fate of war. The hufbandmen, whom they pillage, hate them; the travellers, whom they defpoil,
defpoil, fpeak ill of them; and the Turks who dread them, endeavour to divide and corrupt them. It is calculated that the different tribes of them in Egypt might form a body of thirty thoufand horfemen; but thefe are fo difperfed and difunited, that they are only confidered as robbers and vagabonds.

A fecond race of inhabitants are the Copts, called in Arabic ol Kobt. Several fanilies of them are to be found in the Delta; but the greateft part inhabit the Said, where they in fome places occupy whole villages. Both hiftory and tradition atteft their defcent from the people who were conquered by the Arabs, that is, from that mixture of Egyptians, Perfians, and, above all, Greeks, who, under the Ptolemies and Conftantines, were fo long in poffeffion of Egypt. They differ from the Arabs by their religion, which is Chiriftanity; but they are again diftinct from other Chriftians by their fect, being Eutychians. Their adherence to the theological diftinctions of this herefy, has drawn perfecutions on them on the part of the other Greeks, which has rendered them irreconcileable enemies, When the Arabs conquered the country, they took advantage of thefe animofities, to enfeeble
EGYPT AND SYRIA.
them both. The Copts have at length expelled their rivals, and, as they have been always intimately acquainted with the interior of the country, they are become the depofitaries of the regifters of the lands and tribes. Under the name of writers, they are at Cairo the intendants, fecretaries, and collectors of government. Thefe writers, defpifed by the Turks, whom they ferve, and hated by the peafants, whom they opprefs, form a kind of feparate clafs, the head of which is the writer to the principal chief. He difpofes of all employments in that department, which, according to the fpirit of the Turkifh government, he beftows on the beft bidder.

It is pretended that the name of Copts is derived from the city of Copios, whither it has been affirmed they retired from the tyranny of the Greeks; but I am inclined to think it has a more natural and more ancient origin. The Arabic term Kobti, a Copt, feems to me an evident abbreviation of the Greek word Ai-roupti-os, an Egyptian; for the $y$ was pronounced ori, among the ancient Greeks, and the Arabs having neither $p$ nor $g$ before $a, 0, u$, always fubftitute for thefe letters $k$ and 6 ; the Copts then are properly the remains
of the ancient Egyptians (c). This will be rendered ftill more probable, if we confider the diftinguifhing features of this race of people, we fhall find them all characterized by a fort of yellowifh dufky complexion, which is neither Grecian nor Arabian ; they have all a puffed vifage, fwoln eyes, flat nofes, and thick lips, in hort, the exact countenance of a Mulatto. I was at firft tempted to attribute this to the climate (d), but when I vifited the fphynx, I could not help thinking the figure of that monfter furnifhed the true folution of
(c) This is the more probable, fince we find then in the Said before the time of Dioclefian, and it is certain the Greeks were lefs numerous in the Said than the 1) elta.
(d) In fact, we may obferve the countenance of the neegroes reprefents precifely that fate of contraction which our faces aflume when ftrongly affected by heat. The yebrows are knit, the cheeks riie, the eyc-lids are conracted, and the mouth diftorted. This ftate of contraction, to which the features are perpetually expofed in the hot climates of the negroes, is become the peculiar characteriftic of their countenance. Exceaive cold, wind and frow produce the fame eficet, and thus we difcover the fame faces among the Tantars; while, in the tempelate zones, where there eatremes are unknown, the fentures are lengthened, the cyes lefs prominent, and the whole commenance more expanded.
the enigma: when I faw its features precifely thofe of a negro, I recollected the remarkable paffage of Herodotus, in which he fays, "For my part, I believe the Colchi to be " a colony of Egyptians, becaufe, like them, " they have black fkins and frizzled hair (e):" that is, that the ancient Egyptians were real negroes, of the fame fpecies with all the natives of Africa; and though, as might be expected, after mixing for fo many ages with the Greeks and Romans, they have loft the intenfity of their firf colour, yet they fill retain ftrong marks of their original conformation.

This obfervation may be fill farther extended, and it may be laid down as a general principle, that the features are a kind of monument capable, in many cafes, of elucidat. ing and afcertaining the teftimony of hiftory, concerning the origin of nations. Among us, a lapfe of nine hundred years has not been able to efface thofe difcriminating marks which diftinguifhed the inhabitants of Gaul from thofe Northern invaders, who, under Charles the Groff, fettled themfelves in our

Vol. I.
G
richent
richeft provinces. Travellers who go from Normandy to Denmark, obferve, with aftonihment, the extreme relemblance of the inhabitants of thofe two countries, which fill fubfirts, notwithfanding the diftance of times and places. The fame remark may be made with refpect to Franconia and Burgundy; and throughout England, France, and every other country, the fame proofs of emigration are found in the features of the inhabitants. Do not the Jews, in whatever part of the world they refide, carry with them diftinguifhing marks never to be effaced ? In thofe ftates where the nobility have defcended from a foreign people, introduced by conqueft, if thofe nobles contract no alliance with the natives, they will always remain diftinct in their features and perfons. The Calmuc race is, on this account, extremely diftinguifhable in India; and were we attentively to examine the various nations of Europe, and the North of Afia, we might pofibly difcover many refemblances which have been long fince forgotten.

But to return to Egypt : this hiftorical fact affords to philofophy an interefting fubject of reflection. How are we aftonifhed when we
EGYPT AND SYRIA.
behold the prefent barbarifm and ignorance of the Copts, defcended from the profound genius of the Egyptians, and the brilliant intelligence of the Greeks; when we reflect that to the race of negroes, at prefent our nlaves, and the objects of our extreme contempt, we owe our arts, fciences, and even the very ufe of fpeech; and when we recollect that, in the midit of thofe nations who call themfelves the friends of liberty and humanity, the moft barbarous of flaveries is juftified; and that it is even a problem whether the underftanding of negroes be of the fame fpecies with that of white men!

Language may be confidered as another monument whofe indications are neither lefs juft nor lefs inftructive. That formerly fpoken by the Copts well confirms this obfervation. On one hand, the form of their letters, and the greater part of their words, demonftrate that the Greek nation, during the thoufand years it continued in Egypt, has left deep marks of its power and influence; but, on the other, the Coptic alphabet has five letters, and the language a number of words, which may be confidered as the remains of the ancient Egyptian. Thefe words, critio

$$
\text { G } 2 \quad \text { cally }
$$

cally examined, have a fenfible analogy with the dialects of the ancient neighbouring nations, fuch as the Arabs, Ethiopians, Syrians, and even thofe who lived on the banks of the Euphrates; nor can it be doubted but all thefe languages are derived from one common ftock. For upwards of three centuries, that of the Copts has fallen into difufe. The Arabs, difdaining the language of the nations they fubdued, impofed on them, together with their yoke, the neceffity of learning that of their conquerors. This obligation became even a law, when, about the end of the firft century of the Hejira, the Caliph Waled I. prohibited the Greek tongue throughout his whole empire. From hat time the Arabic became univerfal; and the other languages, confined to books, fubfifted only for the learned, who neglected them. Such has been the fate of the Coptic ; the priefts and monks no longer underfland it, in their fcriptures and books of devotion, in which alone it exifts; and in Egypt, as in Syria, every one, whether Mahometan or Chriftian, fpeaks Arabic, nor is any other language underfood.

Some obfervations, important to geography and hiftory, here prefent themfelves. Travellers,
vellers, in treating of the countries they have feen, are accuftomed, and frequently find it abfolutely neceffary, to employ fome words of the language; as in giving the proper names of nations, men, cities, rivers, and natural productions peculiar to the country; but hence has arifen this inconvenience, that by conveying the words of one language in the characters of another, they have fo diffigured them, as to render them difficult to be known. This has happened particularly with refpect to the countries of which I treat ; and, in books of hiftory and geography, the confequence has been an inexplicable, and incredible confufion. Any Arab, who fhould learn French, would not recognize in our maps ten words of his own language, and, when we ourfelves have learnt Arabic, we experience the fame inconvenience. The caufes of this are various.

Firf, the ignorance of travellers, in general, of the Arabic language, and efpecially of the pronunciation; which ignorance occafions their ear, unaccuftomed to foreign founds, to make a vicious comparifon of them with thofe of their own language ( $f$ ).
(f) This is true even of the learned Pococke, who, notwithftanding his great knowledge of oriental books,

Secondly, the nature of feveral founds, which have nothing analogous to them in the language in which they attempt to convey them. This the French experience every day in the th of the Englifh, and in the jota of the Spaniards. Without hearing, it is impofible for any man to form an idea of thefe; but it is far worfe with refpect to the Arabs, in whofe language there are three vowels, and feven or eight confonants, to which Europeans are utter ftrangers. How then is it poffible to reprefent them, fo as to retain their true found, and not confound them with others totally different?

A third caufe of confufion has arifen from writers who have compiled books and maps. In collecting their information from all the Europeans who have travelled in the Eaft, they have adopted the orthography of proper names, fuch as they found it in the author they confulted, whout confidering that the different
could never difpenfe with an interpreter; and very lately $V$ onhaven, Profeflor of Arabic in Denmark, was unable even to underttand the falain alaikam (good-morrow) when he arrived in Ey!pt ; and his young companion forkial, at the und of a year, had made a much greater progrels than be tuad.
nations of Europe, though they equally ufe the Roman characters, found them differently.For example, the $u$ of the Italians is not the u of the French, but ou. Their $g h$ is founded like $g u$, and their $c, t c b$ : hence an apparent diverfity of names, which are, in fact, the fame. Thus it is, that what fhould be written in French chaik, or chêk, is varioufly expreffed by (g) fchek, Jhekh, fchech, fcick, according as the word has been copied from Englifh, German, or Italian writers, with whom $\beta$, $\int_{c} b, \int_{c}$, are refpectively founded like our cbé. The Poles would write $f z e c h$, and the Spaniards chej. This difference of the final $j$, ch, and $k b$, arifes from the Arabic letter being the Spanifh jota, or German cb (b), the found of which is unknown to the Englifh, French, or Italians. Hence it is that the Englifh write Rooda, for the name of the illand, which the Jtalians write Ruda, and which we, like the Arabs, fhould pronounce Rouda; that Pococke writes harammee for barami, a robber; and Niebuhr dsjebel for djebel, a mountain; that Danville, who has
(g) To make thefe differences fenfible in reading, the letters inuft be pronounced one by one.
(b) Not in all cafes, but after $o$ and $u$, as in buch, a book.
made great ufe of Englifh memoirs, writes Sbâm for Cbâm, Syria; wadi for ouadi, a valley; and a thoufand other examples.

This, as I have faid, has introduced a great confufion into orthography; and, if it be not remedied, we fhall find the fame uncertainty in modern writers we fo juftly complain of in the ancients, who, by their ignorance of the barbarous languages, and by their rage for accommodating the founds of them to the tafte of the Greeks and Romans, have deftroyed all traces of the original names, and deprived us of an invaluable mean of difcovering the ancient fate of things in that now fubfifing. Our language is fubject to the fame delicacy; it disfigures every thing, and our ear rejects, as barbarous, whatever it is not accufomed to. It is ufelefs, no doubt, to introduce new characters; but it might not be amifs to approach, as near as poffible, the found of thofe we would exprefs, and reprefent them by thofe of our letters which are beft adapted, adding to them fome certain marks (i). Were this done by every nation,
(i) When the French travellers, who are making the tour of the world, retuin, we fhall, no doubt, fee no fmall
tion, there would be but one nomenclature, and this would be a firft ftep towards an invention, which every day becomes more wanted, and more eafy, a general alphabet, adapted to all languages, or at leaft to thofe of Europe. In the courfe of this work I fhall make as little ufe as poffible of Arabic words; but when I Chall be under that neceffity, let not the reader be furprifed, if I frequently depart from the orthography of the generality of travellers. To judge from what they have written, we fhould be induced to think, that not one of them has known the true pronunciation of the Arabic alphabet, or underftood how to convey the founds of that language in our characters. But I return to my fubject.

A third race of inhabitants in Egypt are the Turks, who are the mafters of the country, or at leaft poffefs that title. The name of
confulion produced in their narratives, by the variations of the Englifh and French orthography. (This confufion is already fufficiently examplified in the different accounts of the fame voyages, publifhed refpectively by Hawkefworth, Parkinfon, Cook, Forfer, \&c. and by the different modes of writing the fame words, by the officers, and others, in the different hips. T.)

Turk, originally, was not peculiar to the nation to which it is now applied: it denoted, in general, all the hordes difperfed to the eaft, and even to the north, of the Cafpian Sea, as far as beyond Lake Aral, over thole vaft countries which have taken from them the denomination of Tourk-eftan ( $k$ ). Thefe are the fame people, who were known to the ancient Greeks by the names of Parthians, Maffagetes, and even of Scythians, for which we have fubftituted that of Tartars. A nation of fhepherds, continually wandering, like the Bedouin Arabs; they have fhewn themfelves, in every age, brave and formidable warriors. Neither Cyrus nor Alexander were able to fubdue them. But the Arabs were mure fortunate. About eighty years after Mahomet, they invaded, by order of the Caliph Waled I. the countiy of the Turks, and, by force of arms, impofed on them their religion : theyeven obliged them to pay tribute. But the empire falling into confufion, the rebel governors had recourfe to their aid to refift the power of the
(k) Eftan is a Perfian word, fignifying comentry, and is ufed as a termination to proper names; as in Alab-cflan, Frant-sfian, and we may add Kourd-eflan, and Indo-ftan, \&ic.

Caliphs,

Caliphs, and they took part in every conteft; nor were they long in acquiring the afcendant this might be expected to give them: for, continually encamped, and with arms in their hands, they became a warlike people, and initiated in every military manœuvre. Like the Bedouins, they were divided into tribes, or camps, called, in their language, ordou, of which we have made borde; and thefe tribes, allied or at variance, according to their feveral interefts, were perpetually engaged in wars. Hence we fee, in their hiftory, feveral nations, all equally called Turks, alternately attacking, deftroying, and expelling each other. To avoid this confufion, I fhall confine the name of Turks to thofe of Confantinople, and fhall give that of Turkmen to their predeceffors.

Some hordes of Turkmen, then, having been introduced into the Arabian empire, proceeded in a fhort time to give law to thofe who had called them in, either as mercenaries or allies. This the Caliphs themfelves experienced in a remarkable inftance. Motazzam (l), brother and fucceffor of Almamoun,

$$

$$

having
having taken a body of Turkmen for his guards, faw himfelf compelled to quit Bagdad on account of their diforders; and, after his time, their power and infolence encreafed to fuch a degree, that they became the difpofers of the throne and life of their Princes, and murdered three of them in lefs than thirty years. The Caliphs, when freed from this firft bondage, did not profit by their experience; for, about the year 935, Radi B'ellah ( $m$ ) having again refigned his authority to a Turkman, his fucceffors were entangled in their former chains, and guarded by the Emirs-el-omara; poffeffed only the fhadow of power. Amid the diforders of this anarchy, a multitude of Turkmen hordes penetrated into the empire, and founded different independent ftates, in the Kerman, and the Korafan; at Iconium, Aleppo, Damafcus, and in Egypt.
'Till then, the prefent Turks, diftinguifhed by the name of Ogouzians, had remained to the eaft of the Cafoian, and toward the Djihoun; but, about the beginning of the thirteenth century, Djenkiz-kan having unit-

> (m) Who delights in God.
ed all the tribes of Upper Tartary againft the Princes of Balk and Samarcand, the Ogouzians did not think proper to wait for the Mogols, but began their march under their Chief Soliman, and, driving their herds before them, encamped (in 1214) in the Aderbedjân, to the number of fifty thoufand horfemen. The Mogols followed them, and pufhed them Atill farther to the weft, into Armenia. Soliman being drowned (in 1220), in endeavouring to pafs the Euphrates on horfeback, Ertogrul, his fon took the command of the hordes, and advanced into the plains of Afia Minor, to which he was allured by the abundant pafturage they afforded for his cattle. The good conduct of this chief procured him, in thefe countries, a power and refpect which made his alliance fought after by other Princes. Among thefe was the Turkman Ala-el-din, Sultan of Iconium. Ala-el-din, finding himfelf old, and haraffed by the Tartars of Djenkiz-kan, granted lands to the Turks under Ertogrul, and even made their Chief general of all his troops. Ertogrul proved himfelf deferving the confidence of the Sultan, vanquifhed the Mogols, acquired ftill greater power and reputation, and tranfmitted
his honours to his fon Ofiman, who received from Ala-el-din, fucceffor of the former of that name, the Kofetan, drum, and horfe-tails, which are fymbols of command among all the Tartars. This Ofman, to diftinguifh the Turks, his followers, from the others, gave them the name of Ofmanles, from which we have made Ottomans ( $n$ ); which new name foon became formidable to the Greeks of Conftantinople, from whom Ofman conquered a fufficient extent of territory to found a powerful kingdom. He foon beftowed on it that title, by affuming, in 1300, the dignity of Sultan, which fignifies abfolute fovereign.

No one is ignorant in what manner his fucceffors, the heirs of his ambition and activity, continued to aggrandize themfelves at the expence of the Greeks; till, continually depriving them of whole provinces in Europe and Afia, they at length fhut them up within the walls of Conftantinople; and Mahomet II. fon of Amurath, having taken that city in 1453, amihilated this branch of the
(i:) This change of the $s$ to the $t$, arifes from ths original letter being the Englifh th, which foreigners exprefs fometimes by $t$, fometimes by s.

Roman empire. The Turks, now finding themfelves difengaged from the affairs of Europe, turned their ambitious arms to the fouthern provinces. Bagdad, fubjugated by the Tartars, had been without Caliphs for two hundred years (0), but a new power, eftablifhed in Perfia, had fucceeded to a part of their domains; and another, formed in Egypt, fo early as the tenth century, and fubfifting, at that time, under the name of Mamlouks, had feized on Syria.

The Turks determined to defpoil thefe two rivals. Bayazid, the fon of Mahomet, executed a part of this plan, by taking Armenia from the Sofi of Perfia, and Selim his fon completed it, by the conqueft of the Mamlouks. This Sultan having drawn them near to Aleppo, in 1517 , under pretext of defiring their affiftance in the war with Perfia, fuddenly turned his arms againft them, and took from them fucceflively Syria and Egypt, whither he purfued them. From that time the Turks eftablifhed themfelves in that coun-
(0) In I239, Holagoukan, a defcendant of Djenkiz, put an end to the Caliphat in the perfon of Moftazem.
try; but they are not fettled much among the villages. We rarely meet with any individuals of that nation, except at Cairo; there they exercife the arts, and occupy the religious and military employments. Formerly they alfo were advanced to pofts under government, but within the laft thirty years, a tacit revolution has taken place, which, without taking from them the title, has deprived them of the reality of power.

This revolution has been effected by a fourth and laft race, of which it new remains for us to fpeak. The individuals of it, all born at the foot of Mount Caucafus, are diftinguifhed from the other inhabitants by the flaxen colour of their hair, which is entirely different from that of the natives of Egypt. There were found there by the Crufaders in the thirteenth century, and called by them Mamelus, or, more correctly, Mamlouks. After remaining almoft annihilated for two hundred and thirty years, under the government of the Ottomans, they have found means to regain their confequence. The hiftory of this clafs of foldiers, the events which firf brought them into Egypt, the manner

## EGYPT AND SYRIA.

manner in which they have continued, and re-eftablifhed themfelves in that country, and the nature of their government, are political phrnomena of fo very fingular a nature, that they well deferve we fhould beftow a few pages in giving a diftinct account of them.

CHAP。

## C H A P. VII.

A fummary of the bifory of the Manzlouks.

THE Greeks of Conftantinople, debafed by a defpotic and bigoted government, had feen, in the courfe of the feventh century, the fineft provinces of their empire fall a prey to a new people. The Arabs, inflamed by the fanaticifm of their religion, and ftill more by the enjoyment of luxuries, to which they had hitherto been ftrangers, conquered, in eighty years, the whole north of Africa, as far as the Canaries, and all the fouth of Afia, quite to the river Indus, and the Tartarian deferts. But the book of the prophet, which prefcribed them their ablutions, fafts, and prayers, did not teach them either the fcience of legiflation, or thofe principles of natural morality which are the folid foundations of empires and locieties. The Arabs knew how to conquer, but by no means to govern: wherefore, the mishapen edifice of their power foon mouldered into ruins. The vaft empire of she Caliphs, paffing from defpotim to anarchy,

EGYPT AND SYRIA.
anarchy, was difmembered on every fide ; and the temporal governors, undeceived refpecting the fanctity of their firitual chief, every where erected themfelves into fovereigns, and formed independent ftates.

Egypt was not the laft to follow this example ; but it was not till 969 , (a) that a regular power was eftablifhed, in that country, in the perfon of princes, who, affuming the name of Fatmite Caliphs, difputed, even the title of their dignity, with thofe of Bagdad. The latter, at this period, ftripped of their authority, by the Turkman foldiers, were no longer capable of oppofing their pretenfions. Thus did the Egyptian Caliphs peaceably obtain poffeffion of that rich country, of which they might have formed a powerful fate. But the whole hiftory of the Arabs uniformly tends to prove that this nation never knew the, fcience of government. The fovereigns of Egypt, no lefs defpotic than thofe of Bagdad, proceeded, by like fteps, to the fame deftruction. They took part in the quarrels of religious fects; they even fetup new ones, and endeavoured to malse profelytes by perfecution. One of them,
(a) Or, 972, according to D'Herbclot.
called Hakem b'amr ellah, (a) was fo abfurdiy extravagant as to declate himfelf an incarnate God, and barbarous enough to fet fire to Cairo, for his amufement. Others diffipated the public treafure in a capricious luxury. The people, whom they oppreffed, held them in abhorrence, and their own courtiers, emboldened by their weaknefs, were eager to fhare their fpoils. Thus it happened to Ad-had-el-din, the laft of that race. After having been invaded by the crufaders, who had impofed on him a tribute, one of his generals, whom he had difmiffed his fervice, threatened to deprive him of a power of which he fhewed himfelf fo unworthy. Knowing, that he was incapable of refifting by himfelf, and unable to confide in a nation he had alienated from him, he had recourfe to foreigners. In vain did reafon and experience dictate to him that thefe, once employed as his defenders, would foon become the mafters of his perfon; one falfe ftep neeeffarily led to a fecond. He called in that tribe of Turkmen who haden-
(a) Commander by the order of God-This is the apoftle of the Drufes. Sce the curious account of that fingular people, publifhed in 1786 , from the manufcript of Mr . Venture de Paradis, and printed for Robinfons.
flaved the Bagdad caliphs, and implored the aid of Nour-el-din, the fovereign of Aleppo, who, already ravaging Egypt, haftened to fend an army into that country. Thefe troops effectually delivered Adhad from the tribute of the Franks, and the menaces of his general. But the Caliph foon found he had only changed his enemies; they left him nothing but the fhadow of power; and Se -lah-el-din, who took the command of the army in II7I, concluded by frangling him. Thus, the Egyptian Arabs were fubjected to ftrangers, whole princes commenced a new dynafty in the perfon of Selah-el-din.

During thefe tranfactionsin Egypt, and while the crufaders were, by their ill-conduct, laying the foundation for their expulfion from Syria, other revolutions were preparing in upper Afia. Djenkiz-Kan, become the fole chief of almoft all the Tartar hordes, was only waiting for a favourable opportunity to invade the neighbouring flates: an infult committed on fome merchants, under his protection, determined him to turn his arms againft the Sultan of Balk, and the eaftern part of Perffà ; which countries, about the year 1218 , became the theatre of one of the
moft bloody devaftations recorded in hiftory. The Mogols, fword in hand, pillaging, murdering, and burning without diftinction, either of age or fex, reduced the whole country of Sihoun, quite to the Tigris, to a heap of athes; and paffing to the north of the Cafpian fea, extended their ravages even into Ruffia and the Cuban. This expedition, which took place in 1227, eventually introduced the Mamlouks into Egypt. The Tartars, weary of maffacring, had brought back with them a prodigious quantity of young flaves, of both fexes; their camps, and the markets of Afia, were full of them. The fucceffors of Selah-el-din, who, in the quality of Turkmen, correfponded with the coafts of the Cafpian fea, perceived they had now an opportunity of forming, at a cheap rate, a body of foldiers of tried courage, and remarkable beauty; and about the year 1230, one of them purchafed to the number of twelve thoufand of there young men, who were Tcherkaffes, (Circafians), Mingrelians and Abazans. He had them trained up to military exercifes, and foon obtained a body of the handfomef, and beft foldiers in Afia, though at the fame time, the moft mutinous, as he very foon expe-
rienced. This foldiery, like the Pretorian bands, prefently gave laws to their mafter. They became ftill more infolent under his fucceffor, whom they depofed; in 1250, and Thortly after the difafter of Saint Louis, flew the laft Turkman prince, and fubftituted one of their own chiefs, with the title of Sultan (a), retaining themfelves that of Mamlouks, which fignifies military flaves. (b)

Such is this militia of flaves, converted into defpots, who, for many centuries, have continued to decide the fate of Egypt. From their firft eftablifhment, the effects correfponded with the means. Without any other bond of union than the intereft of the moment, or any public right to authority, but that of conqueft, the Mamlouks had no other rule of conduct and government, than the violence of a licentious and infolent foldiery. The firft
(a) The old French writers made Soldan and Soudan of this word, by the frequent change of ol into ou; as in fol fou, mol, mou, \&ac.
(b) Mamlouk, the participle paffive of malok, to poffefs, fignifies one poffeffed by, or the property of, another; which gives the fenfe of flave. But thefe are to be dif. tinguifhed from domeftic flaves, or blacks, who are called Abo.

104 TRAVELS IN
leader whom they elected, having found employment for their turbulent firit in the conqueft of Syria, reigned feventeen years; but fince him not one of them has governed fo long. The fword, the bow-ftring, or poifon, public murder, or private affaffination, have been the fate of a feries of tyrants, forty-feven of whom are enumerated in the fpace of two hundred and fifty-feven years. At length, in 1517, Selim, Sultan of the Ottomans, having taken and hanged Toumam Bey, their laft chief, put a period to that dynafty.

Agreeable to the principles of Turkifh policy, Selim fhould have exterminated the whole body of Mamlouks; but more refined views induced him, in this inftance, to depart from that fanguinary cuftom. He was fenfible that if he eftablifhed a Pacha in Egypt, with the fame authority as the Pachas in the other provinces, the diftance from the capital would be a ftrong temptation to revolt. To prevent this inconvenience, he projected fuch a form of government that the power, being diftributed among the different members of the fate, fhould preferve fuch an equilibrium as fhould keep them all dependent on himfelf. The remnant of the Mamlouks, who had efcaped

## EGYPT AND SYRIA. Ios

efcaped his firft maffacre, appeared proper for this purpofe ; and he next eftablifhed a Divan, or Council of Regency, compofed of the Pacha and the chiefs of the feven military corps. The office of the Pacha was to notify to this council the orders of the Porte, to expedite the tribute to Conftantinople, to watch over the fafety of the country againft foreign enemies, and to counteract the ambitious views of the different parties; on the other hand, the Members of the Council poffeffed the right of rejecting the orders of the Pacha, on affigning their reafons, nay, even of depofing him; they alfo mutt ratify all civil or political ordinances. As for the Mamlouks, it was agreed that from them fhould be chofen the twenty-four governors, or Beys (c), of the provinces: to them was entrufted the care of reftraining the Arabs, fuperintending the collection of the tributes, and the whole civil government of the country; but their authority was purely paffive, and they were only to be confidered as the inftruments of the determinations of the council. One of
(c) This word the author always writcs Bek, but we have retained the moft cultomary feelling, though the other is probably neareft the true pronunciation.
them, refiding at Cairo, was to bear the title of Shaik-el-beled (e), which mould be rendered Governor of the city, in a fenfe merely civil, that is to fay, unaccompanied with any idea of military power.

The Sultan likewife eftablifhed tributes, one part of which was deflined to pay twenty thoufand infantry, and a corps of twelve thoufand cavalry, refident in the country; the other, to procure for Mecca and Medina, the fupplies of corn neceffary for them; and the third, to fwell the Kafna, or treafure of Conftantinople, and to fupport the luxury of the feraglio. In other refpects, the people, who were to provide for theie expences, have been confidered, as M. Savary very well obferves, only as mere paffive agents, and remain in fubjection, as heretofore, to all the rigours of a military defpotifm.

This form of government has not ill correfponded with the views of Selim, fince it has fublifted about two centuries; but for the laft fifty years, the Porte, having relaxed from
(c) Sjaik properly fignifies an old man, fenior populi; it has the fame acecptation in the Eaft as among us, and means a lord or chief.
its vigilance, innovations have taken place; the Mamlouks have increafed, become mafters of all the riches and frength of the country, and, in fhort, gained fuch an afcendency over the Ottomans, that the power of the latter is reduced almof to nothing. To conceive the nature of this revolution, we muft confider the manner in which the Mamlouks are continued and multiplied in Egypt.

On feeing them fubfifting in this country for feveral centuries, we fhould be led to imagine their race is preferved by the ordinary means; but if their firft eftablifhment was a fingular event, their continuation is not lefs extraordinary. During five hundred and fifty years that there have been Mamlouks in Egypt, not one of them has left fubfiting iffue ; there does not exift one fingle family of them in the fecond generation; all their children perifh in the firft or fecond defcent. Almoft the fame thing happens to the Turks; and it is obferved that they can only fecure the continuance of their families, by marrying women who are natives, which the Mamlouks have always
difdained $(f)$. Let the naturalift explain why men, well formed, and married to healthy women, are unable to naturalize on the banks of the Nile, a race born at the foot of Mount Caucafus! and let it be remembered, at the fame time, that the
(f) The wives of the Mamlouks, are, like them, flaves brought from Georgia, Mingrelia, \&ic. Their beauty is a conftant topic among us, and we muft believe it on the credit of Fame. But an European, who has only been in Turkey, has no right to give his teftimony on the fubject. Thefe women are more invifible there than the others, and to this no doubt the reputation they have for beauty is greatly owing. I had an opportunity of learning fome particulars concerning them from the wife of one of our merchants at Cairo, who, by dealing in the laces and ftuffs of Lyons, had accefs to all the Harems. This lady, who has more than one claim to form a correct judgment of them, affured me that, among a thouland, or twelve hundred, chofen women the had feen, the had not found ten real beauties. But the Turks are not difficult : provided a woman be fair, fhe is handfome; and if the be fat, the is enchanting: "her countenance is like "the full moon; her haunches are like cufhions," fay they, to exprefs the fuperlative of beauty. They may be faid to meafure them by the quintal. They have befides a proverb worthy the notice of naturalifts: "Take a " fair female for thy eyes, but for pleafure an Egyp"tian." Experience has proved to them, that the Northern women are colder than thofe of the South.
plants of Europe, in that country, are equally unable to continue their fecies! Some may refufe to believe this extraordinary fact, but it is not on that account lefs certain; nor does it appear to be new. The ancients have made obfervations of the fame nature: thus, when Hippocrates (g) afferts, that among the Scythians and Egyptians, all the individuals refemble each other, though they are like no other nations; when he adds, that in the countries inhabited by thefe two races of men, the climate, feafons, elements, and foil poffers an uniformity no where elfe to be found, does he not recognize that kind of exclufion of which I feak? When fuch countries imprefs fo peculiar a character on every thing native, is it not a reafon why they Should reject whatever is foreign? It feems, then, that the only means of naturalizing animals, and plants would be to contract an affinity with the climate, by alliance with the native fpecies; and this, as I have before faid, the Mamlouks have conftantly refufed.

The means therefore by which they are perpetuated and multiplied, are the fame by
(g) Hippocrates, lib. de Aere, Locis et Aquis.
which they were firf ertablifhed; that is to fay, when they die, they are replaced by flaves brought from their original country. From the time of the Mogols, this commerce has been continued on the confines of the Cuban and the Phafis (b), in the fame manner as it is carried on in Africa, by the wars among the numerous tribes, and by the mifery of the inhabitants, who fell their own children for a fubfiftence.

Thefe flaves, of both fexes, carried firf to Conftantinople, are afterwards difperfed throughout the empire, and purchafed by the wealthy. The Turks, when they fubdued Egypt, fhould undoubtedly have prohibited this dangerous traffic: their omitting this has been the caufe of that reverfe of fortune which feems about to difpoffefs them of their conqueft, and which many political errors have been long preparing.

For a confiderable time the Porte had neglected the affairs of this province; and, in
(b) This country has been at all times a nurfery for flaves; it furnifhed the Greeks, Romans, and ancient Afia with them. But is it not extraordinary to read in Herodotus, that formerly Colchis (now called Georgia), received black inhabitants from Egypt, and to fee the fame country, at this day, make fo different a return ?
order to reftrain the Pachas, had fuffered the Divan to extend its power, till the chiefs of the Janifaries and Azabs were left without controul. The foldiers themfelves, become citizens, by the marriages they had contracted, were no longer the creatures of Conftantinople; and a change introduced into their difcipline ftill more increafed thefe diforders.

At firf, the feven military corps had one common treafury, and, though the fociety was rich, individuals, not having any thing at their own difpofal, could effect nothing. The chiefs, finding their power diminifhed by this regulation, had intereft enough to get it abolifhed, and obtained permiffion to poffers diftinct property, lands, and villages. And, as there lands and villages depended on the Mamlouk governors, it was neceffary to conciliate them, to prevent their oppreffions. From that moment, the Beys acquired an afcendancy over the foldiers, who, till then, had treated them with difdain; and this could not but continually increafe, fince their governments procured them confiderable riches. Thefe they employed in creating themfelves friends and creatures; they multiplied their flaves, and, after emancipating them, employed
ployed all their intereft to advance them in the army, and promote them to various employments. Thefe upfarts, retaining for their refpective patrons the fubmiffive reverence ufual in the Eaft, formed factions implicitly devoted to their pleafure.

By fuch means Ibrahim, one of the Kiayas, (i) or veteran colonels of the Janifaries, about the year 1746 , rendered himfelf, in reality, maiter of Egypt ; he had fo multiplied and advanced his freed men that, of the twentyfour Beys, which hould be their number, no lefs than eight were of his houfehold. His influence too was the more certain, as the Pacha always left vacancies in the number, in order to receive the emoluments. On the other hand, the largeffes he beftowed on the officers and foldiers of his corps, attached them to his intereft, and Rodoan, the molt powerful of the Azab colonels, uniting himfelf with him, completed his power.

The Pacha, incapable of oppofing this faction, was now no more than a phantom,
(i) The military corps of the Janifaries, Azabs, \&c. were commanded by Kiayas, who, after the firft year, laid down their employments, and became yeterans, with a voice in the Divan.
and the orders of the Sultan vanifhed before thofe of Ibrahim. At his death, which happened in 1757, his houfe, that is, his enfranchifed flaves, divided among themfelves, but united againt all others, continued to give the law. Rodoan, who had fucceeded his colleague, being expelled and flain by a party of young Beys, feveral chiefs followed each other in a very thort interval. At length, about the year 1766, Ali Bey, one of the principal actors in the troubles which attracted the attention of Europe for feveral years, gained a decided afcendency over his rivals, and, under the titles of Emir-Hadj, and Shaik-el-Beled, rendered himfelf abfolute mafter of the country. The hiftory of the Mamlouks being intimately connected with his, I fhall continue the former, by giving an abitract of the latter.

## C H A P. VIII.

Summary of the Hifory of Ali Bey (a).
THE birth of Ali Bey is fubject to the fame uncertainty as that of the Mamlouks in general, who, fold by their parents, or carried off
by
(a) Since this chapter was written, M. Savary has publifhed two more volumes on Egypt, in one of which is the life of this fame Ali Bey. I expected to have found in it particulars proper to verify or correct my own narrative ; but what was my aftonifhment to perceive, we have hardly a fingle circumflance in common? This difagreement was fo much the more unpleafing to me, fince, as I have already differed from him on feveral other fubjects, it may feem, to many readers, as if I made a point of contradieting that traveller. But, befides that I am not perfonally acquainted with M. Savary, I proteft, that fuch partiality is no part of my charakter. How then does it happen that, having been upon the fame fpot, having neccflarily drawn our materials from like fources, our accounts fhould be fo different? I confefs, I cannot well difcover the reafon; all I can fay is, that, during the fix months I lived at Cairo, I carefully enquired of fuch of our merchants, and Chriftian traders, as, from long refidence in the country, and being perfons of underftanding, appeared to me likely to give the moft au-
by their enemies, at a very early age, feldom remember much of their origin or their country; or if they do, conceal them. The opinion
thentic teftimony. I found them agreed on the principal facts, and I had the advantage of hearing the relations they gave me confirmed by a Venetian merchant (M. C. Rofetti) who was one of the confidential friends of Ali Bey, and the counfellor and promoter of his comnections with the Ruffians, and his projects refpecting the commerce of India. In Syria I have met with great numbers who had been eye-witnefles of the principal events in the hiftory of Shaik-Daher and Ali Bey; and, from their teftimony, have been able to afcertain the degree of credit due to the information I received in Egypt. During eight months I refided among the Diuzes, I learnt from the Bifhop of Aleppo, formerly Bifhop of Acre, a thoufand anecdotes, the more indubitable, as Ibrahim Sabbar, the Minifter of Daher, was frequently in his houfe. In Paleftine I have lived with Chriftians and Muflulmen, who had been officers under Daher, were at che firlt fiesere of Yafa (Joppa) with Ali Bey, and defended that place in the fecond againft Miohammal Bey. I have been on the fpot, and examained all the necellary witnefes. I have received hiftorical notes from the Venctian agent at Yafa, who had a conliderable flare in all thefe troubles. Thefe are the materials from which I have compiled my narrative. Not but I have met with lome circumitinces which are differently related. But from fuch what hiftory is free? Are there not ten difierent relations of the battle of Fontenoy? All we can hope is to collect winat is
opinion the moft general refpecting Ali is, that he was born among the Abazans, a people inhabiting Mount Caucafus, and which furnihes
moft probable; for I cannot but confcfs I have myfelf been frequently convinced, on this occafion, how difficult it is to afcertain the real truth in any hiftorical facts. .

Not but I have heard before feveral of the flories related by MI. Savary, who cannot be accufed of having invented them himfelf, for his account is taken, word for word, from an Englifh book, printed in 1783, and entieled A Hiflory of the Revolt of Ali Bey, though there are only forty pages appropriated to that fubject, the remainder being common-place remarks on the manners and geography of the country. I was at Cairo when the public papers gave an account of this work; and 1 well recollećt that when our merchants heard of Maria, wife of Ali Bey; of the Greek Daoud, his father, and his finding his fon, as Jacob found Jofeph, they were ftrangely furprifed, and laughed heartily at the tales trumped up in Europe. It is in vain, therefore, for the Englith Factor, who was in Egypt in 177 I , to appeal to the authority of the Kiaya of Ali Bey, and a number of Bejs, whom he confulted, rvithout under panding Arabic; he can never be looked upon as well informed. I fufpect him the more fince he fets out with an unpardonable error, in afferting that the country of Abaza is the fance as that of Amafea; for one of thefe is a country of Caucafus, fretching towards the Cuban ; and the other a city of ancient Cappadocia, or noudicra Natolia. To concluce, we may find at Paris Micmoirs
furnifhes the flaves in greateft requeft (b). The merchants, who carry on this traffic, brought him to one of their annual fales, at Cairo, where he was purchafed by the brothers Iface and Youref, Jews, employed in the cuf-tom-houle, who made a prefent of him to Ybrahim Kiaya. It is fuppofed he might then be about twelve or fourteen years old; but, in the Eaft, neilher Mahometans nor Chriftians keeping any regifers of births, their precife age is never known.

Ali performed for his patron the ufual fervices of the Mamlouks, which are nearly fimilar to thofe of the pages to our Princes. He received the cuftomary education, which confifts in learning to manage a horfe well, fire the carbine and piftol, throw the djerid, uie the

Memoirs of Ali Bey, colleceed by a perfon of diftinction, who has been in Egypt, as well as M. 'Savary and myfelf, and thoofe Memoirs will fatisfy all doubts which may remain on this fubject.
(b) The Turks hold the Tcherkaffes, or Circaffian. flaves, in the higheft eltimation ; next to them the Aba-. zans, next the Mingrelians, after them the Georgians, after them the Ruffians and the Poles, next the Hungarians and the Germans, then the Negroes; and, laft of all, the Spaniards, Maltefe, and other Franks, whom they defpife as drunkards, debauchees, idle, and mutinous.
fabre, and even a little reading and writing. In all thefe exercifes he difplayed an activity and fire which obtained him the furname of Djendali, or madinan. But the folicitude of ambition foon moderated this exceffive warmth. About the age of eighteen or twenty, his patron fuffered him to let his beard grow, that is to fay, gave him his freedons ; for, among the Turks, to want muftachios and beard, is thought fit only for flaves and women; and hence arifes the unfavourable impreffion they receive on the firft fight of an European. When he had made him free, Ibrahim gave him a wife and revenues, promoted him to the rank of Kachef, or Governor of a diftrict, and, at length, procured him to be elected one of the four-and twenty Beys.

Thefe fucceffive promotions, and the power and riches he acquired, awakened the ambition of Ali Bey. The death of his patron, which happened in 175\%, opened a free courfe for his projects. He engaged in every intrigue for raifing or difplacing the chiefs, and was the principal author of the ruin of Rodoan Kiaya. After Rodoan, various factions alternately advanced their leaders into
his ftation. He who occupied it in 1762, was Abd-el-Rahman, of little confequence himfelf, but fupported by feveral confederate houfes. Ali was then Shaik-el-Beled, and feized the moment when Abd-el-Rahman was conducting the caravan of Mecca to get him exiled; but he himfelf had his turn, and was condemned to retire to Gaza. Gaza, dependent on a Turkifh Pacha, was neither fo agreeable nor fo fecure a refidence as to tempt him to make it his abode; he therefore only made a feint of taking that route, and, on the third day, turned towards the Said, where he was joined by his partizans.

He refided two years at Djirdja, where he matured his plans for obtaining and fecuring that power to which he fo ardently afpired. The friends his money had gained him at Cairo having at length procured his recall, in 1766, he appeared fuddenly in that city, and, in one night, flew four Beys, who were his enemies, exiled four others, and became, from that time, the chief of the moft numerous party. As he had now poffeffed himfelf of the whole authority, he refolved to employ it fill further to promote his ambitious views. No longer contented with the trivial title of $I_{4} \mathrm{Bey}$,

Bey, he could not fubmit to the fupremacy of the Porte, and aimed at nothing lefs than the title of Sultan of 『gypt. To this object all his meafures tended; he expelled the Pacha, who was only a fhadow of reprefentation; he refufed the accuftomed tribute; and, in 1768 , even proceeded to coin money in his own name ( $c$ ).

The Porte did not fee without indignation thefe attacks on her authority; but open war alone could repel them, and circumfances were not favouraile. Daher, eftablifhed in Acre, kept Syria in awe ; and the Divan of Conftantinople, occupied with the affairs of Poland, and the pretenfions of Ruffia, befowed its whole attention on the tranfactions in the North. The ufual method of capidjis was had recourfe to; but poifon, or the poniard, always anticipated the bow-ftring they bore. Ali Bey, availing himfelf of thefe circumttances, pumhed forward his enterprizes with fuccefs. For feveral years a port of the
(c) After the ruin of his affairs, his piafters fell 20 per cent, becaufe it was pretended they were too much debafed with alloy; but a merchant fent ten thoufand of them to Marfeilles, and made a confiderable profit by melting them down.

Said had been occupied by Arab Shaiks under little fubjection. One of them, named Hammam, had formed there a power capable of giving difturbance. Ali began by delivering himfelf from this danger; and, under pretext that this Shaik concealed a treafure entrufted to him by Ibrahim Kiaya, and that he harboured rebels, fent a corps of Mamlouks againft him, in 1769 , commanded by his favourite Mohammad Bey, who deftroyed in one day both Hammam and his power.

The end of this year was productive of another expedition, which in it's confequences muft have affected Europe. Ali Bey fitted out fome veffels at Suez, and, manning them with Mamlouks, ordered the Bey Haffan to fail with them to Djedda, (Gedda), the port of Mecca, which he was to deize on, while a body of cavalry, under the command of Mohammad Bey, marched by land to take porfeffion of Mecca itfelf, which was given up to plunder. His project was to render Djedda the emporium of the Indian commerce; and this plan, which was fuggeited by a young Venetian merchant, (a) who pof-
(a) M. C. Rofetti; his brother, Baithazar Rofetti, was to be made commifioner of the cuftoms at Djecida.

## TRAVELS IN

feffed his confidence, was to make Europe abandon the paffage by the cape of Good Hope, by fubftituting the ancient route of the Mediterranean, and the Red Sea; but the event has proved that the attempt was too precipitate, and, that before gold is introduced into a country, laws fhould be eftablifhed.

Ali, the vanquifher of a petty prince of the Said, and conqueror of the huts of Mecea, from this time thought himfelf formed to command the whole world. His courtiers told him he was as powerful as the Sultan of Conftantinople, and he believed his courtiers. Had he exercifed his reafon, he would have perceived that Egypt, compared with the reft of the empire, confituted only a very inconfiderable ftate, and that the feven or eight thoufand cavalry he commanded were nothing when oppofed to a hundred thoufand Janifaries, whom the Sultan has at his difpofal : but the Mamlouks know nothing of geography; and Ali, who viewed Egypt near, found it much larger than Turkey at a diftance. He determined therefore to commence his conquefts: Syria, which was in his neighbourhood, naturally prefented the firt object, and every thing was favourable to
his views. The war with the Ruffians, which broke out in 1769 , occupied all the Turkifh forces in the north. Shaik Daher, in rebellion againft the Porte, was a powerful and faithful ally; and the extortions of the Pacha of Damafcus, by difpofing thofe he oppreffed to revolt, afforded the moft favourable opportunity of invading his government, and meriting the title of the deliverer of nations.

Ali faw perfectly well the advantage of this pofture of affairs, and made no delay in putting his forces in motion. All his meafures being at length taken, he detached, in 1770 , under the command of five Beys, a corps of about five hundred Mamlouks, all cavalry, (for they never march on foot), and fent them to take poffeffion of Gaza, in order to fecure an entrance into Paleftine. Ofman, Pacha of Damafcus, no fooner heard of the invafion, than he flew to arms. The Mamlouks, terrified at his activity, and the number of his troops, held themfelves in readinefs to fly at the firft attack ; but Daher, the moft indefatigable chief that Syria has feen for many centuries, haftened from Acre, and extricated them from their embarraffment. Ofman, who was encamped near Yafa, fled without even
offering battle; and Daher, making himfelf mafter of Yafa, Ramla, and all Paleftine, opened a road for the grand army he expected.

This arrived about the end of February, 1771: and the gazettes of that time, ftating it at fixty thoufand men, induced Europe to believe it was an army fimilar to thofe of Ruffia or Germany; but the Turks, and more efpecially thofe of Alia, differ ftill more from the Europeans in their military than their civil cuftoms. Sixty thoufand men with them are very far from being fynonimous with fixty thoufand foldiers, as in our armies. That of which we are now lpeaking affords a proof of this: it might amount in fact to forty thoufand men, which may be claffed as + follows. Five thoufand Mamlouk cavalry, which was the whole effective army; about fifteen hundred Barbary Arabs on foot, and na other infantry', for the Turks are acquainted with none; with them, the cavalry is every thing. Befides thefe, each Mamlouk having in his fuite two footmen, armed with Ataves, thefe would form a body of ten thoufand valets; befides a number of lervants and ferradjis, or attendants on horfeback, for the

Beys

Beys and Kachefs, which may be eftimated at two thoufand: all the reft were futlers, and the ufual train of followers.

Such was this army, as defcribed to me in Paleftine by perfons who had feen and followed it. It was commanded by the friend of Ali, Mohammad Bey, furnamed Aboudabab, or father of gold, from the luxury of his tent and caparifons. As to order and difcipline thefe muft not be mentioned. The armies of the Turks and Mamlouks are nothing but a confufed multitude of horfemen, without uniforms, on horfes of all fizes and colours, riding without either keeping their ranks, or obferving any regular order.

This rabble took the road to Acre, leaving, wherever they paffed, fufficient marks of their want of difcipline and rapacity. At Acre, a junction was formed with the troops of Shaik Daher, which confifted of fifteen hundred Safadians (a), on horfeback, and commanded by his fon Ali; twelve hundred Motualis cavalry, having for their leader the Shaik Nafif, and about one thouiand Mograbian in-
(a) Daher's fubjects were called by this name, becaufe his feat of government was originally at $S$ afad, a village of Galilee.
fastry.
$\geq 26$ TRAVELS IN
fantry. This union effected, and their plan coucerted, they proceeded towards Damarcus fome time in the month of April. Ofman had employed this interval in preparations, and had, on his fide, collected an army equally numerous and ill-regulated. The Pachas of Said, (a) Tripoli, and Aleppo, had joined him with their forces, and were waiting for the enemy under the walls of Damafcus.

The reader muft not here figure to himfelf a number of complicated and artificial morements, fuch as thofe which, within the laft century, have reduced war with us to a fcience of fyftem and calculation. The Afatics are unacquainted with the firft elements of this conduct. Their armies are mobs, their marches ravages, their campaigns mere inroads, and their battles, bloody frays; the ftrongeft, or the moft adventurous party goes in fearch of the other, which not unfrequently flies without offering refiftance; if they ftand their ground, they engage pell-mell, difcharge their carbines, break their fpears, and hack each other with
(a) Pronounced Sede, in French; in Englifh Said, as above; it is the ancient Sidon.
their fabres, for they rarely have any cannon ; and when they have they are but of little fervice. A panic frequently diffufes itfelf without caufe ; one party flies, the other purfues, and fhouts victory: the vanquifhed fubmit to the will of the conqueror, and the campaign often terminates without a battle.

Such, in a great meafure, were the military operations in Syria, in 177I. The combined army of Ali Bey and Daher marched to Damafcus. The Pachas waited for them; they approached, and, on the 6 th of June, a decifive action took place: the Mamlouks and Safadians rufned with fo much fury on the Turks, that, terrified at the carnage, they immediately took to flight, and the Pachas were not the laft in endeavouring to make their efcape. The allies became mafters of the country, and took poffeffion of the city without oppofition, there being neither walls nor foldiers to defend it. The cafle alone refifted. Its ruined fortifications had not a fingle cannon, much lefs gunners; but it was furrounded by a muddy ditch, and behind the ruins were pofted a few mufqueteers, and thefe alone were fufficient to check this army of cavalry. As the befieged, however, were
already conquered by their fears, they capitulated the third day, and the place was to be furrendered the next morning, when at daybreak a moft extraordinary revolution took. place.

At the moment that the fignal of furrender was expected, Mohammad fuddenly commanded a retreat, and all his cavalry turned towards Egypt. In vain did the aftonifhed Ali-Daher and Nafif fly to demand the caufe of fo ftrange a meafure : the Mamlouk made no other reply to their reiterated queftions, than a haughty menace; and the whole army. decamped in confufion. Nor was this merely a retreat, but a pofitive flight; they feemed as if hotly purfued by a victorious enemy; the road from Damafcus to Cairo was covered with men on foot, feattered horfemen, and ftores and baggage they had abandoned. This fingular occurrence was attributed, at the time, to a pretended report of the death of Ali Bey; but the real folution of the enigma was a fecret conference which pafted at night in the tent of Mohammad Eey. Ofman, finding himfelf too weak to oppofe thefe combined forces, had recourfe to artifice. He contrived to introduce to the

Egyptian general a crafty agent, who, l:nder pretence of propofing terms of peace, endeavoured to diffeminate difcord and revolt. He infinuated to Mohammad that the part he was acting was equally ill befitting his honour, and contrary to his intereft that he was deceived in imagining the Sultan would leave unpunifhed the offences of Ali Bey; that it was a facrilege to violate fo holy a city as Damafcus, one of the two gates of the Caaba (g); that he was aftonifhed that Mohammad fhould prefer the favour of a nave of the Sultan, to that of the Sultan himfelf, and that he fhould fet up a fecond mafter between him and his fovereign; befides, that it was evident this mafter, by daily expofing him to frefl dangers, was facrificing him both to his own perfonal ambition, and to the jealoufy of his Kiaya, the Copt Rezk.

Thefe reafons, and efpecially the two latter, which were founded on indifputable facts, made a ftrong imprefion on Mohammad and his Beys: they immediately held a
(g) The two great caravans which make the pilgrimage to Mecca, fet out from Cairo and Damarcus.
Vol. I.
K
council.

## : 30 <br> TRAVEISIN

council, and fwore folemnly, by the fabre and the Koran, to return without delay to Cairo. In confequence of this determination, they decamped fo fuddenly, and abandoned their conquefts with fuch precipitation, that the report of their coming preceded their arrival at Cairo only by fix hours. Ali Bey was ftruck with terror, and wifhed to have punifhed his general upon the fpot; but Mohammad appeared fo well fupported, that it was impracticable to attempt any thing againft his perfon; it was neceffary to diffemble, and Ali Bey fubmitted to this with the lefs difficulty, as he owed his fortune to his diffinulation much more than to his courage.

Though thus deprived, at one Atroke, of the fruits of fo expenfive a war, Ali Bey did not renounce his projects. He continued to fend fuccours to his ally, Daher, and prepared a fecond army for the campaign of 1772 ; but fortune, weary of effecting more for him than his own abilities could have accomplithed, ceafed to favour him.

The firft reverfe he experienced was in the lofs of feveral cayaffes, or boats, loaded with rice, for Shaik Daher, which were taken
by a Ruffian privateer, within fight of $\mathrm{Da}-$ mietta; but another, and fill more ferious accident, was the efcape of Mohammad Bey. Ali Bey could not eafily forget the affair of Damafcus; neverthelefs, from the remains of that affection we retain for thofe whom we have ferved, he could not bring himfelf to refolve on having recourfe to violence, when an expreffion made ufe of by the Venetian merchant who enjoyed his confidence fixed his wavering refolution.
"Have the Sultans of the Franks," faid Ali Bey, one day, to that European (b), " children as rich as my fon Mohammad ?" "No, Seignior," replied the courtier, "they "s are careful of that; for they think that ss when children become too great, they are " often in hafte to enjoy their inheritance." This infinuation went to the heart of Ali Bey. From that moment he beheld in Mohammad a dangerous rival, and refolved his ruin. To effect this, without rifk, he firft fent directions to all the gates of Cairo, that no Mamlouk fhould be fuffered to pafs in the evening, or at night; he then ordered
(b) This anecdote I received from that merchant.

$$
\mathrm{K}_{2} \quad \text { Mohammad }
$$

Mohammad into immediate exile in the Said. By thefe oppofite orders he imagined Mohammad would be ftopped at the gates, and that, the kecpers taking him into cuftody, he fhould eafily free himfelf from his fears; but chance difconcerted thefe vague and timid meafures. Mohammad, by fome miftake, was fuppofed to be charged with private orders from Ali. He and his retinue were allowed to pafs, and from this moment all was loft. Ali Bey, informed of his flight, gave orders to purfue himi ; but Mahommad appeared fo well prepared and determined that none dared attack him. He retired into the Said, foaming with rage, and thirting for vengeance. Even after his arsival there, he had another narrow efcape. Ayoub Bey, an officer of Ali's, feigning great deteftation of the injuftice of his mafter, received Mohammad with tranfport, and fwore upon his fabre and the Koran, to hhare his fortune; but, a few days after, letters were intercepted from this fame Ayoub, to Ali, in which he promifed him, without delay, the head of his enemy. Mohammad, having difcovered the plot, fized the traitor; and, after cutting off his hands
hands and tongue, fent him to Cairo to receive the recompenfe of his patron.

The Mamlouks, however, wearied with the infolence of Ali Bey, repaired in crowds to his rival ; and, in about fix weeks, Mohammad faw himfelf fufficiently ftrong to leave the Said, and march towards Cairo. Ali Bey, on his fide, fent his troops againft him; but feveral of them likewife deferted to the enemy: at length, in the month of April 1/72, the armies had a rencounter in the plain of El-Mafateb, at the gates of Cairo, the iflue of which was, that Mohammad and his party entered the city, fabre in hand. Ali Bey, having barely time to make his efcape with eight hundred of his Mamlouks, repaired to Gaza, for the firft time in his life, and endeavoured to get to Acre, to join his ally, Daher; but the inhabitants of $\mathrm{Na}-$ blous and Yafa cut off his retreat ; and Da her himfelf was obliged to open him a paffage. The Arab received him with that fimplicity and franknefs which in all ages have characterized that people, and conducted him to Acre. It was neceffary to fuccour Said (Sidon), then befieged by the troops of Ofman, in conjunction with the Druzes. He K 3 accord-
accordingly marched to that place, accompanied by Ali. Their combined troops formed a body of about feven thouland cavalry, and, at their approach, the Turks raifed the fiege, and retired to a place a league to the northward of the city, on the river Aoula. There, in July $\mathbf{1 7 7 2}$, the moft confiderable and mort methodical engagement of the whole war took place. The Turkifh army, three times more numerous than that of the two allies, was entirely defeated. The feven Pachas who commanded it took to flight, and Said remained in the poffeffion of Daher, and his governor Degnizla.

Ali Bey and Daher, on their return to Acre, proceeded to chaftife the inhabitants of Yafa, who had revolted that they might convert to their ufe the ammunition and clothing left there by one of Ali's fleets, before he was expelled from Cairo. The city, which was held by a Shaik of Nablous, fhut its gates, and refolved to ftand the fiege. This commenced in July, and lafted eight months, though Yafa had no other rampart than a mere garden-wall, without a ditch; but in Syria and Egypt they know ftill lefs of carrying on a fiege than of engagements
in the field; at length, however, the befieged capitulated in February 1773.

Ali, now feeling himfelf difengaged, thought of nothing but his return to Cairo. Daher offered to furnifh him with fuccours; and the Ruffians, with whom Ali had contracted an alliance, while treating of the affair of the privateer, promifed to fecond him: time however was neceffary for collecting thefe fcattered aids, and Ali became impatient. The promifes of Rezk, his Kiaya and his oracle, rendered him fill more defirous to be gone. This Copt never ceafed affuring him that the hour of his return was come; that the afpects of the ftars were moft propitious; and that the downfall of Mohammad was now mof certain. Ali, who like all the Turks, believed firmly in aftrology, and who put the greater faith in Rezk, becaufe he believed his predictions had been often verified, could no longer endure delay; and the news he received from Cairo completed his impatience.

In the beginning of April, letters were fent him by his friends, in which they informed him that the people were tired of his ungrateful have, and that nothing but his prefence was wanting to expel him. He
determined, therefore, to fet out immediately, and, without giving the Ruffians time to arrive, departed with his Mamlouks, and fifteen hundred Safadians, commanded by Ofman, the fon of Daher; but he was ignorant that the letters from Cairo were a ftratagem of Mohammad's, and that this Bey had extorted them by force, in order to deceive and lead him into the fnare he was preparing. In fact, no fooner had Ali advanced into the defert which feparates Gaza from Egypt, than he fell in, near Salakia, with a chofen body of a thoufand Mamlouks, who were lying in ambufh, waiting his arrival. This corps was commanded by the young Bey, Mourad, who, being enamoured of the wife of Ali Bey, had obtained a promife of her from Mohammad, in cafe he could bring him the head of that illufrious unfortunate. Scarcely did Mourad perceive the duft which announced the approach of his enemies before he rufhed upon them with his Mamlouks, and threw them into confufion. To crown his good fortune, be met with Ali in the crowd, attacked, and wounded him in the forchead with a fabre, made him prifoner, and conducted him to Mohammad. The latter, who was encamped two leagues in
the rear, received his former mafter with all that exaggerated refpect which is fo cuftomary with the Turks, and that fenfibility which perfidy knows fo well how to feign. He provided a magnificent tent for him, ordered him to be taken the greateft care of, filed himfelf a thoufand times, " his llave, who " licked the duft of his feet;" but the third day, this parade of politenefs terminated by the death of Ali Bey, who died, according to fome, of his wounds; or, as others report, by poifon : the probability of both thefe accounts is fo equal, that it is impofible to decide between them.

Thus terminated the enterprizes of this celebrated man, who for fome time engaged the attention of Europe, and afforded many politicians hopes of a great revolution. That he was an extraordinary character, cannot be denied ; but it is exaggeration to place him in the clafs of great men : the accounts given of him by witneffes highly worthy credit, prove that though he poffeffed the feeds of great qualities, the want of culture prevented them from coming to maturity. Let us pafs over his credulity in aftrology, which more frequently influenced his conduct
duct than more fubftantial motives; let us not mention his treacheries, his perjuries, the murders even of his benefactors ( $i$, , by which he acquired, or maintained his power, the morality of a rude fociety is doubtlefs lefs rigid than that of a well-regulated ftate; but, judging ambitious men on their own principles, we Chall find that Ali Bey either ill underftood, or erroneoufly purfued his plan of greatnefs; and that it was he himfelf who paved the way for his own ruin. We are certainly juftified in charging him with three errors: Firf, that imprudent thirft after conqueft, which fruitlefsly exhaufted his revenue, and his forces, and made him neglect the interior adminiftration of his own country. Secondly, the premature in dolence to which he refigned himfelf, executing nothing but by his lieutenants, which diminifhed the refpect entertained for his perfon by the Mamlouks, and encouraged the fpirit of revolt. Thirdly, the exceffive riches he flowered on his favourite, which procured him the influence he abufed. Suppofing Mohammad virtuous, ought not Ali

[^3]to have dreaded the feduction of flatterers, who, in all countries, are the conftant atterdants on opulence? In Ali Bey, however, we muft admire one quality, which diftinguifhes him from the multitude of tyrants who have governed Egypt: if a vicious education prevented him from knowing what true glory is, it is certain, at leaft, he was animated with the defire of obtaining it; and this was never the portion of vulgar minds. He wanted nothing but to be advifed by thofe who knew the true road to if; and among thofe who are born to command, how few are there who merit this eulogium?

I cannot proceed without a few remarks on an obfervation I remember to have frequently heard made at Cairo. Thofe among our merchants who had witneffed the reign of Ali, and his downfall, after extolling his good government, his zeal for juftice, and his beneficence to the Franks, never failed to exprefs their aftonifhment at his not being regretted by the people; and thence took occafion to repeat thofe charges of inconftancy and ingratitude with which the orientals are ufually. reproached; but, on maturely examining

## 140 TRAVELS IN

every circumftance, this does not appear to me fo extraordinary as it may at firft feem.

In Egypt, as in every other country, the judgment of the people is guided by the penury or plenty in which they live; their love or hatred, their cenfure or applaufe, are meafured by the eafe or difficulty with which they can procure the means of fubfiftence, in confequence of the adminiftration of their rulers; nor can this be efteemed an improper criterion. In vain may we tell them that the honour of the empire, the glory of the nation, the encouragement of commerce, and the improvement of the fine arts, require fuch and fuch meafures. Every thing is fuperfeded by the neceffaries of life; and when the multitude want bread, they have at leaft a right to withhold their praife and admiration. Of what confequence was it to the people of Egypt, that Ali Bey had conquered the Said, Mecca, and Syria, if thefe conquefts only augmented, inftead of relieving their burthens? 'The expences incurred by thefe wars, increafed the contributions they were obliged to raife. The expedition againft Mecca alone coft twenty-fix millions of

+ French livres (above one million eighty-three thoufand
thoufand pounds), and the exportation of corn for the ufe of the armies, added to the monopoly of fome merchants in favour, caufed a famine, which defolated the country during the whole of the years 1770 and 1771 . When, therefore, the inhabitants of Cairo, and the peafants in the villages, were dying with hunger, what wonder if they murmured againft Ali Bey? Who can blame them for difapproving of the commerce with India, if all its advantages were to center in a few hands? When Ali Bey expended two hundred and twenty-five thoufand livres (above nine thoufand pounds), in the ufelefs handle of a kandjar ( $k$ ), though jewellers might applaud his magnificence, had not the people reafon to deteft his luxury? This liberality, which his courtiers called virtue, the people, at whofe expence it was exercifed, were juftly entitled to figmatize as vice, Had this man any merit in lavifhing what coft him nothing? Was it an act of juftice to gratify his favourite at the expence of the people, or repay with their money his private obligations, as in the cafe of his purveyor-

> (k) A poniard carried in the belt.

142 TRAVELSIN
general (l)? It muft be confeffed, that the greatef part of the actions of Ali Bey were founded much lefs on general principles of jultice and humanity, than perfonal motives of vanity and ambition. Egypt, in his eyes, was his private property, and the people a vile herd of worthlefs animals, of whom he might difpofe at his pleafure. Ought we then to be aftonifhed, if thofe whom he treated like an imperious mafter have vilified his fame like mercenary malecontents?
(l) Ali Bey, fetting out to go into exile, for he was exiled no lefs than three times, was encamped near Cairo, being allowed a delay of twenty-four hours, to pay his debts: a Janifary, named Haflan, to whom he owed five hundred fequins (one hundred and fifty-fix pounds), came to find him. Ali, thinking he wanted his money, began to make excufes. But Haffan, producing five hundred more fequins, faid to him, "Thou "6 art in misfo:tune, take thefe alfo." Ali, confounded with this generofity, fwore, by the head of the Prophet, that, if ever he returned, he would beftow on this man unexampled wealth; and, on his return, created him Purveyor-general : and though he was informed of the fcandalous extortions of Efanin, never even reprimanded him.

EGYPT AND SYRIA.

## C H A P. IX.

Summary of occurrences from the death of Ali Bey to the year 1785 .

Since the death of Ali Bey, the fate of the Egyptians has not been bettered; his fucceffors have not even imitated what was laudable in his conduct. Mohammad Bey, who fucceeded him in April 1773, during a reign of two years, difplayed nothing but the ferocity of a robber, and the bafenefs of a traitor. To colour his ingratitude towards his patron, he at firft pretended to be only the defender of the rights of the Sultan, and the minifter of his will ; he therefore remitted to Conftantinople the tribute which had been interrupted for the laft fix years, and tcok the cuftomary oath of unlimited obedience. He renewed his fubmiffion at the death of Ali Bey ; and, under pretext of proving his loyalty to the Sultan, demanded permiffion to make war on the Arab Daher. The Porte, who would gladly have folicited this, was happy to permit it as a favour: Mohammad was invefted
with the title of Pacha of Cairo, and every thing immediately prepared for this expedition. It may be afked what intereft an Egyptian Governor could have in deftroying the Arab Daher, in rebellion in Syria? But refined views of policy had no more fhare in this than in other meafures. It originated merely in private refentment. Mohammad Bey could not forget a reproachful letter written to him by Daher, at the time of the revolution of Damafcus, nor the part the Shaik had taken againft him in his quarrel with Ali Bey. To hatred was added the profpect of plunder. Ibrahin Sabbar (a), Daher's Minifter, was reputed to poffefs prodigious wealth; and the Egyptian, could he deftroy Daher, hoped equally to gratify his avarice and revenge.

He did not hefitate, therefore, to undertake this war, and made his preparations with all the activity which hatred infpires. He provided himfelf with an extracrdinary train of artillery, procured foreign gunners, and gave the command of them to an Englifhman,

[^4]named Robinfon; he brought from Suer a cannon fixteen feet in length, which had long remained ufelefs; and, at length, in the month of February, 1776 , appeared in Pa leftine, with an army equal to that he had formerly headed againft Damafcus. On his approach, Daher's forces, which occupied Gaza, defpairing of being able to defend it, retired; he took poffeffion of it, and, without ftopping, marched againft Yafa.' This town, which had a garrifon, and whofe inhabitants were all inured to war, fhewed more refolution than Gaza, and determined to fand the fiege. The hiftory of this fiege would well exemplify the ignorance of thefe countries in the art of war, as a few of the principal particulars will fufficiently evince.

Yafa, the ancient Joppa, is fituated on a part of the coaft the general level of which is very little above the fea. The city is built on an eminence, in the form of a fugar-loaf, in height about one hundred and thirty feet perpendicular. The houfes, diftributed on the declivity, appear rifing above each other, like the fteps of an amphitheatre. On the fummit is a fmall citadel, which commands the town; the bottom of the hill is furVol.I.
I.
rounded
rounded by a wall without a rampart, of twelve or fourteen feet high, and two or three in thicknefs. The battlements at the top are the only tokens by which it is diftinguifhable from a common garden-wall. This wall, which has no ditch, is environed by gardens, where lemons, oranges, and citrons, in this light foil, grow to a moft prodigious fize. Such was the city Mohammad undertonk to befiege. It was defended by five or fix hundred Safadians, and as many inhabitants, who, at fight of the enemy, armed themfelves with their fabres and mufkets; they had likewife a few brafs cannon, twenty-four pounders, without carriages; thefe they mounted, as well as they could, on timbers prepared in a hurry; and, fupplying the place of experience and addrefs by hatred and courage, replied to the fummons of the enemy by menaces and muket-fhot.

Mohammad, finding he muft have recourfe to force, formed his camp before the town; but was fo little acquainted with the bufinefs in which he was engaged that he advanced within half cannon fhot. The bullets, which fhowered upon the tents, apprized him of his error; he retreated, and, by making a fref experiment,
experiment, was convinced he was ftill too near; at length he difcovered the proper diftance, and fet up his tent, in which the moft extravagant luxury was difplayed : around it, without any order, were pitched thofe of the Mamlouks, while the Barbary Arabs formed huts with the trunks and branches of the orange and lemon trees, and the followers of the army arranged themfelves as they could: a few guards were diftributed here and there, and, without making a fingle entrenchment, they called themfelves encamped.

Batteries were now to be erected; and a jpot of rifing ground was made choice of, to the fouth-eaftward of the town, where, behind fome garden-walls, eight pieces of cannon were pointed, at two hundred paces from the town, and the firing began, notwithftanding the mufquetry of the enemy, who, from the tops of the terraces, killed feveral of the gunners. This conduct will appear fo fingu lar in Europe, that the truth of it may be, perhaps, called in queftion; but thefe things paffed eleven years ago; I have been on the fpot, have feen many who were eye-witneffes, and I efteem it a duty, neither to alter for the better or the worfe, facts, by which the

$$
L_{2}
$$

charader
character of a nation may fo well be eftimated.

It is evident, that a wall, only three feet thick, and without a rampart, muft foon have a large breach made in it ; and the queftion was, not how to mount, but how to get through it. The Mamlouks were for doing it on horfeback; but they were made to comprehend that this was impoffible; and they confented, for the firft time, to march on foot. It muft have been a curious fight to fee them, with their huge breeches of thick Venetian cloth, embarraffed with their tucked-up beniches, their crooked fabres in hand, and piftols hanging to their fides, advancing, and tumbling among the ruins of the wall. They imagined they had conquered every difficulty when they had furmounted this obftacle; hut the befieged, who formed a better judginent, waited till they arrived at the empty fpace between the city and the wall; there they aflailed them from the terraces, and the windows, of the houfes, with fuch a fhower of bullets, that the Mamlouks did not fo much as think of fetting them on fire, but retired, under a perfuafion that the breach was was utterly impracticable, fince it was impof-
EGYPT AND SYRIA.
fible to enter it on horfeback. Morad Bey brought them feveral times back to the charge, but in vain.

Six weeks paffed in this manner, and Mohammad was diftracted with rage, anxiety, and defpair. The befieged, however, whofe numbers were diminifhed by the repeated attacks, and who did not fee that any fuccours were to be expected from Acre, became weary of defending alone the caufe of Daher. The Muffulmen, efpecially, complained, that the Chriftians, regarding nothing but their prayers, were more in their churches than the field of battle. Some perfors began to treat with the enemy, and it was propofed to abandon the place, on the Egyptians giving hoftages. Conditions were agreed on, and the treaty might be confidered as concluded, when, in the midit of the fecurity occafioned by that belief, fome Mamlouks entered the city ; numbers followed them, and attempted to plunder; the inhabitants defended themfelves, and the attack recommenced: the whole army then ruhhed into the town, which fuffered all the horrors of war: women and children, young and old, all were cut to pieces; and Mohammad, equally mean and

$$
\text { L } 3 \text { barbarous, }
$$

barbarous, caufed a pyraniid, formed of the heads of thefe unfortunate fufferers, to be raifed as a monument of his victory. (b) It is faid the number of thefe exceeded twelve hundred. This cataftrophe, which happened the 19th of May, 1776, fpread terror through the country. Shaik Daher himfelf fled from Acre, the government of which he left to his fon Ali, whofe intrcpidity is ftill celebrated in Syria, but whofe glory is tarnifhed by his frequent rebellions againft his father. Ali imagined, that Mohammad would pay refpect to the treaty he had made with him ; but the Mamlouk, being arrived at the gates of Acre, declared, the price of his friendhip mult be the head of Daher himfelf. Ali, finding himfelf deceived, refufed to commit this parricide, and abandoned the town to the Egyptians, who gave it up to be plundered. The French merchants, with difficulty, procured an excmption, and foon faw themfelves in moft imminent danger. Mohammad, informed that the wealth of Ibrahim, Kiaya of Daher, had been depo-
(b) See Memoirs of Baron de Tott, Part IV.
EGYPT AND SYRIA。
fited with them, declared that, unlefs it was inftantly delivered up, they fhould all be put to death. The enfuing Sunday was the day appointed for this terrible refearch, when fortune happily freed them and Syria from the impending danger, for Mohammad was feized with a malignant fever, and died, after two days illnefs, in the prime of his age (c).

The Chriftians of Syria are perfuaded his death was a punifhment of the Prophet Elias, whore church, on Mount Carmel, he had violated. They even affirm the prophet appeared to him feveral times in the form of an old man, and that Mohammad was afterwards continually exclaiming-"Take from " me that old man, who diftreffes and terrifies " me." But they who faw this General in his laft moments, have reported at Cairo, to perfons worthy of credit, that this vifion, the effects of a delirium, was caufed by the confcioufnefs of fome private murders: indeed, the death of Mohammad may eafily be accounted for from natural caufes, and is to be attributed to the known unhealthinefs of the climate, exceffive heat, immoderate fatigue, and the
(c) In the month of June, 1776:
anxiety occafioned by the fiege of Yafa. It may not be improper to remark, in this place, that were we to write the memoirs of modern times, as dictated by the Chriftians of Syria and Egypt, they would no lefs abound in prodigies and apparitions, than the hiftories of antiquity.

The death of Mohammad was no fooner known than this whole army made a precipitate retreat, fimilar to that of Damafcus, and tumultuoufly took the road to Egypt. Morad Bey, who had acquired great credit by the favour of Moharnmad, haftened to regain Cairo, that he might be enabled to difpute the fupreme command with Ibrahim Bey. The latter, alfo a freed-man and favourite of the deceafed, no fooner learnt the ftate of affairs, than he took meafures to fecure an authority with which he had been entrufted in the abfence of his patron. Every appearance threatened open war; but the two rivals, when each came to confider the power and refources of theother, found themfelves fo equal, as to make them dread the iffue of a combat. They determined therefore on peace, and entered into an agreement, by which the authority was to be divided, on condition that Ibrahim thould re-
tain the title of Shaik-el-Beled: this arrangement was dictated by their common intereft. Since the death of Ali Bey, the Beys and the Cachefs, who owed their promotion to his houfe ( $a$ ), had repined in fecret at feeing all the authority paffed into the hands of a new faction: the power poffeffed by Mohammad, formerly their equal, had hurt their pride, and thatof his $\mathbb{A}$ aves appeared to them fill more infupportable: they refolved, therefore, to Thake off this yoke, and entered into intrigues and cabals, which terminated in a union of the parties under the title of the Houfe of Ali Bey. The chiefs were Haffan Bey, formerly Governor of Djedda, and furnamed, on that account, El-djed-daoui; he had for his colleague Ifmael, the only remaining Bey of thofe created by Ibrahim Kiaya. Thefe confederates conducted their plot fo well that Morad and Ibrahim were obliged to abandon Cairo, and retire into the Said, where they were exiled; but, being foon reinforced by the refugees, who joined them, they returned, and routed their enemies, who were three
(a) That is to fay, of whom he had been the patron: among the Mamlouks, the freed-man is called the child of the boufe.

154 TRAVELS IN
times their number. Ifmael and Haffan, expelled in their turn, fled into the Said, where they fill remain. Morad and Ibrahim, jealous of this party, have made feveral efforts to defroy it, without fuccefs. They at laft granted to the rebels a diftrict above Djirdja; but the Mamlouks, who continually long for the luxuries of Cairo, having made fome movements in 1783 , Morad Bey thought it neceffary to make a frefh attempt to exterminate them, and I arrived at the time when he was making his preparations. His adherents, difperfed along the Nile, ftopped all the boats they met, and, ftaff-in-hand, forced the wretched proprietors to follow them to Cairo. Every body fled from a fervice which was to produce them no profit. In the city a contribution of five hundred thoufand dahlers ( $a$ ) was impofed upon commerce ; the bakers and different tradefmen were compelled to furnifh their commodities below prime coft, and all thefe extortions, fo odious in Europe, were deemed mere matters of courfe in Egypt.

Every thing was ready in the beginning of
(a) Two million, fix hundred and twenty-five thoufand livres, (109,375l.)
April,

April, and Morad fet out for the Said. The advices from Confantinople, and the gazettes of Europe, which re-echoed them, reprefented this expedition, at the time, as an important war, and the force of Morad as a powerful army, and it was fo relatively to the forces he could raife and the fituation of Egypt; but it is no lefs true that it did not exceed two thoufand horfemen. To obferve the conftant falfification of news at Conftantinople, one would believe, either that the Turks of the capital are wholly ignorant of the affairs of Egypt and Syria, or that they wifh to impofe on the Europeans. The little communication there is between them and thefe remote provinces of the empire renders the former fuppofition more probable than the latter. On the other hand, it fhould feem as if our merchants, who refide in the different factories, might procure us authentic information; but they, hut up in their kans, as in prifons, concern themfelves but little with what is foreign to their commerce, and content themfelves with laughing at the newfpapers they receive from Europe. Sometimes they have attempted to rectify there errors; but their information was fo ill-employed,
ployed that they have abandoned fo troubleforme and unprofitable an undertaking.

Morad, leaving Cairo, led his cavalry, by forced marches, along the river; his baggage and ftores followed him in boats; and the north-wind, which is always moft prevalent, was favourable to his defigns. The exiles, to the number of five hundred, were pofted above Djirdja. They no fooner were apprized of the enemy's approach than they became a prey to diffenfion; fome were for fighting, and others advifed to capitulate; feveral of them even adopted the latter meafure, and furrendered to Morad Bey: but Haffan and Ifmael, continuing inflexible, removed up the river towards A fouan, followed by about two hundred and fifty horfe. Morad purfued them almof to the Cataract, where they took poft fo advantageoufly, on rocky precipices, that the Mamlouks, utterly ignorant how to conduct a war of polts, held it impoffible to force them. Befides, Morad, dreading left too long an abfence from Cairo might give encouragement to new projects, hatened to return thither ; and the exiles, delivered from their embarraffment, returned likewife to their former ftation in the Said.
EGYPT AND SYRIA.

In a fociety where the paffions of individuals are not directed to one general end, where each man, attentive only to himfelf, confiders the uncertainty of the next day, merely as a motive to improve the advantage of the moment; where the chiefs, imprefling no fentiment of refpect, are unable to maintain fubordination; in fuch a fociety, a fixed and regular ftate of affairs is impoffible; and the inceflant jarring of the incoherent parts muft give a perpetual vibration to the whole machine: this is what continually happens among the body of the Mamlouks at Cairo. Scarcely was Morad returned, when a new combination of interefts excited new troubles; befides his faction, and thofe of Ibrahim, and the houfe of Ali Bey, there were, at Cairo, other Beys allied to other houfes. Thefe Beys, who from their individual weaknefs were neglected by the ruling Beys, thought proper, in the month of July, 1783 , to unite their hitherto detached forces, and form a party, which alfo had its pretenfions to fovereign power. This league, however, was difcovered too foon, and the leaders, to the number of five, found themfelves unexpectedly exiled to the Delta. To this order they feigned fubmiffion;
miffion ; but they had farcely left the city, before they took the route of the Said, the ufual and convenient afylum of all the malecontents: they were purfued to no purpofe for a day, through the defert of the Pyramids; but they efcaped both the Mamlouks and Arabs, and arrived fafe at Miniah, where they took up their refidence.

This village, fituated forty leagues above Cairo, on the banks of the Nile, which it commands, was well calculated to promote their defigns. Mafters of the river, they could ftop every thing which came from the Said; and they availed themfelves of this advantage : the corn, annually fent from that province, at this feafon, was a favourable circumftance; this they feized; and Cairo, deprived of provifions, was in danger of a famine; while the Beys, and others whofe lands lay in, or beyond, the province of Fayoum, no longer received their revenues, as the cxiles had laid them under contribution. To remove there evils, a new expedition was neceflary. Morad Bey, fatigued with the former, refufed to undertake a fecond; and Ibrahim Bey took it on himfelf. In the month of Auguft, notwith-
EGYPT AND SYRIA.
ftanding the Ramadan, the preparations were begun ; all the boats, and their owners, were feized on, as before. Contributions were levied, and the dealers compelled to fupply the troops.

At length, in the beginning of October, Ibrahim fet out with an army which was thought formidable, fince it confifted of about three thoufand cavalry. It was refolved to go down the Nile, the waters of the inundation having not yet left the whole country, and the ground continuing to be marhy. In a few days the armies came in fight of each other; but Ibrahim, who had not the fame fondnefs for war with Morad, did not attack the confederates ; he entered into a negociation, and concluded a verbal treaty, the conditions of which were the return of the Beys, and their re-eftablifhment. Mosad, who fufpected fome plot againft himfelf, was much diffatisfied with this convention; diftruft took place more than ever between him and his rival; and the arrogance difplayed by the exiles, in a general Divan, fill more increafed his fears. He thought himfelf betrayed, and, to fecure himfelf from treachery, fet out from Cairo with his ad-
herents,
herents, and retired into the Said. Open war was expected to be the confequence, but Ibrabim temporized, and, at the end of four months, Morad advanced to Djiza, as if to decide the quarrel by a battle.

For five-and-iwenty days the two parties, feparated by the river, remained oppofite each other, without attempting any thing. A treaty was propofed, but Morad, diffatiffied with the conditions, and too weak to dictate others, returned into the Said, whither he was followed by deputies, who, after four months negociation, at length fucceeded in bringing him back to Cairo: the conditions ftipulated were, that he fhould continue to fhare the authority with Ibrahim, and that the five Beys hould be deprived of their poffeffions. Thefe Beys, perceiving they were given up by Ibrahim, took to flight; Morad purfued them, and the Arabs of the defert, having taken them, he brought them back to Cairo, that they might be under his eyc. Peace now feemed re-eftablithed; but what had paffed between the two chiefs had too clearly manifefted their refpective views, to fuffer them to continue friends; and each, well convinced that his rival was only watch-

$$
\text { EGYPT AND SYRIA. } 16 \mathrm{r}
$$

ing an opportunity to defroy him, kept conftantly on his guard, either to avoid or endeavour a furprize.

Thefe fecret machinations obliged Morad Bey again to quit Cairo, in 1784 ; but, forming his camp clofe to the gates, he appeared fo determined, that Ibrahim, terrified in his turn, fled with his partifans into the Said, where he remained till March 1785 , when, in confequence of a new treaty, he returned to Cairo, where he now fhares, as formerly, the fupreme authority with his rival, until fome frefh intrigue Chall afford him an opportunity of taking his revenge. Such is the fummary of the revolutions which have taken place in Egypt for fome years paft. I have not circumftantially related the various incidents of thefe events, becaufe, not to mention their uncertainty, they can neither intereft nor convey information. The whole is a tiffue of cabals, intrigues, treachery, and murthers, which could only weary the reader in the repetition ; it is fufficient if he is acquainted with the leading facts, and is en. abled from them to form juft ideas of the manners and political ftate of the country, which fubjeit I fhall now proceed to difcufs more amply.

## C H A P. X.

## Prefent State of Egypt.

SINCE the revolution of Ibrahim Kiaya, and efpecially fince the revolt of Ali Bey, the Ottoman power has become more precarious in Egypt than in any other province. It is true the Porte fill retains there a Pacha; but this Pacha, confined and watched in the caftle of Cairo, is rather the prifoner of the Mamlouks, than the reprefentative of the Sultan. He is depofed, exiled, or expelled at pleafure ; and, on the mere fummons of a herald, clothed in black ( $a$ ), muft defcend ( $b$ ) from his high ftation. Some Pachas, chofen exprefsly for that purpofe by the Porte, have endeavoured, by fecret intrigues, to recover the power formerly annexed to their title; but the Beys have rendered all fuch attempts fo dangerous, that they now fubmit quietly to their three years captivity, and confine themfelves to the peaceable enjoyment of their falary and emoluments.
(a) This officer is named Caracoulouk.
(b) The formulary of depofition confifts in the word enzel, that is, defcend from the caltle.
EGYPT AND SYRIA.

The Beys, however, apprehenfive of driving the Porte to adopt fome violent meafure, dare not declare their independence. Every thing continues to be tranfacted in the name of the Sultan; his orders are received, as they exprefs it, on the bead and on the eyes; that is with the greateft refpect; but this ridiculous appearance of reverence is never followed by obedience. The tribute is frequently intermitted, and always undergoes great deductions. Various expences are carried to account, fuch as the maintenance of the canals, the carriage of the rubbith of Cairo to the fea, the pay of the troops, the repair of the mofques, \&cc. \&c. which are all fo many falre and pretended charges. Deceit is practifed refpecting the degree of inundation; and nothing flort of the dread inipired by the Turkifh Caravelles, which come annually to Damietta and Alexandria, could procure the contribution of rice and grain: even in this too, means are found to diminith the effective fupplies, by a collufion with thofe appointed to receive them. On the other hand, the Porte, abiding by her ufual policy, is blind to all thefe abufes, well knowing, that to correct them, will require expenfive efforts, and pof-
fibly an open war, in which the dignity of the empire might fuffer confiderably. Cther, and more urgent affairs, have, befides, forced the Turks, for fome years paft, to collect all their forces towards the North. Obliged to beftow all their attention on their immediate fafety in Confantinople, they leave the reftoration of their authority in the diftant provinces to time, and the courfe of events. They take care, however, to foment divifions among the rival parties, that none of them may acquire an eftablifhed power; and this method has been found equally beneficial to the ftate, and advantageous to the great officers, who derive large profits from the rebels, by felling them their influence and protection. The prefent Admiral, Hafan Pacha, has more than once availed himfelf of this practice, fo as to obtain confiderable fums from Ibrahim and Morad.

## EGYPT AND SYRIA. 165

## C H A P. XI.

## Military Confitution of the Mamlouks.

THE Mamlouks, on obtaining the government of Egypt, adopted meafures which feem to fecure to them the poffeffion of the country. The moft efficacious is the precaution they have taken to degrade the military corps of the Azabs and Janiffaries: Thefe two bodies, which were formerly the terror of the Pacha, are now as infignificant as himfelf. Of this the corrupt and wretched government of the Turks has alone been the caufe; for, previous to the infurrection of Ibrahim Kiaya, the number of Turkih troops, which hould confift of forty thoufand men, infantry and cavalry, had been reduced to lefs than half that number, by the avarice of their officers, who diverted the pay to their own ufe. After Ibrahim, Ali Bey completely deftroyed their confequence. He firft difplaced all the officers who gave him umbrage; left unfilled the places that became
vacant ; deprived the commanders of all influence; and fo degraded all the Turkifh troops, that at this day the Janiffaries, the Azabs, and the five other corps, are only a rabble of artizans and vagabonds, who guard the gates of thofe who pay them, and tremble in the prefence of the Mamlouks, as much as the populace of Cairo. The whole military force of Egypt really confifts in the Marnlouks. Some hundreds of thefe are difperfed throughout the country, and in the villages, to maintain the authority of their corps, collect the tributes, and improve every opportunity of extortion; but the main body continually remains at Cairo. From the computation of well-informed perfons, it appears, their number cannot exceed eight thoufand five hundred men, reckoning Beys and Cachefs, common freed-men, and Mamlouks, who are fill flaves. In this number there are a multitude of youth under twenty and twenty-two years of age.

The mof powerful houfe is that of Ibrahim Bey, who has about fix hundred Mamlouks. Next to him is Mourad, who has not above four hundred, but who, by his audacity and prodigality, forms a counterpoife
EGYPT AND SYR1A.
poife to the infatiable avarice of his rival: the reft of the Beys, to the number of eighteen or twenty, have each of them from fifty to two hundred. Befides thefe, there is a great number of Mamlouks who may be called individual, who being fprung from houfes which are extinct, attach themfelves fometimes to one, and fometimes to another, as they find it their intereft, and are always ready to enter into the fervice of the beft bidder. We muft reckon likewife fome Serradjes, a fort of domeftics on horfeback, who carry the orders of the Beys; but the whole together does not exceed ten thoufand horfe. No mention is here made of infantry, which is neither known nor efteemed in Turkey, efpecially in the Afiatic provinces. The prejudices of the ancient Perfians, and of the Tartars, ftill prevail in thofe countries, where war, confifting only in flight and purfuit, the horfeman, who is belt qualified for both thefe, is reputed the only foldier; and as, among Barbarians, the warrior is alone the man of diftinction; to walk on foot is held to be degrading, and is, for that reafon, referved for the common people. The Mamlouks, therefore, permit the inhabitants of

Egypt to be carried only by mules or affes (c), referving to themfelves the exclufive privilege of riding on horfeback; and of this they make fufficient ufe; for whether they are in town or the country, or if they only make a vifit to the next door, they are never feen but on horfeback. Their drefs, as well as the fupport of their dignity, obliges them to this. This drefs, which does not differ from that of every other perfon in eafy circumftances in Turkey, deferves to be defcribed.
SECT. I.

## Drefs of the Mamlu $u k s$.

Firt, they have a wide fhirt of thin cotton, of a yellowifh colour, over which they wear a fort of gown of Indian linen, or the
(c) The Franks of all nations are fubjected to the fame humiliating reftriction, but, by proper management, and liberal prefents, this may be got over by ftrangers of confequence, who come only to vifit the country. Lord Algernon Percy, now Lord Louvaine, and the Eail of Cibal lomont, obtained permiffion to ride on horfeback in 1776. - See Colonel Capper's excellent little work, p. $3^{1 .}$ T.
light ftuffs of Damafcus and Aleppo. This robe, called antari, defcends from the neck to the ankles, and folds over the fore-part of the body, towards the hips, where it is faftened by two ftrings. Over this firtt covering is a fecond, of the fame form and width, the ample neeves of which defcend likewife to the finger ends. This is called a coftan, and is ufually made of filk Auff, richer than the former. Both thefe are faftened at the waift by a long belt, which divides the whole drefs into two bundles. Above them is a third, which is called djouba, which is of cloth without lining, and is made nearly in the fame manner, only the neeves are cut at the elbow. In winter, nay frequently even in fummer, this djouba is lined with fur, and is converted into a peliffe. Laftly, over thefe three wrappers, they put on an outer garment, called the beniche. This is the cloak or robe of ceremony, and completely covers the whole body, even the ends of the fingers, which it would be deemed highly indecent to fuffer to appear before the great. The whole habit, when the beniche is on, has the appearance of a long fack, from out of which is thruft a
bare neck, and a bald head, covered with a turban. The turban of the Mamlouks, called a Kaouk, is of a cylindrical fhape, yellow, and turned up on the outfide with a roll of mullin artificially folded. On their feet, they wear a fock of yellow leather, which reaches up to the heels, and flippers without quarters, always liable to be left on the road. But the moft fingular part of this drefs is a fort of pantaloon, or trowfers, fo long as to reach up to the chin, and fo wide, that each of the legs is large enough to contain the whole body, and made of that kind of Venetian cloth which the French call faille, which, although as pliant as the d'Elbouf cloth, is thicker than the burre of Rouen; and that they may walk more at their eafe, they faften, with a running fath, all the loofe parts of the drefs I have been defcribing. Thus fwaddled, we may imagine the Mamlouks are not very active walkers; and thofe who are not acquainted by experience with the prejudices of different countries, will find it fearcely poffible to believe, what however is the fact, that they look on this drefs as exceedingly commodious. In vain may we object that it hinders them crom walking,
EGYPT AND SYRIA.
and encumbers them, unneceffarily, on horfeback, and that in battle a horfeman, once difmounted, is a loft man. They reply, It is the cuftom, and every objection is anfwered.

$$
S \text { E C T. II. }
$$

Horfe accoutrements of the Mamlouks.
Let us now examine, whether their horfe accoutrements are more rational. Since the Europeans have had the good fenfe to examine the principles of every art, they have found that the horfe, in order to move freely under his rider, fhould be as little harneffed as the folidity neceffary would permit. This improvement, which has taken place among us in the eighteenth century, is fill very far from being adopted by the Mamlouks, who have fcarcely arrived at the knowledge of the ninth. Continuaily the flaves of cuftom, the horfe's faddle among them is a clumfy frame, loaded with wood, leather, and iron, on which a truffequin rifes behind, eight inches in height above the hips of the horfeman. A pummel before projects four or five inches, fo as to endanger
his breaft, hould he fonp. Under the faddle, inftead of a ftuffed frame, they fpread three thick woollen coverings, and the whole is faftened by a furcingle, which, inftead of a buckle, is tied with leather thongs, in very complicated knots, and liable to flip. They ufe no crupper, but have a large martingale, which throws them on the fhoulders of the horfe. Each firrup is a plate of copper longer and wider than the foot, with circular edges, an inch high in the middle, and gradually declining toward each end; the edges are fharp, and are ufed, inftead of fpurs, to make long wounds in the horfe's fides. The common weight of a pair of thefe ftirrups is between nine and ten pounds, and frequently exceeds twelve or thirteen. The faddle and faddle-cloths do not weigh lefs than five-and-twenty; thus the horfe's furniture weighs above fix-and-thirty pounds, which is fo much the more ridiculous, as the Egyptian horfes are very fmall.

The bridle is equally ill contrived; it is a kind of fuaffle, but without a joint, and with a curb, which, being only an iron ring, binds the ja fo as to lacerate the fkin, fo that the bars are injured, and the horfe abfolutely
folutely has no mouth. This neceffarily refults from the practice of the Mamlouks, who, inftead of managing the mouth, like us, deftroy it by violent and fudden checks, which they employ particularly in a manœuvre peculiar to them. This confifts in putting the horfe on a full gallop, and fuddenly ftopping him, when at his higheft fpeed. Checked thus by the bit, the horfe bends in his hind legs, ftiffens the fore, and flides along like a horfe of wood. How much this manœuvre muft injure the legs and mouth may eafily be conceived; but the Mamlouks think it graceful, and it is adapted to their mode of fighting. Notwithftanding however their fhort ftirrups, and the perpetual motion of their bodies, it cannot be denied that they are firm and vigorous horfemen, and that they have a warlike appearance, which pleafes the eye even of a ftranger ; it muft alfo be allowed, they have fhewn more judgment in the choice of their arms.
SECT.
S E C T. III.

> Armes of the Mamlouks.

Their principal weapon is an Englifh carbine about thirty inches long, and of fo large a bore as to difcharge ten or twelve balls at a time, which, even without fkill, cannot fail of great execution. They befides carry at their belt two large piftols, which are faftened to fome part of their garments by a filk ftring. At the bow of the faddle fometimes hangs a heavy mace, to knock down their enemy, and on the left thigh is fufpended, by a fhoulder-belt, a crooked fabre, of a kind little known in Europe ; the length of the blade, in a right line, from the hilt to the point, is not more than twenty-four inches, but meafured in the curve is at leaft thirty. This form, which appears whimfical to us, has not been adopted without motives; experience teaches us, that the effect of a ftrait blade is limited to the place and moment of its fall, as it acts merely from preflure: a crooked blade, on the contrary, prefenting its edge in retiring,
tiring, flides by the effort of the arm, and continues its action longer. The Barbarians, who generally apply themfelves mot to the deftructive arts, have not fuffered this obfervation to efcape them; and hence the ufe of fcymetars, fo general and fo ancient in the Eaftern world. The Mamlouks commonly procure theirs from Conftantinople, and from Europe; but the Beys rival each other in Perfian blades, and in fabres of the ancient fteel of Damafcus (b), for which they frequently pay as high as forty or fifty pounds fterling. The qualities they efteem in them are lightnefs, the equality and ring of the temper, the waving of the iron, and, above all, the keennefs of the edge, which it muft be allowed is exquifite; but thefe blades have the defect of being as brittle as glafs.

$$
S \text { ec t. IV. }
$$

Education and Exercifes of the Mamlouks.
The art of ufing thefe arms conftitutes the education of the Mamlouks, and the whole occupation of their lives. Every day, early
(b) I fay ancient, fur fteel is now no longer made there.
in the morning, the greater part of them refort to a plain, without Cairo, and there, riding full fpeed, exercife themfelves in drawing out their carbine expeditioufly from the bandaleer, difcharging it with good aim, and then throwing it under their thigh, to feize a piftol, which they fire and throw over their fhoulder; immediately firing a fecond, and throwing it in the fame manner, trufting to the ftring by which they are faftened, without lofing time to return them to their place. The Beys who are prefent encourage them; and whoever breaks the earthen veffel which ferves by way of butt, receives great commendations and money, as a recompenfe. They practife alfo the management of the fabre, and efpecially the coup de revers which cuts upwards, and is the mort difficult to parry. Their blades are fo keen, and they handle them fo well, that many of them can cut a clew of wet cotton, like a piece of butter. They likewife fhoot with bows and arrows, though they no longer ufe them in battle ; but their favourite exercife is throw. ing the djerid: this word, which propenly means a reed, is generally ufed to fignify any Aaff thrown by the hand, after the manner of
the Roman pilum. Inftead of a Raff, the Mamlouks make ufe of branches of the palmtree, frefh ftripped. Thefe branches, which have the form of the falk of an artichoke, are four feet long, and weigh five or fix pounds. Armed with thefe, the Cavaliers enter the lifts, and, riding full fpeed, throw them at each other from a confiderable diftance. The affailant, as foon as he has thrown, turns his horie, and his antagonift purfues, and throws his in his turn. The horfes, accuftomed to this exercife, fecond their mafters fo well, that they feem alfo to fhare in the pleafure. But this pleafure is attended with danger; for fome can dart this weapon with fo much force, as frequently to wound, and fometimes mortally. Ill-fated was the man who could not efcape the djerid of Ali Bey! Thefe fports, which to us feem barbarous, are intimately connected with the political fate of nations. Not three centuries ago they exifted among ourfelves, and their being laid afide is lefs owing to the accident of Henry the Second, or to a fpirit of philofophy, than to the fate of internal peace which has rendered them ufelefs. Among

[^5]178 TRAVELS IN
the Turks and Mamlouks, on the contrary, they are retained, becaufe the anarchyy in which they live continues to render whatever relates to the art of war abfolutely neceffary. Let us now confider whether their progrefs in this art be proportionate to their practice.

$$
S E C T . V \text {. }
$$

Military Kill of the Mamlouks.
In Europe, when we hear of troops, and of war, we immediately figure to ourfelves a number of men diftributed into companies, battalions, and fquadrons; with uniforms well fitted, and of different colours, ranks and lines formed, combinations of particular manœuvres, or general evolutions; and, in a word, a complete fyltem of operations founded on eftablifhed principles. Thefe ideas are juft, relative to ourfelves, but, when applied to the countries of which we are treating, are crroncous indeed. The Mamlcuks know nothing of our military arts; they have neither uniforms, nor order, nor difcipline, nor cven fuhordination. Their troops are a mob,
EGYPT AND SYRIA.
their march a riot, their battles duels, and their war a fcene of robbery and plunder, which ordinarily begins even in the very city of Cairo; and, at the moment when there is the leaft reafon to expect it. A cabal gathers together, the Beys mount on horieback, the alarm fpreads, and their adverfaries appear: they charge each other in the ftreet, fabre in hand; a few murthers decide the quarrel, and the weakeft or moft timid is exiled. The people are mere cyphers in thefe affrays. Of what importance is it to them that their tyrants cut each others throats? But it muft not be imagined that they ftand by indifferent fpectators, that would be too dangerous in the midft of bullets and fcymetars; every one makes his efcape from the fcene of action till tranquillity is reftored. Sometimes the populace pillage the houfes of the exiled, which the conquerors never attempt to prevent. And it will not be improper here to obferve, that the phrafes employed in the European Gazettes, fuch as "The Beys bave "raifed recruits, the Beys bave excited the "people to revolt, the Beys bave favoured one "party," are ill calculated to furbin accurate ideas. In the differences of the Beys, $\mathrm{N}_{2}$ the
the people are never any thing more than merely paffive inftruments.

Sometimes the war is transferred to the country, but the art and conduct of the combatants is not more confpicuous. The ftrongeft, or moft daring party purfues the other. If they are equal in courage, they wait for each other, or appoint a rendezvous, where, without regarding the advantages of fituation, the refpective troops affemble in platoons, the boldeft marching at their head. They advance towards their enemies, mutual defiances pafs, the attack begins, and every one choofes his man : they fire, if they can, and prefently fall on with the fabre: it is then the manageablenefs of the horfe and dexterity of the cavalier are difplayed. If the former falls, the deftruction of the latter is inevitable. In defeats, the valets, who are always prefent, remount their maters; and if there are no witneffes near, frequently knock them on the head to obtain the fequins they never fail to carry. The battle is often decided by the death of two or three of the combatants. Of late years, efpecially, the Manlouks feem convinced, that as their patrons are the perfons principally interefted, they
they ought to encounter the greateft dangers, and therefore prefently leave them the enjoyment of that honour. If they gain the advantage, fo much the better for all concerned ; if they are overcome, they capitulate with the conqueror, who frequently makes his conditions before hand. There is nothing to be gained but by remaining quiet; they are fure of finding a mafter who pays, and they return to Cairo to live at his expence until fome new revolution takes place.
S e с т. VI.

Difcipline of the Mamlouks.
The interefted and inconftant character of this militia, is a neceffary confequence of its origin and conftitution. The young peafant, fold in Mingrelia or Georgia, no fooner arrives in Egypt, than his ideas undergo a total alteration. A new and extraordinary fcene opens before him, where every thing conduces to awaken his audacity and ambition; though now a flave, he feems deftined to become a mafter, and already aflumes the

$$
\mathrm{N}_{3} \quad \text { fpirit }
$$

182 TRAVELS IN
fpirit of his future condition. He calculates how far he is neceffary to his patron, and obliges him to purchafe his fervices and his zeal; there he meafures by the falary he receives, or that which he expects; and as in fuch fates money is the only motive, the chief attention of the mafter is to fatisfy the avidity of his fervants, in order to fecure their attachment. Hence, that prodigality of the Beys, fo ruinous to Egypt, which they pillage; that want of fubordination in the Mamlouks, fo fatal to the chiefs whom they defpoil ; and thore intrigues, which never ceafe to agitate the whole nation. No fooner is a flave enfranchifed than he afpires to the principal employments; and, who is to oppofe his pretenfions? In thofe who command, he difcovers no fuperiority of talents which can imprefs him with sefpeet; in them he only fees foldiers like himfelf, arrived at power by tbe decrees of fate; and if it pleafe fate to favour him, he will attain it alfo, nor will he be lefs able in the art of governing, which confifts only in taking money, and giving blows with the fabre.

From this fyftem alfo has arifen an unbridled luxury, which, indulging the gratifi-

$$
\text { EGYPT AND SYRIA. } \quad 183
$$

cation of every imaginary want, has opened an unlimited field to the rapacity of the great. This luxury is fo exceffive, that there is not a Mamlouk, whofe maintenance cofts lefs than twenty-five hundred livres (a hundred and four pounds) annually, and many of them coft double that fum. At every return of the Ramadan, they muft have a new fuit, French and Venetian cloths, and Damafcus and India ftuffs. They muft often likewife be provided with new horfes and harnefs. They muft have pifols and fabres from Damafcus, gilt tirrups, and faddles and bridles plated with filver. The chiefs, to diftinguifh them from the vulgar, muf have trinkets, precious fones, Arabian horfes of two or three hundred pounds value, thawls of Cafhmire worth from five-and-twenty to fifty poundseach, and a variety of peliffes, the cheapeft of which cofts above twenty pounds (e). The women have rejected the ancient cuftom of wearing fequins on the head and breaft, as not fufficiently fplendid and coftly, and in their ftead
(e) The European merchants, who have adopted this luxury, do not think they have a decent wardrobe, unlefs its value exceeds tweive or fifteen thouland lives (five or fix hundred pounds.)
have fubfituted diamonds, emeralds, rubies, and the fineft pearls; and to their fondnefs of fhawls and furs, have added a paffion for Lycns ftuffs and laces. When fuch luxuries are become the neceflaries of thofe whofe authority is without controul, and who neither refpect the rights of property, nor the life of their inferiors, it is eafy to conceive what mut be the condition of their fubjects who are obliged to furnifh them with whatever their caprice may require.
S e c t. VII.

## Manners of the Mamlouks.

The manners of the Mamlouks are fuch, that though I fhall frictly adhere to truth, I am almof afraid I fhall be fufpected of prejudice and cxaggeration. Born for the moft part in the rites of the Greek church, and circumcifed the moment they are bought, they are confidered by the Turks themfelves as Renegadoes, void of faith and of religion. Strangers to each other, they are not bound by thofe natural ties which unite the reft of mankind.

Without
EGYPT AND SYRIA.

Without parents, without children, the paft has done nothing for them, and they do nothing for the future. Ignorant and fuperflitious from education, they become ferocious from the murders they commit, perfidious from frequent cabals, feditious from tumults, and bafe, deceitful, and corrupted by every fpecies of debauchery. They are, above all, addicted to that abominable wickednefs which was at all times the vice of the Greeks and of the Tartars, and is the firft leffon they receive from their mafters. It is difficult to account for this tafte, when we confider that they all have women, unlefs we fuppofe they feek in one fex, that poignancy of refufal which they do not permit the other. It is however very certain, that there is not a fingle Mamlouk but is polluted by this depravity; and the contagion has fpread among the inhabitants of Cairo, and even the Chriftians of Syria who refide in that city.

## C H A P. XII.

## Government of the Mamlouks.

SUCH are the men who at prefent govern and decide the fate of Egypt : a few lucky Atrokes of the fabre, a greater portion of cunning, or audacity, have conferred on thein this pre-eminence; but it is not to be imagined that in changing fortune thefe upfarts change their character; they have ftill the meannefs of flaves, though advanced to the rank of monarchs. Sovereignty with them is not the difficult art of directing to one common object the various paffions of a numerous fociety, but only the means of poffeffing more women, more toys, horfes, and flaves, and fatisfying all their caprices. The whole adminiftration, internal and external, is conducted on this principle. It confifts in managing the Court of Conftantinople, fo as to clude the tribute, or the menaces of the Sultan; and in purchafing a number of flaves, multiplying partifans, countermining plots, and deftroying their fecret enemies by the dagger, or by poifon. Ever tortured by the
the anxiety of fufpicion, the chiefs live like the ancient tyrants of Syracufe. Morad and Ibrahim fleep continually in the midft of carbines and fabres, nor have they any idea of police or public order (a). Their only employment is to procure money; and the method confidered as the moft fimple, is to feize it wherever it is to be found, to wreft it by violence from its poffeffor, and to impofe arbitrary contributions every moment on the villages, and on the cuftom-houfe, which, in its turn, levies them again upon commerce.
S E C T. I.

Condition of the people in Egypt.
We may eafily judge that in fuch a country, every thing is analogous to fo wretched
(a) When I was at Cairo, fome Mamlouks carried off the wife of a Jew, who was paffing the Nile with her hußand. The Jew having complained to Morad, that Bey replicd in his rough tone of voice: Well, let the young folks amufo themfelves! In the evening, the Mamlouks acquainted the Jew that they would reftore him his wife if he would pay them one hundred piafters for their trouble; and to this he was obliged to fubmit. This infance is the more in point, fince in this country women are held more facred than life itfelf.
a government. Wherever the cultivator en= joys not the fruit of his labour, he works only by conftraint, and agriculture languifhes: Wherever there is no fecurity in property, there can be no induftry to procure it, and the arts muft remain in their infancy. Wherever knowledge has no object, men will do nothing to acquire it, and their minds will continue in a fate of barbarifm. Such is the condition of Egypt. The greater part of the lands are in the hands of the Beys, the Mamlouks, and the profeffors of the law ; the number of the other proprietors is extremely fmall, and their property liable to a thoufand impofitions. Every moment fome contribution is to be paid, or fome damage repaired; there is no right of fucceffion or inheritance for real property; every thing returns to government, from which every thing muft be re-purchafed. The peafants are hired labourers, to whom no more is left than barely fuffices to fuftain life. The rice and corn they gather are carried to the table of their mafters, and nothing referved for them but dourra or Indian millet, of which they make a bread without leaven, which is taftelefs when cold. This bread, baked
baked by a fire kindled with the dried dung of buffalces and cows ( $f$ ), is, with water and raw onions, their only food throughout the year; and they efteem themfelves happy if they can fometimes procure a little honey, cheefe, four milk, and dates. Flefh meat, and fat, which they are paffionately fond of, make their appearance only on the great feftivals, and among thofe who are in the beft circumftances.

Their whole clothing confifts in a Mirt of coarfe blue linen, and in a clumfy black cloak. Their head-drefs is a fort of cloth bonnet, over which they roll a long handkerchief of red woollen. Their arms, legs and breafts, are naked, and the greateft part of them do not even wear drawers. Their habitations are mud-walled huts, in which they are fuffocated with heat and fmoke, and frequently attacked by maladies arifing from uncleannefs, humidity, and unwholefome food; and, to fill the meafure of their wretchednefs, to thefe phyfical evils are added continual alarms, the dread of the robberies of
(f) The reader will recolleet that Egypt is a naked country, which affords no fire-wood.
the Arabs, and the extortions of the Mamlouks, family feuds, and all the anxieties of a perpetual civil war.

This is a juft picture of all the villages, and equally refembles the towns. At Cairo itfelf, the ftranger, on his arrival, is ftruck with the univerfal appearance of wretchednefs and mifery. The crowds which throng the the ftreets, prefent to his fight nothing but hideous rags, and difgufting nudities. It is true, he often meets with horfemen richly clad; but this difplay of luxury only renders the contraft of indigence the more fhocking. Every thing he fees or hears, reminds him he is in the country of flavery and tyranny. Nothing is talked of but inteftine troubles, the public mifery, pecuniary extortions, baftinadoes and murders. There is no fecurity for life or property. The blood of men is fhed like that of the vileft animals. Juftice herfelf puts to death without formality. The officer of the night in his rounds, and the officer of the day in his circuit, judge, condemn, and execute in the twinkling of an eye, without appeal. Executioners attend them, and, on the firft fignal, the head of the unhappy victim falls into the leathern bag, in which
EGYPT AND SYRIA.
which it is received for fear of foiling the place. Were even the appearance of criminality neceffary to expofe to the danger of punifhment, this would be more tolerable; but frequently, without any other reafon than the avidity of a powerful chicf, or the information of an enemy, a man is fummoned before fome Bey, on fufpicion of having money. A fum is demanded from him, and if he denies that he poffeffes it, he is thrown on his back, and receives two or three hundred blows on the foles of his feet, nay, fometimes is put to death. Unfortunate is he who is fufpected of being in eafy circumftances! A hundred fpies are every moment ready to accufe him; and it is only by affuming the appearance of poverty, that he can hope to efcape the rapacioufnefs of power.
S Е с

The mijery and famine of late years.
During the laft three years, the capital of Egypt, and all the country, has prefonted a fpectacle
fpectacle of the mon deplorable mifery. To the conftant evils of an uncontrouled tyranny, and the confequences of the troubles of the preceding years, were added natural calamities ftill more defructive. The plague, brought from Confantinople in the month of November, $17^{8} 3$, made its accuftomed ravages during the whole winter. Not lefs than fifteen hundred dead bodies were reckoned to be carried out of the gates of Cairo in a day (c). The fummer, as is ufual, aflwaged its fury; but to this fcourge another equally terrible, foon fucceeded. The inundation of 1783 was not fufficient, great part of the lands therefore could not be fown for want of being watered, and another part was in the fame predicament for want of feed. In 1784 , the Nile again did not rife to the favourable height, and the dearth immediately became exceflive. Soon after the end of November, the famine carried off, at Cairo, nearly as
(c) In Turkey, the tombs, according to the cuftom of the ancients, are always without the towns; and as each tomb has ufually a large fone, and fome mafonry, they conflituie what may almoft be called a fecond town, which may be named, as formerly at Alexandria, Lecropolis, or the city of the dead.
many as the plague; the ftreets, which before were full of beggars, now afforded not a fingle one: all had perifhed, or deferted the city. Nor were its ravages lefs dreadful in the villages; an infinite number of wretches, who attempted to efcape death, were fcattered over the adjacent countries. I faw Syria full of them. In January 1785 , the ftreets of Saide and Acre, and every town in Paleftine, were crowded with Egyptians, eafily diftinguifhable by their tawny fkin; and fome of them had wandered even as far as Aleppo and the Diarbekar. The depopulation of thefe two years cannot be precifely eftimated, as the Turks keep no regifters of births, deaths, or the number of the people ( $a$ ); but it was the received opinion, that the country had loft one-fixth part of its inhabitants.

In thefe circumftances were renewed all thofe dreadful fcenes at the bare relation of which human nature fhudders, and the fight of which impreffes a melancholy horror never to be effaced. For, as was the cafe, during the famine, fome years ago in Bengal, the
(a) They have fuperffitious prejudices againft this practice.

Vol. 1.
0
Arcets
flreets and public places fwarmed with meagre and dying fkeletons; whofe faultering voices implored, in vain, the pity of paffengers, the common danger having hardened every heart. Thefe wretches expired, leaning againtt the houfes of the Beys, which they knew were ftored with rice and corn, and, not unfrequently, the Mamlouks, importuned by their cries, chafed them away with blows. Every difgufting ineans of appeafing the rage of hunger was tried, every thing the moft filthy devoured; nor, fhall I ever forget that, when I was returning from Syria to France, in March 1785 , I faw, under the walls of ancient Alexandria, two wretches fitting on the dead carcafe of a camel, and difputing its putrid fragments with the dogs.

We have among us, minds of noble and exalted fentiments, who, after paying the tribute of compaffion due to fuch difmal calamitics, find their indignation return, and imputc it as a crime to the men who will fubmit to fuffer them. They deem thofe welldefcrving death, who have not the courage to defend themelves from it, or feek, at leaf, the confolation of exemplary vengeance. They even go fo far as to adduce theie facts
in proof of a moral paradox, perhaps ramly advanced, and endeavour to demonftrate from them the pretended axion-" that the inha" bitants of hot countries, debaled by climate "* and temperament, are deftined, by nature, " to be the flaves of defpotifin."

But have they maturely examined whether fimilar facts have never happened in climates they are pleafed to honour with the exclufive privilege of liberty? Have they accurately obferved whether the general facts on which they build be not accompanied with circumftances and acceffaries which make an effential difference in the confequences? In politics, as in medicine, detached, phænomena continually lead us into error refpecting the real caufes of the malady. Men are too anxious to erect particular cafes into general rules; and yet thofe univerfal principles, which are fo flattering to the mind, have almoft invariably the defect of being vague. So rarely are the facts on which we reafon exact, and fo liable to miftake is the mort careful obferver, that we ought to be extremely cautious, or we hidl be continually raifing fyftems on imaginary foundations.

In the cafe of which we are treating, if we attentively examine the caufes of the debafement of the Egyptians, we hall find that this people, depreffed by cruel circumftances, are more deferving of pity than contempt, for the political fituation of this country is very unlike that of Europe. Among us, the traces of ancient revolutions are becoming fainter every day; the foreign conquerors have affimilated with the conquered natives; and from this mixture has been formed one national body, all the members of which have the fame intereft. In Egypt, on the contrary, and throughout almoft all Afia, the original inhabitants, enflaved by revolutions, the effiects of which are ftill apparent, are become a prey to foreign conquerors, who, mixing with the natives, have formed diftinct parties, whofe interefts are directly oppofite. The fate is properly divided into two factions; npe, that of the conquering nation, who are in poffeffion of all the civil and military employments; and the other, that of the vanquifhed, who confitute the fubaltern clafles of fociety. The ruling party afluming, by right of conqueft, an exclufive
clufive title to all property, treat the governed faction as merely the paffive inftument of their pleafures, while the latter, in their turn, deflitute of all perfonal intereft, contribute as little as poffible to the fervice of the other. Their ftate is that of a flave, to whom the opulence of his mafter is a burthen, and who would willingly free himfelf from his fervitude, were it in his power.

This feeblenefs is another characteriftic which diftinguifhes the conftitution of thefe nations from thofe of Europe. In the European ftates, the governments, deriving from each refpective nation the means of governing it, find it neither an eafy matter, nor their intereft to abufe their power. And even fuppofing they formed diftinct interefts, they would fill be unable to obtain unlimited powers. The reafon is, that befides the multitude called people, which, though powerful from its number, is always feeble from its difunion, there exifts a middle order, which, partaking of the qualities of the governors and the governed, maintains, in fome meafure, an equilibrium between the one and the other. This is the clafs of the opulent and independent citizens, who, dif-

O 3
perfed
perfed through the different occupations of fociety, have a common intereft in feeing thofe rights of property and fecurity which they enjoy refpected. In Egypt, on the contrary, there is no middle ftate; none of our numerous claffes of nobility; no clergy, merchants, or landholders, which, in fome degree, conftitute an intermediate body between the common people and the government. There, every man is a foldier, or profeffor of the law, that is to fay, a creature of government; or he is a labourcr, an artizan, or fhopkeeper, that is to fay, one of the people, and the people above all are deficient in the firft requifite to combat opprefion, the art of combining and directing their force. To deftroy or to reform the Mamlouks, a general league of the peafantry is neceffary; and this it is impoffible to form. The fyftem of oppreflion is methodical. One would imagine thefe tyrants were every where encued with an intuitive knowledge of its principles. Each province, each diftrict, has its governor, and each village its lieutenant (b), who
(b) In Arabic kaiem maknin, literally locum teners, from which is formed caimacan, lieutenant.
watches the motions of the multitude. Single againft fuch numbers, he may appear feeble; but the power he reprefents renders him formidable. Befides, experience proves that wherever a man has the courage to make himfelf matter he finds enough whofe meannefs will fecond his pretenfions. This lieutenant transfers a portion of his authority to fome individuals of the fociety he opprefles, and thefe become his fupporters: jealous of each other, they ftrive who fha! beft merit his favour, and he employs them alternately to effect their mutual deftruction.

The fame jealoufies and inveterate hatreds pervade allo and difunite the villages. But even fuppofing an union which is fo difficult to take place, what could a crowd of bare-footed and almoft naked peafants, with only fticks, or even with mufkets, effect againft a body of difciplined and well-armed cavalry. I am, above all, led to believe Egypt can never fhake off this yoke, when I confider the nature of the country, which is but too advantageous for cavalry. If the beft regulated infantry among us dread to en-
counter the horfe in a plain, how formidable muft they be to a people who are wholly ignorant of the very firf elements of tactics, and who can never poffibly acquire a knowledge which can only be the refult of an cxperience their fituation denies them. Moun-

- tainous countries, alone, afford to liberty its great refources. It is there that fkill and addrefs, favoured by fituation, fupply the deficiency of numbers. The revolters, unanimous, becaufe they are at firit not numerous, acquire every day new ftrength, from the habit of exercifing it, while the oppreffor, lefs active, becaufe he is already powerful, delays his attack, till at length there bands of peafants, or plunderers, whom he defpifed, become foldiers intered to war, and difpute with him, even in the plains, the fuperiority in military fkill, and the paim of victory. In flat countries, on the contrary, the firft tumult is fuppreffed, and the ignorant peafant, who does not even know how to throw up an entrenchment, has no other refource but in the clemency of his mafter, and a quiet fubmiffion to his navery. We fall therefore find, that no general principle
ciple can be advanced more true than the following: That plains are the babitation of indolence and of Mavery, and mountains the country of energy and freedom (c).

In the prefent fituation of the Egyptians, it is poffible they might not difplay much courage; and yet it may not be true that the feeds of it are wanting in them, or that it is denied them by the climate. For that continued effort of the mind, called courage, is a quality more nearly allied to our moral, than our phyfical conftitution. It is not the greater or lefs degree of heat in the climate,
(c) In fact, the ancient and modern rations in general, who have difplayed the greateft activity, were mountaineers. The Affyrians, who extended their conquefts from the Indus to the Mediterranean, came from the mountains of Atouria. The Chaldeans were originally from, the fame countries; the Perfians, who conquered under Cyrus, defcended from the mountains of the Elymais, and the Macedonians from Mount Rhodope. In modern times, the Swifs, the Scots, the Savoyards, the Miquelets, the Afturians, the inhabitants of the Cevennes, always free, or difficult to fubject, would feem to prove this a general rule, did not the exception of the Arabs and the Tartars indicate fome other moral caire, common to the plains as well as to the mountains.
but rather the energy of the paffions, and the confidence we have in our own powers, which enables us to brave danger. Where thefe two requifites do not exift, courage may remain inert; though circumftances alone are wanting to call it into action. Befides, if any men are capable of this energy, it hould be thofe whofe minds and bodies, inured to fuffering by habit, have acquired a hardinefs which blunts the edge of pain, and fuch are the Egyptians. We deceive ourfelves when we reprefent them as enervated by heat, or effeminate from debauchery. The inhabitants of the cities, and men of opulence, may indeed be a prey to that effeminacy which is common to them in every climate; but the poor defpifed peafants, denominated fcllabs, fupport aftonifhing fatigucs. I have feen them pals whole days in drawing water from the Nile, expofed naked to a fun which would kill us. Thofe who are valets to the Mamlouks, continually follow their mafters. In town, or in the country, and amid all the dangers of war, they accompany them every where, and always on foot; they will run before or after their horfes for days together, and when they
are fatigued, tie themfelves to their tails rather than be left behind.

The character of their minds is every way correfpondent to the hardinefs of their bodies. The implacability difplayed by thefe peafants in their hatreds, and their revenges ( $d$ ); their obftinacy in the battles which frequently happen between different villages; their fenfe of honour in fuffering the baftinado, without difcovering a fecret, (e) and even the barbarity with which they punifh the flighteft deviation from chaftity in their wives and daughters $(f)$, all prove that their minds, when fwayed by certain
(d) When a man is flain by another, the family of the deceafed demand a retaliation from the family of the affifin, and this vengeance is purfued from generation to generation, without ever being forgotten.
(e) When a perfon has undergone the torture, without difcovering his wealth, he is faid to be a man, and this eulogiun indemuifies him for his fuffering.
(f) They frequently put them to death on mere furpicion; and this is equally true in Syria. When I was at Ramla, a peafant came into the market for feveral days, with his cloak ftained with the blood of his daughter, whom he had thus killed: the action indeed was generally approved. Turkifh juftice never meddles with thefe affairs.

preju-

prejudices, are capable of great energy, and that that energy only wants a proper direction, to become a formidable courage. The cruelties and feditions which have fometimes been the confequence of their exhaufted patience, efpecially in the province of Sharkia, indicate a latent fire, which waits only for proper agents to put it in motion, and produce great and unexpected effects.
S e c t. III.

State of the arts.
But a powerful obfacle to every fortunate revolution in Egypt, is the profound ignorance of the nation, which equally prevents them from perceiving the caufes of their evils, or applying the neceffary remedies.

As I propore treating this article, which, like feveral of the preceding ones, is com-* mon to all the Turkith empire, more fully in another place, I fhall not at prefent dwell on particulars. It will be fufficient to obferve, that this ignorance, diffuled through every clafs, extends its effiects to every fpecies of
moral and phyfical knowledge, to the fciences, and the fine arts, and even to the mechanical profeffions. The moft fimple of thefe are fill in a ftate of infancy. The work of their cabinet-makers, lockfmiths, and gunfmiths, is extremely clumfy. Their mercery, their hardware, their gun and piftol barrels, are all imported from foreign countries. With difficulty can you find one watchmaker at Cairo who knows how to repair a watch, and he too is an European. Jewellers are more common there than at Smyrna and Aleppo; but they know not how to mount properly the fimpleft rofe. Gunpowder is made there, but it is coarfe. Sugar is refined there, but it is full of melaffes, and the white is exceffively dear. The only manufacture in any degree of perfection is their filk ftuffs; and the workmanfhip of them is much lefs highly finif:od, and the price far greater than in Europe.

## C H A P. XIII. <br> State of Cominerce.

IN this ftate of univerfal barbarifm, it can. not but appear aftonifhing that commerce fhould fill continue fo flourifhing as we find it at Cairo; but an attentive enquiry into the fources from whence it is derived will explain the reafon.

Two powerful caufes have contributed to render Cairo the feat of an extenfive commerce; the firft of which is, that all the commodities confumed in Egypt are collected within the walls of that city; and all the perfons of property, that is, the Mamlouks and lawyers, are afiembled there, and draw thither their whole revenues, without making any return to the country from which they receive them.

The fecond is the fituation, which makes this city a centre of circulation, while by the Red Sen, it correfponds with Arabia and India; by the Nile, with Abyflinia and the interior parts of Africa; and by the Mediterranean, with Europe and the empire of Turkey.

Turkéy. Every year a caravan from Abyffinia arrives at Cairo, and brings from a thoufand to twelve hundred black flaves, as alfo elephants teeth, gold duft, oftrichfeathers, gums, parrots and monkeys ( $g$ ), while another, deftined for Mecca, leaves the extremities of Morocco, and receiving pilgrims even from the river of Senegal (b), coafts along the Mediterranean, collecting thofe of Algiers, Tripoli, and Tunis, and arrives by the defert at Alexandria, confifting of not lefs than three or four thoufand camels. From thence it proceeds to Cairo, where it joins the caravan of Egypt. They then jointly fet out for Mecca, whence they return one hundred days after. But the pilgrims of Morocco, who have fix hundred leagues more to travel, do not reach home
(g) This caravan comes by land along the Nile; it was with that Mr. Bruce returned in $\mathbf{1 7 7 2}$, from Abyifinia, after having performed the moft adventurous journey attempted in the prefent age. In traverfing the defert, the provifions of the caravan fell fhort, and the travellers lived feveral days on gum alone.
(b) I faw feveral negroes who came by this caravan, from the country of the Foulis, to the north of Senegal, and who faid they had feen Europeans in their country.
till after an abfence of more than a year. The lading of thefe caravans confifts in India ftuffs, fhawls, gums, pearls, perfumes, and efpecially the coffee of Yemen.

The fame commodities arrive by another route at Suez, to which port the foutherly winds bring, in May, fix or eight and twenty fail of veffels from Djedda. Cairo does not retain the whole quantity of this merchandize; but, befides what is there confunied, conflderable profits arife from the duties, and the fums expended by the pilgrims. On the other hand, fmall caravans arrive from time to time from Damafcus, with filk and cotton fuffs, oils, and dried fruits. During the favourable feafon, there are always fome veffels in the road of Damietta, unloading hogheads of tobacco from Latakia, the confumption of which in Egypt is enormous. Thefe veffels take rice in exchange, whilf others arrive fucceffively at Alexandria, bringing clothing, arms, furs, paffengers, and wruught filk, from Conftantinople. Veffels come likewife from Marfeilles, Leghorn and Venice, with cloths, cochineal, Lyons ftuffs, and laces, grocery, paper, iron, lead, Venesian fequins, and German dahlers. All thele
articles conveyed by fea to Rofetta in barks called djerm ( $i$ ), are firf landed there, then re-imbarked on the Nile, and fent to Cairo. From this account, it is not furprizing that commerce fhould continue fo flourifhing in that capital, and we need not hefitate to admit the report of the commiffioner general of the cuftoms, who afferted, that in 1783 , Cairo had traded to the amount of near a hundred and fifty millions of livres, (fix millions two hundred and fifty thoufand pounds.) But if we examine the channels into which this wealth is poured, if we confider that a great part of the merchandize and coffee of India paffes into foreign countries, the value of which is paid in goods from Europe and Turkey; that the confumption of the country almof entirely confifts of articles of luxury completely finihed, and that the produce given in return is principally in raw materials, we thall perceive that all this commerce is carried on without contributing greatly to the real riches of Egypt, or the benefit of the people.
(i) A fort of boat which carries an extremely large lateen fail, ftriped with blue and brown, like ticking.

## C H A P. XIV.

Of the Ifthmus of Suez, and the junction of the Red Sea with the Mediterranean.

I
HAVE mentioned the commerce carried on at Cairo, with Arabia and India, by the way of Suez; and this fubject naturally leads to a queftion frequently agitated in Europe; which is, whether it would be practicable to cut through the Ifthmus which feparates the Red Sed from the Mediterranean, that veffels might arrive at India by a fhorter toute than by the Cape of Good Hope. The narrownefs of the Ifthmus induces us to believe it eafily practicable; but, in a journey I made to Suez, the following reafons induced me to change my opinion.

Firft, It is certainly true, that the fpace which feparates the two feas is not more than eighteen or nineteen ordinary leagues; it is true, alfo, that this interval is not interfected by mountains, and that, from the tops of the terraces at Suez, we cannot difcover, with
with zriy telefcopes, a fingle obftacle on the naked and barren plain to the north-weft ; it is not therefore the difference of levels which prevents the junction (a); but, the great difficulty arifes from the nature of the correfponding coafts of the Mediterranean and the Red Sea, which are of a low and fandy foil, where the waters form lakes, fhoals, and moraffes, fo that veffels cannot approach within a confiderable diftance. It will therefore be found farcely poffible to dig a permanent canal amid thefe fhifting fands : not to mention that the fhore is deftitute of harbours, which muft be entirely the work of art. The country befides has not a drop of frefh water, and to fupply the inhabitants, it muft be brought as far as from the Nile.

The beft and only method therefore of effecting this junction, is that which has been
(a) The ancients were of opinion that the Red Sea was higher than the Mediterranean; and, in fact, if we obferve that, from the canal of Kolzoum to the fea, the Nile has a declivity, for the fpace of thirty leagues, this idea will not appear fo ridiculous; befides that, to me, it appears probable the level will be found at the Cave of Good Hope.
already fuccesffuliy practifed at diferent times; which is, by making the river itfelf the medium of communication, for which the ground is perfectly well calculated; for Mount Mokattam fuddenly terminating in the latitude of Cairo, forms only a low and femicircular mound, round which is a continued plain from the banks of the Nile, as far as the point of the Red Sea. The ancients, who early underftood the advantage to be derived from this fituation, adopted the idea of joining the two feas by a canal connected with the river. Strabo (lib. 17.) obferves, that this firft was executed under Sefoftris, who reigned about the time of the Trojan war (b); and this work was fo confiderable as to occafon it to be remarked; "that it was a hun"dred cubits, (or a hundred and feventy feet) "wide and deep enough for large veffels." After the Greeks conquered the country, it was reftored by the Ptolemies, and again renewed by Trajan. In fhort, even the Arabs them-
(b) That is, according to certain calculations of mine, in the time of Solomon. See Mémoire fur la Cbromologie Ancienne, inferted in the fournat des Scavans, of January 1782.
felves followed thefe examples. "In the time s" of Omar ebn-el-Kattab," fays the hiftorian El Makin, " the cities of Mecca and Medina " fuffering from famine, the Calif ordered "Amrou, Governor of Egypt, to cut a canal " from the Nile to Kolzoum, that the con" tributions of corn and barley, appointed "f for Arabia, might be conveyed that way." This canal is the fame which runs at prefent to Cairo, and lofes itfelf in the country to the north-eaft of Berket-el-Hadj, or the Lake of the Pilgrims. Kolzcum, the Clyfma of the Greeks, where it terminated, has been deftroyed for many ages; but the name and fituation ftill fubfift in a hillock of fand, bricks, and ftones, three hundred paces to the north of Suez, on the border of the fea, oppofite the ford which leads to the fpring of El-Naba. I have been on the fpot as well as M. Niebuhr, and the Arabs told me, as they did him, it was called Kolzoum; Danville therefore is deceived, when, copying an error of Ptolemy's, he places Clyfma eight leagues to the fouthward. I am of opinion that he is likewife miftaken, in fuppofing Suez the Arfinoe of the ancients.

This ciey having been fituated, according to the Greeks and Arabs, to the north of Clyrma , we fhould endeavour to trace it according to the words of Strabo (c), "quite at or the bottom of the gulph, as we approach "Egypt," without proceeding however with M. Savary as far as Adjeroud, which is too far to the weftward. We ought to confine ourfelves to the low country, which extends about two leagues from the bottom of the prefent gulph, that fpace being all we can reafonably allow for the retreat of the fea in feventeen centuries.

Formerly thefe diftricts were covered with towns which have difappeared with the waters of the Nile; the canals which conveyed thefe are deftroyed, for in this dhifting foil they are rapidly choaked up, both by the action of the winds, and by the cavalry of the Bedouin Arabs. At prefent the commerce of Cairo with Suez is only carried on by means of caravans, which wait the arrival, and fet out on the departure of the veficls, that is, towards the end of April,

> (c) Strabo, lib. IFo
or the beginning of May, and in the courfe of the months of July and Auguft. That which I accompanied in 1783 , confifted of about three thoufand camels, and five or fix thoufand men (d). The merchandize confifted in wood, fails, and cordage for the fhips at Suez; in fome anchors, carried each of them by four camels, iron bars, carded wool, and lead; it likewife carried bales of cloth, and barrels of cochineal, corn, barley, and beans, Turkifh piaftres, Venetian fequins, and Imperial dahlers. All there commodities were deftined for Djedda, Mecca, and Moka, where they were to be bartered for Indian goods, and the coffee of Arabia, which forms the principal article of the returns. There was befides a great number of pilgrims, who preferred the voyage by fea to a land journey; and it alfo carried
(d) It remained upwards of forty days affembled, deferring its departure for various reafons; among others, on account of the unlucky days, in which refpect the Turks are as fuperfitious as the Romans formerly were. At length it fet out on the $27^{\text {th }}$ of July, and arrived the 29 th at Suez, having journeyed twenty-nine hours by the route of the Haouatat Arabs, a league farther to the fouth than the Lake of the Pilgrims;
the neceffary provifions, fuch as rice, meat, wood, and even water; for no place in the world is more deftitute of every neceffary than Suez. From the tops of the terraces, the eye, furveying the fandy plain to the north-weft, the white rocks of Arabia to the eait, or the fea; and the mountain Mokattam, to the fouth, cannot difcern even a fingle tree, or the fmalleft fpot of verdure. Suez prefents no profpect but extenfive yellow fands, or a lake of green water; the ruinous condition of the houfes heightens this melancholy fcenery. The only water which can be drunk is brought from El-Naba, or the $\int$ pring, fituated at the diftance of three hours journey on the Arabian Chore; but it is fo brackifh, that without a mixture of tum, it is infupportable to Europeans. The fea might furnifh a quantity of thell and other filh; but the Arabs. feldom attempt fifhing, at which they are far from expert; when the vefiels are gone, therefore, nobody remains at Suez, but the governor, who is a Mamlouk, and twelve or fourteen pierfons, who form his houfchold, and the garrifon.

The fortrefs is a defencelefs heap of ruins, which
which the Arabs confider as a citadel, becaufe it contains fix brafs four pounders, and two Greek gunners, who turn their heads afide when they fire. The harbour is a wretched quay, where the fmalleft boats are unable to reach the fhore, except at the higheft tides. There, however, the merchandize is embarked, to convey it over the banks of fand, to the veffels which anchor in the road. This road, fituated a league from the town, is feparated from it by a. fhore which is left dry at low water; it has no works for its defence, fo that the veffels which I have feen there, to the number of eight-and-twenty at a time, might be attacked without oppofition; for the hips themfelves are incapable of refiftance, none having any other artillery than four rufty fwivels. Their number diminifhes every year, fince, by continually coafting along a fhore full of thoals, one out of nine, at leaft, is hipwrecked. In 1783, one of them having anchored at El-Tor, to take in water, was furprifed by the Arabs, while the crew were fleeping on fhore. After plundering it of fifteen hundred bags of coffee, they abandoned the veffel to the wind, which threw

218 TRAVELS IN
it upon the coaft. The dock at Suez is ill adapted to repair fuch damages; fcarcely do they build a cayafe in three years. Befides that the lea, which, from its flux and reflux, accumulares the fand upon that coaft, will at laft choak up the entrance, and the fame change will take place at Suez, which has already at Kolzoum and Arfinoe.

Were Egypt under the adminiftration of a wife government, advantage might be then taken of that accident to build another town in the fame road, which might be done on a: caufewaty of only feven or eight feet in hieight, as the tide ufually rifes no more than three feet and a half. The canal of the Nile vould be cleanfed and repaired, and the five hundred thoufand livres (near twenty-one thoufand pounds), paid annually to the efcort of the Arabs of Haothatat and Ayaidi entirely faved. In hort, to avoid the very dangerous bar of the Bogaz of Rofetta, the eanal of Alexandria would be rendered navigable, from whence the merchandize might be conveyed immediately to the Porte. But fuch are not the cares of the prefent government. The fmali degree of encouragement it grants to commerce is not even founded on rational
motives ; if it be tolerated, it is merely becaufe it furnifhes a means of gratifying rapacity, and is a fource from whence tyranny perpetually derives profit, without confidering haw foon it may be exhaufted. It does not even know how to make advantage of the eagernefs of the Europeans to communicate with India. In vain have the Englim and French attempted to concert with the Turks a plan for opening fuch a paffage; they either infiexibly refufe, or difcourage every application. We fhould be wrong in flattering ourfelves with any durable fuccefs; for even were treaties concluded, the revolutions which, between evening and morning, fo often alter the face of affairs at Cairo, would render them of no effect, as was the cafe with the treaty concluded in 1775, between Mohammad Bey and the Governor of Bengal. Such befides is the avarice and treachery of the Mamlouks, that they would never want pretexts to harals the merchants, and would augment, in fpite of every engagement, the duties on commodities.

Thofe on coffee are at this moment enormous. The farde, or bale of this commodity, weighing
weighing from three hundred and feventy to three hundred and feventy-five pounds, and cofting, at Moka, forty-five pataques (e), or two hundred and thirty-fix livres Tournois, (nine pounds fixteen and eightpence), pays in babr, or fea duties, one hundred and fortyfeven livres (fix pounds two fhillings and fix-pence), befides an addition of fixty-nine livres (two pounds feventeen fhillings and fixpence) laid on in $1783(f)$. So that on adding the fix per cent. collected at Djedda,
we
(e) This is the name given by the inhabitants of Provence to the dahler of the empire, after the Arabs, who call it Rial aboutaka, or Father of the window, on account of the arms on the reverfe, which, according to them, refemble a window. The dahler is worth five livres five fols (four and four pence half-penny.)
(f) In May 1783, the fleet of Djedda, confifting of twenty-eight fail, four of which were veffels pierced for fixty guns, brought near thirty thoufand fardes of coffce, which, at the rate of 370 pounds the farde, form a total of elcven millions one hundred thoufand pounds weight, or one hundred and one thoufand quintals; but it muft be obferved, that the demand of that year was more than a third greater than ufual. Accordingly, we muft only reckon, on an average, from fixty to feventy thoufand quintals annually. The farde, paying two hundred
we fhall find that the duties nearly equal the prime coft ( $g$ ).
hundred and fixteen livres (nine pounds), duty at Suez, the thirty thoufand fardes of 1783 produced to the Cuftom-houfe fix millions four hundred and eighty thoufand livres Tournois (two hundred and feventy thoufand pounds.)

adding to which the freight, loffes, and wafte, it is not aftonifhing that the Moka coffee fhould fell at five-and-forty, and fifty fols (one and ten-pence, and two and a penny), the pound in Egypt, and for three livres, (half a crown) at Marfeilles.

## C H A P. XV.

## Of the cufomboufes and impofts.

THE adminiftration of the cuftoms forms, in Egypt, as in all Turkey, one of the principal offices of government. He who exercifes it is at once the comptroller and farmergeneral. All the duties on entry, exports, and the circulation of commodities, depend on him. He names all the fubalterns who collect them. To this he adds the paltes, or exclufive privileges of the natron of Terane, the kali of Alexandria, the caffia of the Thebais, the fenna of Nubia, and, in a word, is the defpot of commerce, which he regulates at his pleafure. His office is never held for longer than a year. The price of his contract in $I_{7} 8_{3}$, was one thoufand purfes, which, at the rate of five hundred piafters the purfe, and fifty fols the piafter, make twelve hundred and fifty thoufand livres, (above fifty-two thoufand pounds.) It is true we mult include among the conditions of his farm cientual extortions, or calual demands;
demands ; that is, when Mourad Bey, or Ibrahim, are in want of five hundred thoufand livres, they fend for the commiffioner of the cuftoms, who cannot difpenfe with advancing them that fum; but he receives a warrant in return, which empowers him to levy this extortion on commerce, for which he taxes, in a friendly way, the different corps or nations, fuch as the Franks, the Barbary Arabs, and the Turks; and this frequently turns out not a little to his advantage. In fome provinces of Turkey, he has alfo the collecting of the miri, or tax levied only on the lands. But in Egypt, this adminiftration is entrufted with the Copt writers, who exercife it under the direction of the fecretary of the commandant. Thefe writers have regifters of each village, and are employed in receiving the payments, and accounting for them to the treafury; they frequently profit by the ignorance of the peafants, in not carrying to account the partial payments, and by obliging them to difcharge the debt a fecond time: they often fell the oxen, the buffaloes, and even the mat on which thefe wretches lie; and it may be truly faid, that they are agents every way worthy
worthy of their mafters. The ordinary tax hould amount to thirty-three piafters for each feddan; that is to fay, to near eightythree livres (three pounds nine and twopence) for every yoke of oxen; but this is fometimes carried, by abufe, as far as two hundred livres, (four pounds fix and fixpence.) It is calculated that the whole produce of the miri, collected as well in money as in corn, barley, beans, rice, \&cc. may amount to from forty-fix to fifty millions of France, (about two millions fterling) when bread fells at one fadda the rotle, that is, at five liards (fomething more than a half-penny) the pound of fourteen ounces.

But to return to the cuftom-houfes; they were managed formerly, according to ancient cultom, by the Jews; but Ali Bey having completely ruined them in 1769 , by an enormous extortion, they paffed into the hands of the Chriftians of Syria, with whom they ftill remain. Thefe Chriftians, who came from Damafcus to Cairo, about fifty years ago, confifted at firft of but about two or three families; their profits attracted others, and their number is now multiplied to near five hundred. Their original modefty and œco-

$$

$$

nomy enabled them to gain poffeffion, firft of one branch of commerce, and then of another, fo that at length they were able to take the farm of the cuftom-houre after the ruin of the Jews. From that time they have acquired great opulence, and made pretenfions which may poflibly end by a fate fimilar to that of their predeceffors. Their hour was thought to be come when their chief, Anthony Faraoun, fled from Egypt in 1784 , and went to Leghorn, to enjoy in fafety a fortune of feveral millions; but this event, as it was without example (a), fo it had no confequences.
S E C T. I.

Of the commerce of the Franks at Cairo.

Next to thefe Chriftians of Syria, the moft confiderable body of merchants is that of the Europeans, known in the Levant under the name of Franks. From a very early period
(a) In general the orientals hold the manners of Europe in deteftation, which prevents cvery idéa of cmigration.

Vol. I.
Q
the
the Venetians have had eftablifhments at Cairo, to which they fend fadlery, filk ftuffs, looking-glaffes, mercery, \&c. The Englifh alfo partook of this trade, and fent cloths, arms; and hardware, which have to this day preferved their fuperiority of reputation. But the French, by furnihing fimilar articles at a much cheaper rate, have obtained the preference, to the exclufion of their rivals. The pillage of the caravan which attempted to pals from Suez to Cairo, in 1779 (b), has
given
(b) The newfpapers of the day fpoke much of this pillage, on account of M. de St. Germain, of the Ine of Bourbon, whofe misfortunes were greatly talked of in France. The caravan was compored of Englifh officers and paffengers, who had landed from two veffels at Sucz, in their way to Europe, by Cairo. The Bedouin Arabs of Tor, informed that thele paffengers were richly laden, refolved to plunder them, and attacked them five leagues from Suez. The Europeans, ftripped ftark naked, and difperfed by fear, Teparated into two parties. Some of them returned to Sucz; the remainder, to the number of feven, thinking they could reach Cairo, puthed forward into the Defert. liatigue, thirft, hunger, and the heat of the fun, deffroved the mone after the other. M. de Saint Germain alone furvived all thefe horrors. During three days and two nights, he wandered in this bare and fandy defent, frozell at night by the north wind, (it was
given the laft blow to the Englifh; and fince that period there has not appeared in either of
in the month of January) and burnt by the fun during the day, without aniy other fhade but a fingle bufh, into which he thruft his head among the thorns, or any drink but his own urine. At length, on the third day, perceiving the water of Berket-cl-Hadj, he ftrove to make towards it; but he had already fallen three times from weaknefs, and undoubtedly would have remained where he laft fell, but for a peafint, mounted on a caunel, who faw him at a great diftance: This charitable man conveyed him to his dwelling, and took care of him for three days with the utmoft humanity. At the expiration of that time, the merchants of Cairo, apprized of his misfortune, proclred him a conveyance to that city, where he arrived in the moft deplorable condition. His body was one entire wound, his breath cadaverous, and he had fcarcely a fpark of life remaining. By dint of great cate and attention, however, Mr. Charles Magallon, who received him in his houfe, had the fatisfaction of faving him, and even of re-eftablifhing his health. Much was faid at the time of the barbarity of the Arabs, who notwithfanding killed no one: at prefent we may venture to blame the imprudence of the Europeans, who conducted themfelves throughout the whole affair like madmen. So great was the difcord annong them, and they had carried their negligence fo far, as not to have a fingle piftol fit for ufe. All their arms were at the bottom of their chcfts. Befides, it appears that the Arahs did not act merely from their ufual motives; well in-
of theí towns a fingle factor of that nation.

The principal articles of the French trade in Egypt confift, as throughout the Levant, in light cloths of Languedoc, called firft Londrins, and fecond Londrins. They fell annually, upon an average, between nine hundred and a thoufand bales. The profit is from thirty-five to forty per cent, but their drawing and re-drawing caufing a lofs of from twenty to twenty-five, the net produce is only fifteen per cent. The cther articles of importation are iron, lead, groceries, cochineal, fome laces, and Lyons fuffs, various articles of mercery, and dahlers and fequins.

In exchange they take coffee of Arabia, African gums, clumfy cottons, manufactured at Manouf, and which are re-hipped to the French Went-Indies, untanned hides,
formed perfons affert that the affair was concerted at Conftantinople, by the Engriigh Eofl-India Company's agents, who faw, with a jcalncis cye, individuals entering into competition with them for the traffic of Bengal; and what has paffed in the courfe of the enquiries into this crent, has proved the truth of the affertion.
fafranum, fal ammoniac, and rice ( $c$ ). Theie articles rarely balance the exports, and the merchant is at a lofs for his returns, not however from a want of a variety of prodictions, as Egypt furnifhes corn, rice, doura, millet, fefamum, cotton, flax, fenna, caffia, fugarcanes, nitre, natrum, fal ammoniac, honey, and wax ; filks alfo and wine might be produced: but induftry and exertion are wanting, becaufe the cultivator would not be permitted to enjoy the fruits of his labour.

The importation of the French is eftimated, communibus annis, at three millions of livres (a hundred and twenty-five thouland pounds). France maintained a Conful at Cairo till 1777, when he was withdrawn on account of the expence. He was transferred to Alexandria, and the merchants, who fuffered him to go without demanding an indemnity, remained at Cairo at the peril of their lives and fortunes. Their fituation, which has not changed, is nearly fimilar to that of the
(c) The exportation of corn is prohibited, and Pococke remarked in 1537, that this meafure had been detrimental to agriculture.

Dutch at Nangazaki; that is to fay, fhut up in a confined place, they live among themfelves, with fearcely any external communication; they even dread it, and go as little out as poffible, to avoid the infuits of the common people, who hate the very name of the Franks, and the infolence of the Mamlouks, who force them to difmount from their affes in the middle of the ftreets. In this kind of habitual imprifonment, they tremble every inftant, left the plague fould oblige them entirely to fhut themfelves up in their houfes, or fome revolt expofe their quarter to be plundered; left the chief of fome party fhould make a pecuniary demand (d) or the Beys compel them to furnifh them with what they want, which is always attended with no little danger.

Nor do their mercantile affairs caufe them lefs uneafinefs. Obliged to fell on credit, they are rarely paid at the Ripulated time. There are no regulations even for bills of exchange, no recourfe can be had to juftice,
(d) They have obfcrved, that thefe extortions amount, annuaily, on an average, to fixty-three thoufand livres (two thoufand fix hundred and twenty-five pounds.)
becaufe
becaufe jufice there is always worfe than bankruptcy. Every thing depends on confcience, and that confcience has been fenfibly lofing its influence for fome time paft. Payments are delayed for whole years; frequently they receive no payment at all, and great deductions are almoft always made. The Chriftians, who are their principal correfpondents, are, in this refpect, more faithlefs even than the Turks; and it is remarkable that, throughout the empire, the character of the Chriftians is greatly inferior to that of the Muffulmen; they are reduced, however, ta the neceffity of letting every thing pafs through fuch hands. Add to this, that it is impoffible ever to realize their capital ; and to obtain an outftanding debt they are under a neceffity of giving fill greater credit. For all there reafons, Cairo is the mof: precarious and moft difagreeable factory of the Levant. Fifteen years ago, there were nine French mercantile houfes at Cairo; in 1785, they were reduced to three, and thort ly perhaps there will not remain one. The Chriftians of Syria, fettled fome time ago at Leghorn, have given another fatal blow to
this fettlement, by the imme liate correfpondence they carry on with their countrymen; and the Grand Duke of Tuicany, who treats them like his other fubjects, contributes every thing in his power toward the augmentation of their commerce.

## C H A P. XVI.

Of the city of Cairo.

GRAND Cairo, of which I have already faid fo much, is fo celebrated a city that it well deferves a ftill more particular defcription. This capital does not, in the country, bear the name of El-Kabera, given it by its founder ; the Arabs know it only by that of Mafr, which has no known fignification, but which feems to have been the ancient eaftern name of the Lower Egypt (a).

This city ftands on the eaftern bank of the Nile, at the diftance of a quarter of a league from the river, which deprives it of a great advantage; for the lofs of which the canal, which comes up to it, cannot compenfate, fince it contains no running water, except in the time of the inundation.
(a) This name of Mafr has the fame confonants with that of $M_{c} f r$-aim, ufed by the Hebrews; which, on account of its plural form, feems properly to denote the inhabitants of the Delta, while thore of the Thebais are called Beni Kuus, or children of Kous.

When we hear of Grand Cairo, we are led to imagine that it muft be a capital, at leaft, like thofe of Europe; but if we reflect that, even among ourfelves, towns have only begun to be rendered convenient and elegant within thefe hundred years, we fhall eafily believe that, in a country where nothing has been improved fince the tenth century, they muft partake of the common barbarifm; and, indeed, we fhall find that Cairo contains none of thofe public or private edifices, thofe regular fquares, or well-built fireets, in which the architect difplays his genius. Its environs are full of hills of durt, formed by the rubbint which is accumulating every day (b), while the multitude of tombs, and the ftench of the common fewers, are at once offenfive to the fmell and the fight. Within the walls, the freets are winding and narrow; and as they are not paved, the crowds of men, camels, affes, and dogs, which prefs againt each other, raife a very difagreeable duft; individuals often water their doors, and
(b) Suitan Selim had appointed boats to carry it to the fea; but this regulation has been laid afide, to divert the money to other purpofes.
to this duft fucceeds mud and peftiferous exhalations. Contrary to the general cuftom of the eaft, the houfes have two and three ftories, over which is a terrace of fone or tiles; in general they are of earth and bricks badly burnt ; the reft are of foft ftone, of a fine grain, procured from the neighbouring Mount Mokattam. All thefe houfes have the air of prifons, for they have no light from the ftreet; as it is extremely dangerous to have many windows in fuch a country: they even take the precaution to make the entering door very low. The rooms within are ill contrived. Among the great, however, are to be found a few ornaments and conveniencies, their vaft halls, efpecially, in which water fpouts up into marble bafons, are peculiarly well adapted to the climate. The paved floor, inlaid with marble and coloured earthen ware, is covered with mats and mattreffes, and over all is fpread a rich carpet, on which they fit crofs-legged. Around the wall is a fort of fofa, with cufhions, to fupport the back and elbows; and above, at the height of feven or eight feet, a range of fhelves, decked out with China and Japanefe porcelain. The walls, naked in other refpects,
are chequered with fentences extracted from the Koran, and painted foliage and flowers, with which alfo the porticos of the Beys are covered ; the windows have neither glafs, nor moving faftes, but only an open lattice work, which frequently cofts more than our glazing. The light enters from the inner courts, from whence the fycamores reflect a verdure pleafing to the cye. An opening to the north, or at the top of the cieling, admits a refiefhing breeze, while, by a whimfical contradiction, they wrap themfelves up in warm woollen cloths and furs. The rich pretend by this means to efcape difeafes; but the common people, with their blue fhirts and hard mats, are lefs liable to take cold, and enjoy betier health.
SECT. I.

## Of the population of Cairo and Esypt.

The population of Cairo has frequently been a fubject of difpute. If we may credit the head officer of the cufoms, Anthony Faraoun, cited by Baron De Tott, it approaches feven hundred thoufand fouls, including Boulak, a
port and fuburb detached from the city; but all calculations of the number of inhabitants in Turkey are arbitrary, as no regifters are kept of births, deaths, or marriages. The Mahometans have even fuperfitious prejudices againft numbering their people. The Chriftians may indeed be eftimated by means of their cickets of capitation (c). All we know with certainty is, that, according to the plan of M. Niebuhr, taken in 1761, Cairo is three leagues in circumference, which is about the fame with Paris, by the line of the Boulevards. Within this fpace is comprifed a number of gardens, courts, vacant grounds and ruins. Now, if Paris, within the Boulevards, does not contain above feven hundred thoufand inhabitants, though the houfes are five ftories high, it is difficult to conceive that Cairo, where they are only two ftories, can contain more than two hundred and fifty thoufand. It is equally impracticable to form a juft eftimate of the population of all Egypt. Neverthelefs, as it is known that the number of towns and villages does not excced two thoufand three hun-
(c) Called karadj; $k$ is here the Spaniif jota:
dred (d), and the number of inhabitants in each of them, one with another, including Cairo itfelf, is not more than a thoufand, the total cannot be more than two millions three hundred thoufand. The cultivable lands, according to Danville, confift of two thoufand one hundred fquare leagues, whence there refults, for each fquare league, one thoufand one hundred and forty-two inhabitants. This number, which is greater than even that of France, may lead us to imagine that Egypt is not fo depopulated as it has been reprefented; but if we obferve that the lands never lie fallow, but are continually productive, it muft be allowed that its population is very little in comparifon of what it has been, and of what it is capable of becoming.

Among the fingularities which appear moft extraordinary to a ftranger at Cairo, may be
(d) Danville had feen two lifts of villages in Egypt; one, which is of the laft century, gives two thoufand fix hundred and nincty-fix towns and villages; the other, of the middle of the prefent century, two thoufand four hundred and ninety-five, nine hundred and fifty-feven of which are in the Said, and one thoufand four hundred and thirty-nine ia the Delta: that 1 have given is of $:, 83$.
mentioned the great number of ugly dogs which roam about the ftreets, and the kites which flkim over the houfes, with frequent and doleful cries. The Muffulmen kill neither of the ee, though they are equally held to be unclean (c); on the contrary, they often throw them the fragments of their tables; and devotees even endow charitable foundations of bread and water for the dogs. Thefe animals have befides the refource of the common fewers, which, however, does not prevent them from fuffering by hunger and thirft ; but it is very aftonifhing that there extremities never occafion madnefs. Profper Alpinus has already made this remark in his treatife on the Phyfic of the Egyptians. Canine madnefs is equally unknown in Syria; the name of the malady, hawever, is to be found in the Arabic language, and is not borrowed from any foreign tongue.
(e) The turtle-doves, which are extremely numerous, build their nefts in the houfes; and even the childrea do not touch them:

## C H A P. XVII.

Of the dijeafes of Egypt.

$$
\begin{aligned}
& \text { S e c T. I. } \\
& \text { Of Blindnefs. }
\end{aligned}
$$

THIS malady, of which fo much as been faid, is not the only remarkable one in Egypt ; there are feveral which equally deferve our notice.

Yet nothing can appear more extraordinary to a ftranger than the prodigious number of perfons whofe fight is either loft or impaired, and which is fo great, that out of a hundred perfons I have met while walking the ftreets of Cairo, twenty have been quite blind, ten wanting an eye, and twenty others have had their eyes red, purulent, or blemifhed. Almoft every one wears a fillet, a token of an approaching or convalefcent ophthalmy ; but nothing aftonifhed me more than the indifference and apathy with which they fupport fo dreadful a misfortune. It zuas decreed,
fays the Muffulman: praife be to God! God bas willed it, fays the Chriftian, blefed be bis name. This refignation is undoubtedly the beft refource when the evil has happened; but, as it prevents an enquiry into the caufe of the diforder, it precludes the difcovery of its cure. Some phyficians among us have written on this diftemper, but, from not being acquainted with all the circumftances, could not treat it with fufficient accuracy. I fhall therefore add a few obfervations, which may: affift others in future enquiries.

Ift. Defluxions on the eyes are not peculiar to Egypt ; they are alfo frequent in Syria; with this difference, that they are there lefs general ; and it is remarkable that the inhabitants of the fea-coaft alone are fubject to them.

2d. In the city of Cairo, which is always full of filth, thefe diforders are more prevalent than in all the relt of Egypt (a). The common people are more liable to them than perfons in eafy circumftances, and the natives more than foreigners. The Mamlouks
(a) It muft be obferved, however, that the blind people of the villages come and refide in the mofoue of forivers, where they have a fort of hofpita!.

Vow. I.
R.
are rarely attacked by them; and the peafants of the Delta, are more fubject to them than the Bedouin Arabs.

3 d. There defluxions happen at no certain feafon, notwithftanding what is faid by Prof= per Alpinus. They are an endemial diforder, common to every month of the year, and to every age.

In reafoning from thefe principles, it feems to me that we cannot admit the foutherly winds as a principal caufe, fince, in that cafe, this complaint would be peculiar to the month of April, and the Bedouins be affected with it like the peafants; nor can we afcribe it to any fubtile duft with which the air is filled, becaufe the peafants are more expofed to this than the inhabitants of towns; the cuftom of fleeping on the terraces has more the appearance of reality (b) ; but this caufe is neither confined to this country, nor is it adequate to the effects afcribed to it; for in countries remote from the fea, as the valley of Balbek, the Diarbekar, the plains of Hauran, and the mountains, the inhabitants fleep alfo on their terraces, and yet their fight is

[^6]not injured. If, therefore, at Cario, throughout the Delta, and on the coaft of Syria, it is dangerous to fleep in the open air, this air muft acquire fome noxious quality from the vicinity of the fea: and this quality doubtlefs is moifture combined with heat, which then becomes a firlt principle of thefe diforders. The faline quality of the air, fo remarkable in the Delta, contributes ftill farther to this, by the irritation and itching it occafions in the eyes, as I have myfelf experienced.

The ufual diet of the Egyptians appears likewife to be a powerful caufe. The cheefe, four milk, honey, confection of grapes, green fruits, and raw vegetables, which are the ordinary food of the people, produce in the ftomach a diforder, which phyficians have obferved to affect the fight ; the raw onions, efpecially, which they devour in great quantities, have a peculiar heating quality, as the Monks of Syria made me remark on myfelf. Bodies thus nourifhed, abound in corrupted humours, which are conftantly endeavouring a difcharge. Diverted from the ordinary channels, by habitual perfpiration, they fly to the exterior parts, and fix themfelves where
they find the leaft refiffance. They therefore naturally attack the head, becaufe the Egyptians, by fhaving it once a week, and covering it with a prodigioufly hot head-drefs, principally attract to that the perfpiration; and if the head receives ever fo flight an impreffion of cold, on being uncovered, this perfiration is fuppreffed, and falls upon the teeth, or ftill more readily on the eyes, as being the tendereft part. On every frefh cold this organ is weakened, and at length finally deftroyed. A difpofition to this diforder, tranfmitted by generation, becomes a frefh caufe of malady; and hence the natives are more expofed to it than ftrangers. It will appear more probable that the exceffive perfpiration of the head is a principal caufe, when we reflect that the ancient Egyptians, who went bare headed, are not mentioned by phyficians as being fo much afflicted with ophthalmies (c); and that the Arabs of the defert, who cover it very little, efpecially when young, are equally exempt from them.
(c) Hiftory, however, informs ins that feveral of the Pharaohs died blind.

> SECT:
S E C T. II.
Of the Small pox.

Blindnefs in Egypt is in many inftances occafioned by the confequences of the fmall pox. This diforder, which is very fatal in that country, is not treated after a good method; during the three firft days, debs, or confection of grapes, honey, and fugar, are adminiftered to the fick, and, after the reventh, they are allowed milk, meat, and falt-fifh, as if they were in full health; at the period of fuppuration, they are never purged, and they particularly avoid walhing their eyes, though they are full of matter, and their eyelids clofed by the glutinous matter; this operation they never perform till after forty days, and, in that time, the pus, by irritating the ball, has produced an inflammation which affects the whole eye. Not that inoculation is unknown among them, but they make little ufe of it. Nor is it more practifed by the Syrians and the inhabitants of $R_{3}$ Anadolia,

Anadolia, who have long been acquainted with it (d).

This improper regimen is certainly far more pernicious than the climate, which is by no means unhealthy (e). To unwholefome food, efpecially, muft we attribute both the deformity of the beggars, and the miferable appearance of the children at Cairo, which are no where to be met with fo mifhapen and wretched. Their hollow eyes, their pale and puffed faces, fwollen bellies, meagre extremities, and yellow fkins, make them always feem as if they had not long to live. Their ignorant mothers pretend that this is the effect of the evil cye of fome envious perfon, which has bewitched them; and this ancient prejudice $(f)$ is fill general in Turkey; but the real caufe is the badnefs of their food. In fpite of the Talifmans, there-
(d) They perform the operation by inferting a thread into the flefh, or by making the patient inhale, or fwallow, the powder of dried puftules.
(e) The Mamlouks are a proof of this, who, from wholefome diet, and a proper regimen, enjoy the moft robuft ftate of health.
(f) Nefcio quis teneros ocklus mibi fafcinat agnos. Virgit,
fore ( $g$ ), an incredible number of them perilh, nor is any city more fatal to the population of the neighbouring country than Grand Cairo.

Another very general diftemper at Cairo, is that which the vulgar there call the bleffed evil, and which we alfo improperly term the Neapolitan diforder: one half of Cairo is infected with it. The greateft part of the inhabitants believe it proceeds from frigbt, from witchoraft, or from uncleanlinefs. Some of them fufpect the real caufe; but as that is connected with a fubject on which they are remarkably referved, they chufe not to mention it. This bleffed evil is very difficult to cure; mercury, under whatever form adminiftered, generally fails: fudorific vegetables fucceed better, without being however infallible; happily, the virus is not very active, on account of the great natural and artificial perfpiration. We fee there, as in Spain, old men carrying this diforder about them to the
(g) We often fee, in Egypt, little pieces of red ftuff, or branches of coral, and coloured glafs, hanging on the faces of children, and even of grown perfons. Thefe are fuppofed, by their colour and motion, to fix the firft glance of the envious, for it is that, they fay, which Arikes.
age of eighty. But its effects are fatal to children born with the infection. The danger is imminent for fuch as carry it into a cold country; for it there never fails to make a rapid progrefs, and thews itfelf always more inveterate from this tranfplantation. In Syria, at Damafcus, and in the mountains, it is the more dangerous, as the winter is very fevere there: when neglected, it terminates in all its well-known fymptoms, as I myfelf witneffed in two inftances.

There is a troublefome complaint peculiar to the climate of Egypt, which is a cutaneous eruption that returns every year. Towards the end of June, or the beginning of July, the body is covered with red fpots and pimples, the fmarting of which is very troublefome. Several phyficians, perceiving that this eruption regularly happened at the time of the new waters, have been of opinion, that it was occafioned by the falts with which they fuppofed thefe waters impreg. sated; but the exiftence of there falts is not proved, and a more fimple realon may be affigned. I have already faid, that the waters of the Nile become corrupted, towards the end of April, in the bed of the river,
and, when drunk, produce humours of a malignant quality. When the new water arrives, it occafions a fort of fermentation in the blood, the refult of which is to feparate the vicious humours, and expel them towards the fkin, whither they are invited by the perfpiration. It is, in its effect, a real purgative depuration, and is always falutary.

Another difeafe, but too common at Cairo, is a fwelling of the tefticles, which frequently turns to an enormous hydrocele. It is obferved to attack, principally, the Greeks and Copts, and hence arifes the fufpicion that it is occafioned by the great quantity of oil which they make ufe of two-thirds of the year. It is conjectured, alfo, that the hotbaths contribute to it, the immoderate ufe of which produces other effects not lefs injurious to the health (b). I fhall remark
(b) The Egyptians, and the Turls in general, have a fondnefs for the ftove-baths, difficult to account for in a ountry fo hot as theirs: but this appears to me to arife more from prejudice than the pleafure they find in them. The law of the Koran, which enjoins men a complete ablution after the conjugal act, is of itfelf a very powerful mutive; and the vanity they attach to its execution
on this occafion, that in Syria, as well as in Egypt, conftant experience has proved that brandy diftilled from common figs, or from the fruit of the fycamore tree, as well as that extracted from dates, and the fruit of the nopal, has a moft immediate effect on the tefticles, which it renders hard and painful the third or fourth day after it has been ufed as drink ; and if the ufe of it be not difcon-
is another not lefs efficacious: as for the women they have other motives; Firft, the bath is the only place in which they can make a parade of their luxury, and regale themfelves with melons, fruits, paftry, and other delieacies. Secondly, they believe, as Profper Alpinus has obferved, that the bath gives them that embonpoint which palles for beauty. With refpect to ftrangers, their opinions differ according to their taftes. Many merchants of Cairo are pleafed with the baths, others have found them difagrecable. For my part, I found the bath produce in mea vertigo, and trembling at the knees, which lafted two days. I confefs it is very extraordinary that a water really fcalding, and a profufe fweat, forced out by the convulfions of the lungs, as well as by the heat, fhould be confidered as giving fo much pleafure; nor do 1 envy the 'Turks eitier their opium, or their ftoves, or their too complaifant Mafers!
(Theic liajers are boys who knead the flem, crack all the joints, fcrape off the fcurf, cradicate the fuperfluous hairs, rub the body gently, aind are faid to be fubfervient to the pleafures of the bather. T.)

tinued,

tinued, the diforder degenerates into a confirmed hydrocele.

Brandy made from dried raifins has not the fame bad effect; it is always mixed with annifeeds, and is very ftrong, being diftilled even three times. The Chriftians of Syria, and the Copts of Egypt, make great ufe of it; the latter, efpecially, drink whole bottles of it at their fupper: I imagined this an exaggeration, but I have myfelf had ocular proofs of its truth, though nothing could equal my aftonifhment that fuch exceffes do not produce inftant death, or, at leaft, every fymptom of the moft infenfible drunkennefs.

The fpring, which in Egypt is the fummer of our climates, brings with it malignant fevers, which foon arrive at a crifis. A French phyfician, who has had opportunities to obferve a great number of them, has remarked, that the bark, given in the intermiffions, in dofes of two or three ounces, has frequently faved the patient at the laft extremity (i). As foon as the diforder appears, the patient muft be rigorounly reftricted to a vegetable
(i) The next day he always adminifters a clyfter to expel the bark.
acid regimen; meat is prohibited, fifh likewife, and above all, eggs ; the latter are a fort of poifon in Egypt. In this country, as in Syria, experience proves that bleeding is always more injurious than beneficial, even in cafes where it appears to be moft neceffary: the reafon of which is, that bodies nourimhed with unwholefome aliments, fuch as green fruits, raw vegetables, cheefe and olives, have, in fact, but little blood, and a great quantity of humours; their habit is generally bilious, as appears from their eyes and their black cye-brows, their brown complexion, and meagre make. Their habitual malady is the cholic; almoft all of them complain of a fourners in the throat, and an acid naufea; emetics and cream of tartar are therefore very generally fuccefsful.

The malignant fevers become fometimes epidemic, in which cafe they are eafily miftaken for the plague, of which I fhall next fpeak.
S e c T. III.
Of the Plague.

Some perfons have attempted to eftablifh an opinion that the plague is of Egyptian origin ; but this fuppofition, founded on vague prejudices, feems to be difproved by facts. The European merchants who have been fettled for many years at Alexandria, concur with the Egyptians in declaring that the plague never proceeds from the interior of the country ( $k$ ), but firft makes its appearance, on the coaft, at Alexandria; from Alexandria it paffes to Rofetta, from Rofetta to Cairo, from Cairo to Damietta, and through the reft of the Delta. They further obferve, that it is invariably preceded by the arrival of fome veffel coming from Smyrna or Conftantinople; and that if the plague has been violent in one of thefe cities during
(k) Profper Alpinus, a Venetian phyfician, who wrote in 159r, fays alfo, that the plague is not of Egyptian origin ; that it is brought from Greece, Syria, and Barbary; that the heats deftroy it, \&c. See Medecina IF sypticurum, p. 28 .
the fummer, the danger is the greater for themfelves the following winter. It appears certain, that it really originates from Conftantinople, where it is perpetuated by the abfurd negligence of the Turks : this is carried fo far that they publicly fell the effects of perfons dead of that diforder. The Mips which go to Alexandria never fail to carry furs and woollen cloths purchafed on thefe occafions, which they expofe to fale in the Bazar of the city, and thereby fpread the contagion. The Greeks who carry on this commerce are almoft always the firf victims. By degrees the diforder reaches Rofetta, and at length Cairo, following the ufual road of the merchandize. As foon as it is confirmed, the European merchants fhut themfelves and their domeftics up in their Kans, and have no further external communication with the city. Their provifions, depofited at the gate of the Kan, are received there by the porter, who takes them up with iron tongs, and plunges them into a barrel of water provided for this purpofe. If it is neceffary to Speak to any one, they always keep at fuch a diftance as to prevent touching with theit clathes, or breathing on one another; by
thefe means they preferve themfelves from this dreadful calamity, unlefs by fome accidental neglect of thefe precautions. Some years ago, a cat which paffed by one of the terraces into the dwellings of our merchants at Cairo, conveyed the plague to two of them, one of whom died.

It will eaflly be imagined what a tirefome ftate of imprifonment this mult be: it continues for three or four months, during which time they have no other amufement than walking, in the evening, on the terraces, or playing at cards.

The plague affords feveral very remarkable varieties. At Conftantinople it prevails during the fummer, and is greatly weakened, or entirely ceafes, during the winter. In Egypt, on the contrary, it is moft violent in winter, and infallibly ends in the month of June. This apparent contrariety may be explained on the fame principle. The winter deftroys the plague at Conftantinople, becaufe the cold there is very fevere, and the fummer revives it, becaufe the heat is very humid, on account of the feas, forefts, and adjacent mountains. In Egypt, the winter nourifhes the
plague,
plague, becaufe it is mild and humid; but the fummer deftroys it, becaufe it is hot and dry. It feems to act on it as on flefh meat, which it does not fuffer to corrupt. Heat is not prejudicial, but as it is combined with humidity (l). Egypt is afflicted with the plague every fourth or fifth year, and the raw vages it caufes would depopulate the country, were it not for the great numbers of ftrangers who refort thither from all parts of the empire, and in a great meafure repair its loffes.

In Syria the plague is much lefs common: five-and-twenty years have elapfed fince it has been known there. This arifes, no doubt, from the fmall number of veffels which come directly from Conftantinople. It is remarked likewife, that it does not naturalize itfelf fo eafily to that province. When broughe from the Archipelago, or even from Damietta, into the harbours of Latakia, Saide, or Acre, it will not fpread : it rather chufes
(l) At Cairo, it is coferved, that the water-carriers, continually wet with the frefl water they carry in fkins upon their backs, are neiever fubject to the plague; but in this cafe it is lotion, and not humidity.

$$

preliminary circumftances, and a combined route; but when it paffes directiy from Cairo to Damafcus, all Syria is fure to be infected.

The doctrine of predeftination, and fill more the barbarifm of the government, have hitherto prevented the Turks from attempting to guard againft this deftrucive diforder: the fuccefs, however, of the precautions taken by the Franks, has of late begun to make fome impreffion on many of them. The Chriftians of the country who traffic with our merchants, would be difpofed to fhat themfelves up like them; but this they cannot do without the authority of the Porte. It feems, indeed, as if the Divan would at length pay fome attention to this object, if it be true that an edict was iffued laft year for the eftablifhment of a Lazaretto at Conftantinople, and three others at Smyrna, Candia, and Alexandria. The government of Tunis adopted this wife meafure fome years ago: but the Turkifh police is cvery where fo wretched, that little fuccefs can be hoped for from thele eftablifhments, notwith-
Vol. 1.
ftanding
ftanding their extreme importance to commerce, and the \{afety of the Mediterranean itates $(m)$.
(in) The very laft year afforded a proof of this, fince as violent a plague as ever was known, broke out there. It was brought by veffels coming from Conftantinople, the mafters of which corrupted the guards, and came into port without performing quarantine.

## C H A P. XVIII.

Defcriptive Jketch of Egypt refumed.

EGYPT might ftill furnifh matter for many other obfervations; but as they are either foreign to my purpofe, or may be included in thofe which I fhall have occafion to make on Syria, I fhall purfue them no farther.

If the reader remembers my defcription of the nature and afpect of the country; if he figures to himfelf a flat plain, interfected with canals, under water during three months, verdant and boggy for three others, and dufty and full of cracks the remainder of the year: if on this he imagines a number of wretched mud-walled and brick villages, naked and fun-burnt peafants, buffaloes, camels, fycamore and date-trees thinly fcattered, lakes, cultivated fields, and vacant grounds of confiderable extent; and adds befides a fun darting his rays from S 2
an azure fky , almoft invariably free from clouds; and winds conftantly blowing, but not always with the fame ftrength, he will have formed a tolerably juft idea of the natural alpect of this country. He may have judged of the civil ftate of the inhabitants from their divifion into tribes, fects, and claffes; from the nature of a government, which neither refpects the perfon or property of its fubjects; and from the abufes of an unlimited power entrufted to a rude and licentious foldiery. He may in fhort have formed a juft eftimation of the ftrength of this government, by confidering its military eftablifhment, and the character of its troops, by obferving that, throughout all Egypt and on its frontiers, there is not a fingle fort nor redoubt, neither artillery nor engineers; and that its whole navy confifts in twenty-eight veffels and cayaffes of Suez, armed each with four rufty fwivels, and manned by failors who know not even the ufe of the compafs.

From thefe facts the reader may judge for himfelf what opinion he ought to form of this country, which I may have repre fented
fented in a different point of view from fome other writers ( $n$ ). He ought not to be aftonifhed at this diverfity; nothing can differ more than the judgments of travellers refpecting the countries they have vifited: one will frequently difparage what another has extolled; and defcribe as a Paradife what he who comes after him may confider as having no charms. They are particularly reproached with this contrariety of opinions, but it is in fact common to them and their critics, fince it is founded in the very nature of things. Notwithftanding all our efforts, our judgments are much lefs direct. ed by the real merits of objects, than by the impreffions we receive, or carry with us in viewing them. Daily experience demonftrates that foreign ideas always obtrude themfelves; and hence it is that the fame country which appears beautiful to us at one moment, feems equally difagreeable at another. Befides that it is impoffible to difengage ourfelves from the prejudices of early habits. The inhabitant of the mountains diflikes the plain; the inhabitant of the plain is difpleafed with the mountains.

The Spaniard wihnes for a clear flky; the Dane prefers thick weather. We admire the verdure of our fields. The Swede is better pleafed with the whitenefs of his fnow; and the Laplander, tranfported from his fmoky hut, would die with heat and melancholy in the groves of Chantilly. Every man has his taftes, according to which he judges. To an Egyptian, I conceive that Egypt is, and always will be, the moft beautiful country upon earth, though he has never beheld any other. But if I may be permitted to give my judgment, from what I have myfelf feen, I confefs that I cannot entertain fo high an opinion of it. I am willing to do juftice to its extreme fertility, to the variety of its productions, and the advantages of its fituation for commerce; I admit that Egypt is but little fubject to the variations of weather, which occafion the failure of harvets with us; that the hurricanes of America are unknown there; that the earthquakes which have laid wafte Portugal and Italy in our days, are there extremely rare, though not without example ( 0 ). I admit even that the
(0) There was a very violent one, for inflance, in the year 1112.
heat, which is fo infupportable to Europeans, is no inconvenience to the natives; but the deftructive foutherly winds are certainly a very real evil: the wind from the north_eaft too is no fmall inconvenience, as it is the forerunner of violent head-achs; and another objection to be made, is that multitude of fcorpions, gnats, and efpecially flics, which are fo numerous, that it is impoffible to eat without running the rifk of fwallowing them. Befides, no country prefents fuch a famenefs of afpect. A boundleís naked plain; an horizon every where flat and uniform ( $p$ ); date-trees with their flender trunks, or mudwalled huts on the caufeways, are all it offers to the eye, which no where beholds that richnefs of landfcape, that variety of objects, or diverfity of fcenery which true tafte finds fo delightful. No country is lefs picturefque, lefs adapted to the pencil of the painter, or the defcriptions of the poet: nothing can be feen of what conftitutes the charm and beauty of their pictures; and it is remarkable that neither the Arabs, nor the
( $p$ ) The reader may confult the views in Norden, in which this is very confpicuous.
ancients make any mention of Egyptian poets. What indeed could an Egyptian fing on the reed of Gefner or Theocritus? He fees neither limpid ftreams, nor verdant lawns, nor folitary caves ; and is equally a ftranger to vallies, mountain fides, and pendent rocks.

Thompfon could not there have known either the whifling of the winds in the foreft, the rolling of thunder among the mountains, or the peaceful majefty of ancient woods; he could not have obferved the awful tempeft, nor the fweet tranquillity of the fucceeding calm. The face of nature, there eternally the fame, prefents nothing but well fed herds, fertile fields, a muddy river, a fea of freh water, and villages which, rifing out of it, refemble iflands. Should the eye reach the horizon, we are terrified at finding nothing but favage deferts, where the wandering traveller, exhaufted with fatigue and thirft; fhudders at the immenfe fpace which feparates him from the world. In vain he implores heaven and earth : his cries, loft in the boundlefs plain, are returned to him only by feeble echoes; deftitute of every thing, and feparated from mankind, he perifhes in an agony of defpair,
amid a gloomy defart, without even the confolation of knowing he has excited the fympathifing tear. The contraft of this melancholy fcene, fo near, has probably given to the cultivated fields of Egypt all their charms. The barrennefs of the defert becomes a foil to the plenty of the plains, watered by the river; and the afpect of the parched fands, fo totally unproductive, adds to the pleafures the country offers. Thefe may have been numerous in former times, and might revive under the influence of a good government: but at prefent, the riches of nature produce not the fruits which might be expected. In vain do travellers celebrate the gardens of Rofetta, and of Cairo. The Turks are ftrangers to the art of gardening, fo much cultivated by polifhed nations, and defpife every kind of cultivation. Throughout the empire their gardens are only wild orchards, in which trees are planted without care or art, yet have not even the merit of irregularity. In vain may they tell us of the orange-trees and cedars, which grow naturally in the fields. Accuftomed as we are to combine the ideas of opulence and culture with thefe trees,
fince with us they are neceflarily connected with them, we do not difcover the deception. In ${ }^{\text {Egypt, where they are frequent, and, as I }}$ may fay, vulgar, they are affociated with the mifery of the huts they cover, and recall only the idea of poverty and defolation. In vain do they defcribe the Turk foftly repofing under their hade, and happy in fmoking his pipe without reflection. Ignorance and folly, no doubt, have their enjoyments, as well as wit and learning; but, for my own part, I confefs I could never bring myfelf to envy the repofe of haves, or to dignify infenfibility with the name of happinefs. I fhould not even have been able to conceive from whence could proceed the enthufiafm with which fome travellers have extolled Egypt, had not experience revealed to me the fecret motives.

$$
S E \subset T . \text { II. }
$$

Of the cxaggerations of Travellers.
It has long been remarked, that travellers particularly affect to boaft of the countries through
through which they themfelves have travelled, infomuch that the exaggeration of their relations having been frequently difcovered, we have been warned by a proverb, to be on our guard againft their falfehoods $(q)$; but the error ftill remains, becaufe the caufes have not ceafed. Thefe in fact originate with every one of us, and the reproach not unfrequently belongs even to thofe who make it. For, let us obferve a traveller, newly arrived from fome diftant country, and endeavouring to amufe the idlenefs and curiofity of the company around him. The novelty of his relation procures him attention, which even extends to perfonal refpect. He is loved becaufe he amufes, and becaufe his pretenfions claih not with thofe of others. On his fide, he is foon fenfible that he ceafes to be interefting, when he can no longer raife new ideas. The neceffity of fupporting, the defire even of increafing this power of pleafing, induce him to beftow higher colouring on his pictures; he paints the greateft objects, that they may be the more ftriking; and his fuccefs encourages him to pro-

[^7]ceed. He catches the enthufiafm of his hearers, and, Shortly, a kind of emulation takes place between him and his auditors, by which he returns, in wondrous narrative, what he receives in admiration. The marvellous in what he has feen, is reflected, firft upon himfelf, and, by a ufual confequence, on thole who have heard, and in their turn relate it. Thus does vanity, which pervades every thing, become one of the caufes of the propenfity we all have, either to believe, or recount prodigies. We have befides left defire to be inftructed than amufed, and it is from there reafons that tale-makers of every kind, have always held a diftinguifhed rank in the efteem of mankind, and in the clays of writers.

There is alpo another cause of the enthufiafm of travellers. Remote from the objects which have given us pleafure the imagination takes fire; absence again inflames defire, and the fatiety of furrounding enjoyments beftows a new charm on whatever is no longer within our reach. We regret a country from which we were often anxious to efcape; and pleafe ourfelves with the remembrance of places in which, were we there, we could
not bear to remain. Travellers who have only paffed through Egypt, are not to be ranked in this clafs as they have not time to lofe the illufion of novelty; but this remark applies to whoever has made a long refidence in the country. Our merchants know it ; and have made a very jult obfervation on this fubject: they remark that thofe among them, who have experienced the greateft inconveniencies from refiding in a foreign country, are no fooner returned to France, than every thing difagreeable is effaced from their memory; their recollection affumes cheerful colours, and in two years after, one would not imagine they had ever been there. "Do you ftill think pro" perly of us, and our fituation," wrote a refident at Cairo to me lately? "D Do " you retain juf ideas of this place of " mifery $(r)$; for we have experienced that
(r) No perfon has lefs reafon than myfelf to be diffatisfied with Egypt; I experienced from our merchants in that country the utmof generofity and politenefs; I never met with any difagreeable accident, nor was even obliged to alight in reverence of the Mamlouks. It is true that, notwithfanding it is held fo difgraceful, I always walked on foot in the ftreets.
" all thofe who return to Europe, fo far for" get them as to aftoninh us?" Such general and fuch powerful caufes would not have failed to produce their ufual effect upon myfelf, had I not taken particular pains to guard myfelf againft them, and to retain myformer impreffions, in order to give my deferiptions the only merit they can have, that of truth. It is time now to proceed to objects more extenfively interefting; but, as the reader would not pardon me fhould I quit Egypt without mentioning the ruins and the pyramids, I fhall content myfelf with beftowing on them a few words.

## C H A P. XIX.

Of the ruins and the pyramids.

IIHAVE already explained how much the conftant difficulty of travelling in Egypt, which has increafed of late years, is unfavourable to refearches into antiquities. For want of means, and above all of favourable circumftances, we are reduced to be content with feeing what others have already feen, and to relate nothing but what they have already publifhed. For this reafon, I fhall not repeat what has been repeated more than once in Paul Lucas, Maillet, Sicard, Pocock, Greaves, Norden, and Niebuhr, and fill more lately in the Letters of M. Savary. I fhall confine myfelf to a few general confiderations.

The pyramids of Djiza are a ftriking example of the difficulty which I have already faid attends the making of obfervations. Though only four leagues diftant from Cairo, where the Franks refide, though they have been vifited by a crowd of travellers, their
true dimenfions are not yet known with certainty. Several times has their height been meafured by geometrical methods, and each operation has given a different refult (a). In order to decide this queftion, a new and accurate menfuration fhould be undertaken by perfons of known abilities. In the interim, however, we may fafely affert that thofe are miftaken who have affirmed the height of the great pyramid is equal to the length of the bafe, fince the angle at the vertex is fenfibly too large. The knowledge of the true length of this bafe appears to me the moreinterefting, as I am inclined to think it has fome affinity with one of the fquare meafures of the Egyptians; and if the dimenfions of the ftones fhould be fouisd frequently the fame, we may poffibly from them deduce their other meafures.

The difficulty of underftanding the defcription of the infide of the pyramid, has been frequently complained of, and, in fact, without being well verfed in the nature of
(a) To the lift of there differences, given by M. Savary, may be added a late menfuration, which affigns fix hundred feet to each face of the Great Pyramid, and four hundred and eighty-feet for its perpendicular height.
plans
plans, it is not eafy to form any adequate idea from engravings. The bert method to convey fuch an idea of it, would be to form of clay, or baked earth, a pyramid in miniature, in the reduced proportion, for inftance, of an inch to a toife. Such an imitation would be eight feet four inches at the bafe, and near feven and one half in height. By cutting it into two portions from top to bottom, it would be pofible to form the firft channel, which defcends obliquely, the gallery which afcends in the fame manner, and the fepulchral chamber at the extremity. Norden would furnih the beft defcription; but fuch a model mult be executed by an artift accuftomed to this fort of work.

The ledge of rock on which the pyramids are built does not rife more than forty or fifty feet above the level of the plain. The flone of which it confifts, is, as I have faid, white and calcareous, of a grain fimilar to that known in fome provinces under the name of Rairic. That of the pyramids is of a fimilar nature. It was imagined, at the beginning of the prefent century, on the authority of Herodotus, that the materials of which they have been built had been brought
Vol. I.
T
from
from a diftance ; but travellers, observing the refemblance I am Speaking of, think it more natural to conclude they were taken from the rock itfelf; and, at this day, the narrative of Herodotus is treated as a fable, and fuch a removal of the ftones as an absurdity. It has been calculated that the levelling of the rock would furnish nearly enough, and the deficiency is fupplied by fuppofed fubterranean cavities, which are magnified at pleafare. But if the ancient opinion have its improbabilities, the modern fyitem is mere fuppofition. It is by no means an adequate motive of judging, to fay: " it is incredible " they fhould have transported whole quarries " from fuch a diftance, and absurd to mul" tiply expences to fo enormous an amount." In whatever relates to the opinions, and governments of ancient nations, it is difficult to fay what is probable. However inprobable therefore the fact in question may feem, if we confider that the hiftorian who relates it drew his materials from the original archives of the ancient Egyptians; that he is remarkably accurate in every thing we are able to verify; that the Lybic rock no where prefents elevations fimilar to those which
which are fuppofed, and that the fubterranean cavities remain fill to be difcovered; if we recollect the immenfe quarries which extend from Saouadi to Manfalout, for the fpace of five-and-twenty leagues; if we re-flect, in fhort, that the fones extracted from them, which are of the fame kind, were for no other vifible purpofe ( $b$ ); we fhall at leaft be tempted to fufpend our judgment, until the fact be decided by better evidence.

Other writers, in like manner, tired of the opinion that the pyramids were tombs, have converted them into temples or obfervatories. They confider it as abfurd to fuppofe a wife and polifhed nation would think the fepulchre of its king a matter of fo much importance, or that a prince would impoverifh his people by forced labours, merely to enclofe a fkeleton of five feet in a mountain of ftones; but I repeat it, we judge of the ancients improperly, when we make our own opinions and cuftoms a ftandard of comparifon. The motives which influenced them,
(b) I do not mean the pyramids of Djiza only, but all of them in general. Some of them, fuch as thofe of Bayamout, are neither founded on rocks, nor are there any rocks near., See Pococke.
may appear to us extravagant, and poffibly may really be fo in the eye of reafon, without having been lefs powerful, or lefs efficacious. Befides, we muft engage in endlefs and idle contradictions of all hiftory, to fuppofe in them a widdom conformable to our principles: we reafon too much from our own ideas, and do not fufficiently attend to theirs. But from whichever we reafon in the prefent difpute, we may affirm that the pyramids never can have been aftronomical obfervatories (c), fince Mount Mokattam would have afforded a fill more elevated fituation, and which bounds the former ; becaufe every elevated obfervatory is ufelefs in Egypt, where the country is very flat, and where the vapours hide the fars for feveral degrees above the horizon ; becaufe it is impracticable to afcend to the top of the pyramids in general ; and becaufe it could not have been neceffary to erect clecen obfervatories fo near each other
(i) It has been alleged the pyramids are built fo as to correfpond with the four cardinal points; but the ancients, in the greateft part of their monuments, have obferved this practice, and it was well adapted to tombs, which, from their ideas of a refurrection, 'Tartarus, Elyfum, \&ic. were connceicd with aftronomy:
EGYPT AND SYRIA.
as the eleven pyramids of different fizes, which may be feen from Djiza. From thefe reafons, we fhall be led to think that Plato, who firft fuggefted the idea in queftion, could only have fome particular cafes in view, or that he has in this inftance only his ordinary merit of an eloquent writer.

If, on the other hand, we weigh the teftimonies of the ancients, and local circumftances ; if we obferve that near the pyramids there are thirty or forty monuments, whicin prefent rough outlines of the fame pyramidal form ; that this fterile fpot, remote from all cultivable land, poffeffes the qualities requifite, for an Egyptian cemetery, and that near it was that of the whole city of Memphis, the Plain of Mummies, we Chall no longer doubt that the pyramids are only + tombs. We fhall ceafe to wonder that the defpots of a fuperftitious people fhould have made it a point of importance and pride, to build for their fkelctons impenetrable habitations, when we are informed that, even before the time of Mofes, it was a dogma at Memphis, that fouls at the expiration of fix thoufand years, fhould return to the bodies they had quitted. It was for this rea-
fon that fo much pains were taken to preferve the body from putrefaction, and that endeavours were made to retain cven its form, by means of fpices, bandages, and farcophagi. That which is fill in the fepulchral chamber of the great pyramid, is precifely of its natural dimenfions ; and this chamber is fo obfcure and narrow (d), that it never can have contained mare than one dead body. Attempts have been made to difcover fome myftery in the fubterranean cavity which defcends perpendicularly within the pyramid, forgetting that it was the uniform practice of all antiquity to contrive communications with the infide of their tombs, in order to perform, on certain days prefcribed by their religion, the cuftomary ceremonies; fuch as libations, and offerings of food to the deceafed. We muft recur, therefore, to the ancient opinion, antiquated as it may feem, that the pyramids are tombs ; and this hypothefis, fayoured by a variety of circumftances, is ftill more confirmed by their name, which, according to an analyfis conformable to every
(d) It is thirteen paces long by eleven wide, and nearly of the fame height.
principle of etymology, I think I have difcovered to fignify cbowber, or cave of the dead (e).
(e) The Englifh and French word pyramid, is the Greek Hú̧x́uss, IIvgapuios; but in the ancient Greek, the $v$ was pronounced 00 ; we flould therefore lay pooramis. When the Greeks, after the Trojan war frequented Egypt, they could not have in their language the name of thefe prodigious edifices, which muft have been new to them; they muft have borrowed it from the Egyptians. Pooramis then is not Greek, but £gyptian. Now it appears certain that the dialects of Egypt, which were various, had a great analogy with thofe of the neighbouring countries, fuch as Arabic and Syriac. In thefe languages it is certain the letter $p$ is unknown; but it is no lefs true, that the Greeks, in adopting barharous words, almoft always changed them, and frequentiy confounded one found with another, which refembled it. It is certain alfo, that ' in the words we know, $p$ is continually taken for $b$, which very much refembles it. Now, in the dialect of Palcfine, bour (בור) fignifies cvery excavation of the earth, a ciflern, a prifon properly under ground, a fepulchre. (See Buxtorf, Lexicon Hebr.) There remains amis, in which the final s appears to me a termination fubftituted for $t$, which did not fuit the genius of the Greek tongue, and which made the oriental (n) a-mit, of the dead, bour a-mit, cave of the dead; this fubftitution of the $s$ for $t$, has an example in atribis, well known to be atribit. The learned may determine whether this etymology be not equally plaufible with many others.

The great pyramid is not the only one which has been opened. There is another at Sakara, the infide of which appears conftructed in the fame manner. A few years ago, one of the Beys tried to open the third in fize of thofe that are at Djiza, to obtain the fuppofed treafure he imagined concealed there. He attempted this on the fame fide, and at the fame height at which the great one has been opened; but after forcing out two or three hundred ftones, with confiderable labour and expence, he relinquifhed his avaricious enterprize. The time when the greateft part of the pyramids were built is unknown, but that of the great one is fo evident, that it hould never have been called in queftion. Herodotus attributes it to Cheops, with a detail of circumftances which prove his authors were well informed ( $f$ ). But Cheops, in his lift, which is the beft
(f) This prince, he tells us, reigned fifty years, twenty of which he cmployed in building the pyramids. The third part of the inhabitants of Egypt were cmployed, by forced fervice, in hewing, tranforting, and raifing the ftones.

$$
E G Y P \text { T } A N D \text { SYRIA. } 28 \text { R }
$$

extant, is the fecond king after Proteus ( $g$ ), who was cotemporary with the Troja: war ; whence it follows, that this pyramid was erected about one hundred and forty, or one hundred and fixty years after the building of Solomon's Temple, or eight hundred and $\mathcal{f} \delta$ fixty years before Chrift.

Deftructive time, and the fill more deftructive hand of man, which have fo defaced and deftroyed all the other monuments of antiquity, hąve hitherto been able to effect but little againft the pyramids. The folidity of their conftuction, and their enormous fize, have fecured them againft every attempt, and feem to promife them an eternal duration. All travellers fpeak of them with enthufiafm, and enthufiafm they may well infpire. Thefe artificial mountains are firt difcovered at ten leagues diftance. They feem to retire in proportion as they are approached ; and when ftill a league off, tower with fuch loftinefs

[^8]above our heads, that we imagine ourfelves at their feet; but when at length we reach them, nothing can exprefs the various fenfations they infpire (b). Their ftupendous height, the fteep declivity of their fides, their prodigious furface, their enormous folidity, the diftant ages they recall to memory, the recollection of the labour they muft have coft, and the reflection that thefe huge rocks are the work of man, fo diminutive and feeble, who crawls at their feet, loft in wonder,
(b) I know nothing, at Paris, fo proper to give an idea of the pyramids, as the Hotel des Invalides, feen from the Cours la Reine. The length of that building, being fix hundred feet, is precifely the fame as the bafe of the great pyramid; but to conceive their height and folidity, we muft fuppofe the front I have mentioned to rife into a triangle; the perpendicular of which Mould exceed the height of the dome of that building by two thirds of the dome itfelf, (it is three hundred feet high.) The fame furface muit be repeated on the four fides of the fquare, and the whole mafs contained in them be fuppofed folid, and offer to view nothing but an immenfe flope on every fide, difpofed in fteps.
[The Englifh reader has only to fuppofe the vaft 〔quare of Lincoln's-inn-fields, the dimenfions of which are the exact bafe of the great pyramid, wholly filled up from fide to fide, and gradually rifing in a pyramidal form, to a height exceeding that of St. Paul's, by at leaft one third. T.]
awe, humiliation, and reverence, altogether imprefs the mind of the fpectator in a manner not to be defcribed; but to this firlt tranfport other fentiments foon fucceed. Elevated as we are with fo exalted a proof of the power of man, when we confider the purpofe for which thefe amazing works were intended, we cannot but view them with regret. We lament, that to conftruct a ufelefs fepulchre, a whole nation fhould have been rendered miferable for twenty years: we groan over the numberlefs acts of injuftice and oppreffion thefe tirefome labours muft have coft, in conveying, preparing, and piling up fuch an immenfe mafs of ftones; and we are inflamed with indignation at the tyranny of the defpots who enforced thefe barbarous works, a fentiment indeed which too frequently recurs on viewing the different monuments of Egypt. Thofe labyrinths, temples, and pyramids, by their huge and heavy ftructure, atteft much lefs the genius of a nation, opulent and friendly to the arts, than the fervitude of a people who were flaves to the caprices of their monarchs; and we are even inclined to pardon that avarice, which, by violating

284 TRAVELS JN
violating their tombs, has fruftrated their idle hopes: we beftow lefs pity on thefe ruins; and while the lover of the arts beholds with indignation, at Alexandria, the columns of her palaces fawed into mill-fones, the philofopher, after the firft emotion, occafioned by the deftruction of every fine work, cannot fupprefs a fmile at the fecret juftice of that deftiny, which reftores to the people what coft them fo much fruitlefs toil, and which renders the pride of unprofitable luxury fubfervient to the meaneft of neceffities.

The happinefs of the people, rather than the prefervation of the ancient monuments of Egypt, fhould certainly dictate the wifh of feeing that country under the government of another nation; but were it only in the latter point of view, fuch a revolution would ftill be very defirable. Were Egypt poffeffed by a nation friendly to the fine arts, difcoveries might be made there, which would make us better acquainted with antiquity than any thing the reft of the world can afford us. Perhaps even books might be found. It is not above three years ago, that upwards of + one hundred volumes, written in an unknown language,

## EGYPT AND SYRIA. 285

language, were dug up near Daınietta ( $i$ ), but immediately committed to the flames, by command of the Shaiks of Cairo. Indeed the Delta no longer affords any very interefting ruins, as they have been all deftroyed by the wants, or the fuperfition of the inhabitants. But the Said, which is lefs inhabited, and the edge of the defert, fill lefs. peopled, pofiefs feveral yet untouched. We may hope to find them ftill more certainly in the Oafes, thofe iflands feparated from the world by an ocean of fand, where no traveller we know of, has ever penetrated fince the time of Alexander. Thefe countries, in which formerly were cities and temples, having never been fubject to the devaftations of the Barbarians, muft have preferved their monuments, and the rather as it is probable they are but thinly inhabited, or perhaps entirely deferted; and thefe monuments, buried in the fands, muft be preferved there, as a depofite for future generations. To a period lefs remote, poffibly than we imagine, we mult defer the gratification of our wifhes and our
(i) I have this fact from fome merchants of Acre, who told it me on the credit of a Marfeilles Captain, who, at that time was taking in a cargo of rice at Damietta.
hopes. We may then be allowed to fearch every part of the country, the banks of the Nile, and the fands of Lybia. We may then be permitted to open the fmall pyramid of Djiza, the total demolition of which would not coft fifty thoufand livres (two thoufand pounds). It is probable too, that till that period, we muft remain ignorant of the fignification of the hieroglyphics; though, in my opinion, the means we at prefent poffefs might be fufficient to explain them.

But enough of conjectures. It is now time to proceed to the examination of another country, the ancient and modern ftate of which is not lefs interefting even than that of Egypt.

## EGYPT And SYRIA.

## STATE of SYRIA.

## C H A P. XX.

Geography and Natural Hilory of Syria.
Leaving Egypt by the Ifthmus which feparates Africa from Afia, and following the coaft of the Mediterranean, we enter a fecond province of Turkey, known to us by the nams of Syria. This name which, like fo many others, has been tranfmitted to us by the Greeks, is an abridgment of Adyria, which was firt adopted by the Ionians who frequented thofe coafts, after the Affyrians of Niniveh had reduced that country to be a province of their empire (a). The name of
(a) That is about the year 750 before Chrift. This is the reafon why Homer, who wrote a little before that time, no where ufes this name, though he fpeaks of the inhabitants of the country, but employs the oricutal word aram, changed into arimean and erembos,

Syria had not therefore fo extenfive a fignification as it has fince obtained. It comprehended neither Phœnicia nor Paleftine. The prefent inhabitants, who, according to the conftant practice of the Arabs, have not adopted the Greek names, are ignorant of the name of Syriu( $b$ ); inftead of which they call it Barr-el-Sbam (c), which fignifies country of the left; and is given to the whole fpace contained between two lines drawn, the one from Alexandretta to the Euphrates, and the other from Gaza in the defert of Arabia, bounded on the eaft by this defert, and on the weft by the Mediterranean. This name of country of the left, from its contraft with that of the Yamim, or country of the rigbt, indicates fome intermediate place as a common point, which muft be Mecca; and from its allufion to the worfhip of the fun (d)
proves
(b) Geographers, however, fonctimes write it Sourin, from the conftant change of the Gicek upfilon into the Arabic waw.
(c) El-gom alfo is the name of the city of Damafous, the reputed capital of Syria. I am at a lois to difoover why M. Savary has made it cl Shanns, or the City of the Sun.
(d) The ancient nations, who worliipped the funs paid their homage at the moment of his rifing; their faces

## EGYPT AND SYRIA. 289

proves at once, an origin anterior to Mahomet, and the exiftence, which is already certain, of this worhip, in the temple of the Caaba.

$$

$$

General appearance of the country.
If we examine a map of Syria, we may obferve that this country is in fome meafure only a chain of mountains, which diftribute themfelves in various directions from one leading branch; and fuch, in fact; is the appearance it prefents, whether we approach it from the fide of the fea, or by the immenfe plains of the defert. We firft difcover, at a great diftance, a clouded ridge, which runs north and fouth, as far as the fight extends; and, as we advance, diftinguifh the fummits of mountains, which, fometimes detached, and fometimes united in
faces were therefore turned towards the eaft. The north was on their left, the fouth on their right, and the weft behind them, called in the oriental languages, acheron and alaron.

290 TRAVELS IN
chains, uniformly terminate in one principal line which overtops them all; we may follow this line, without interruption, from its entry by the north, quite into Arabia. It firft runs clofe to the fea, between Alexandretta and the Orontes, and, after opening a paffage to that river, continues its courfe to the fouthward, quitting, for a mort diftance, the flore, and, in a chain of continued fummits, ftretches as far as the fources of the Jordan, where it feparates into two branches, to enclofe, as it were, in a bafon, this river and its three lakes. In its courfe, it detaches from this line, as from a main trunk, an infinity of ramifications, fome of which lofe themfelves in the defert, where they form various enclofed hollows, fuch as thofe of Damafcus and Hauran, while others advance toward the fea, where they frequently end in fteep declivities, as at Carmel, Nakoura, Cape Blanco, and in almoft the whole country between Bairout ( $e$ ) and Tripoli of Syria; but in general gently they terminate in plains, fuch as thofe of Antioch, Tripoli, Tyre, and Acre.
(c) The ancient Berytus.

## SECT. It.

Of the mointains.
Thefe mountains, as they vary their levels and fituations, are alfo greatly changed in their form and appearance. Between Alexandretta and the Orontes, the firs, larches, oaks, box-trees, laurels, yews, and myrtles, with which they abound, give them an air of livelinefs, which delights the traveller, wearied with the melancholy nakednes of the ille of Cyprus $(f)$. On fome declivities he even meets with cottages, environed with fig-trees, and vineyards; and the fight of thefe repays the fatigue he has endured on a road which, by rugged paths, leads him from the bottom of valleys to the tops of hills, and from the tops of hills to the bottoms of valleys. The inferior branches, which extend to the northward of Aleppo, on the contrary, prefent nothing but bare
(f) All veffels which go to Alexandretta touch at Cyprus, the fouthern part of which is a naked and defolate plain.
rocks, without verdure or earth. To the fouth of Antioch, and on the fea-coaft, the hill-fides are proper for the cultivation of tobacco, olives, and vines (g) ; but, on the fide of the defert, the fummits and declivities of this chain are almoft one continued feries of white rocks. Towards Lebanon, the mountains are lofty, but are covered, in many places, with as much earth as fits them for cultivation by induftry and labour. There, amid the crags of the rocks, may be feen the no very magnificent remains of the boafted cedars ( $b$ ); but a much greater number of firs, oaks, brambles, mulberrytrees, figs, and vines. As we leave the country of the Druzes, the mountains are no longer fo high, nor fo rugged, but become fitter for tillage. They rife again to the fouth-eaft of mount Carmel, are covered with woods, and afford very pleafant prof-
(g) Mount Cafius mult be excepted, which rifes above Antioch to a prodigious height. But Pliny furpaffes hyperbole, when he fays that, from its fummit, we may difcover at once both the morning's dawn and the evening twilight.
(b) There are now but four or five of thefe trees which deferve any notice.
pects; but as we advance toward Judea, they lofe their verdure, their valleys grow narrower, they become dry and ftoney, and terminate at the Dead Sea in a pile of defolate rocks, full of precipices and caverns (i); while to the weft of Jordan and the lake, another chain of rocks, ftill higher, and more rugged, prefents a ftill more gloomy profpect, and announces, afar off, the entrance of the defert, and the end of the habitable lands.

A view of the country will convince us that the moft elevated point of all Syria is Lebanon, on the fouth-eaft of Tripoli. Scarcely do we depart from Larneca, in Cyprus, which is thirty leagues diftance, before we difcover its fummit, capped with clouds. This is alfo diftinctly perceivable on the map, from the courfe of the rivers. The Orontes, which flows from the mountains of Damafcus, and lofes itfelf below Antioch; the Kafmia, which, from the north of Balbek, takes its courfe towards Tyre; the Jordan,
(i) This is the place called the Grottoes of Engaddi, which have been a refuge for vagabonds in all ages. Some of them are capable of containing fifteen hundred men.
forced by the declivities toward the fouth, prove that this is the higheft point. Next to Lebanon, the moft elevated part of the country is Mount Alskar, which becomes vifible as foon as we leave Marra in the defert. It appears like an enormous flattened cone, and is conftantly in view for two days journey. No one has yet had an opportunity to afcertain the height of thefe mountains by the barometer; but we may deduce it from another confideration. In winter their tops are entirely covered with fnow, from Alexandretta to Jerufalem; but after the month of March it melts, except on Mount Lebanon, where, however, it does not remain the whole year, unlefs in the higheft cavities, and toward the north-eaft, where it is meltered from the fea winds, and the action of the fun. In fuch a fituation I faw it fill remaining, in $17^{8} 4$, at the very time I was almoft fuffocated with heat in the valley of Balbek. Now, fince it is well known that fnow, in this latitude, requires an elevation of fifteen or fixteen hundred fathom, we may conclude that to be the height of Lebanon, and that it is confequently much
lower than the Alps, or even the Pyrenees ( $k$ ).

Lebanon, which gives its name to the whole extenfive chain of the Kefraouan, and the country of the Druzes, prefents us every where with majeftic mountains. At every ftep we meet with feenes in which nature difplays either beauty or grandeur, fometimes fingularity, but always variety. When we land on the coaft, the loftinefs and fteep afcent of this mountainous ridge, which feems to enclofe the country, thofe gigantic maffes which fhoot into the clouds, infpire aftonifhment and refpect. Should the curious traveller then climb thefe fummits which bounded his view, the immenfity of fpace which he difcovers becomes a fref fubject of admiration ; but completely to enjoy this majeftic fcene, he muft afcend the very point of Lebanon, or the Sannin. There, on every fide, he will view an horizon without bounds; while, in clear weather, the fight is loft over the defert, which extends to the Perfian
(k) Mount Blanc, the loftieft of the Alps, is eftimated at two thoufand four hundred fathom above the level of the fea; and the Peak of Offian, in the Pyrenees, at ninetoen hundred.

Gulph, and over the fea which bathes the coafts of Europe. He feems to command the whole world, while the wandering eye, now furveying the fucceffive chains of mountains, tranfports the imagination in an infant from Antioch to Jerufalem; and now approaching the furrounding objects, obferves the diftant profundity of the coalt, till the attention, at length, fixed by diftincter objects, more minutely examines the rocks, woods, torrents, hill-fides, villages, and towns; and the mind fecretly exults at the diminution of things, which before appeared fo great. The fpectator contemplates the valley obfcured by ftormy clouds, with a novel delight, and imiles at hearing the thunder, which had fo often burft over his head, growling under his feet; while the threatening fummits of the mountains are diminifhed till they appear only like the furrows of a ploughed field, or the fleps of an amphitheatre ; and the mind is flattered by an elevation above fo many great objects, on which pride makes it look down with a fecret fatisfaction.

When the traveller vifits the interior of there mountains, the ruggednefs of the roads,
roads, the ncepnefs of the defcents, the height of the precipices ftrike him at firft with terror; but the fagacity of his mule foon relieves him, and he examines at his eare thofe picturefque fcenes which fucceed each other to entertain him. There, as in the Alps, he travels whole days, to reach a place which is in fight at his departure ; he winds, he defcends, he fkirts the hills, he climbs; and in this perpetual change of pofition it feems as if fome magic power varied for him at every ftep the decorations of the fcenery. Sometimes he fees villages ready to glide from the rapid declivities on which they are built, and fo difpofed that the terraces of one row of houles ferve as a ftreet to the row above them. Sometimes he fees a convent ftanding on a folitary eminence, like Mar-Shaya, in the valley of the Tigris. Here is a rock perforated by a torrent, and become a natural arch, like that of Nahr-elLeben (1). There another rock, worn perpendicular, refembles a lofty wall. Frequent-
(l) The river of milk, which falls into Nahrel-Salib, called alfo the river of Bairout; this arch is upwards of one hundred and fixty feet long, eighty-five wide, and near two hundred high above the torrent.
ly on the fides of hills he fees beds of ftones ftripped and detached by the waters, rifing up like ruins difpofed by art. In many places, the waters, meeting with inclined beds, have undermined the intermediate earth, and formed caverns, as at Nahr-el-kelb, near Antoura: in others are formed fubterranean channels, through which flow rivulets for a part of the year, as at Mar-Elias-el-Roum, and Mar-Hanna (m); but thefe picturefque
(m) There fubterraneous rivulets are common throughout Syria; there are fome near Damafcus, at the fources of the Orontes, and at ibofe of Jordan. That of MarHanna, a Greek convent, near the village of Shouair, opens by a gulph called El-baloua, or the Swallower. It is an aperture of about ten feet wide, fituated at the bottom of a tunnel : at the depth of fifteen feet is a fort of firlt botton; but it only hides a very profound lateral opening. Some years ago it was fhut, as it had ferved to conccal a murder. The winter rains coming on, the waters collected, and formed a pretty deep lake; but fome fmall freams penetrating among the fones, they were foon ftripped of the earth which faftened them, and the preffure of the mafs of water prevailing on, the whole obftacle was removed with an explofion like thunder; and the re-action of the compreffed air was fo violent, that a column of water fpouted up, and fell upon a houfe at the diftance of at leaft two hundred paces. The current this occafioned formed a whirlpool, which fwal-
picturefque fituations fometimes become tragical. From thaws and earthquakes rocks have been known to lofe their equilibrium, roll down upon the adjacent houfes, and bury the inhabitants: fuch an accident happened about twenty years ago, and overwhelmed a whole village near Mar-djordjos, without leaving a fingle trace to difcover where it formerly ftood. Still more lately, and near the fame fpot, a whole hill fide, covered with mulberries and vines, was detached by a fudden thaw, and fliding on the declivity of the rock, was launched altogether, like a hip from the focks, into the valley. Hence arofe a whimfical, but reafonable, litigation, between the proprietor of the original ground and the owner of the emigrated land; the caufe was carried before the tribunal of the Emir Youfef, who indemnified both parties for their mutual loffes. It might be expected fuch accidents would difguft the inhabitants of thofe mountains; but befides that they are rare, they are compenfated by an advantage which makes them
lowed up the trees and vines planted in the tunnel, and thew them out by the fecond aperture.
prefer their habitations to the mof fertile plains, I mean the fecurity they enjoy from the oppreffions of the Turks. This fecurity is efteemed fo valuable a bleffing by the inhabitants, that they have difplayed an induftry on thefe rocks which we may elfewhere look for in vain. By dint of art and labour they have compeiled a rocky foil to become fertile. Sometimes, to profit by the water, they conduct it by a thoufand windings along the declivities, or fop it by forming dams in the valleys, while in other places, they prop up ground, ready to crumble away, by walls and terraces. Almolt all thefe mountains, thus laboured, prefent the appearance of a flight of ftairs, or an amphitheatre, each ftep of which is a row of vines or mulberry-trees. I have reckoned from a hundred to a hundred and twenty of thefe gradations on the fame declivity, from the bottom of the valley to the top of the eminence. While amid there mountains, I forgot I was in Turkcy, or, if I recollected it, only felt more fenfibly the powerful influence of even the feebleft ray of liberty.
S E C T. III.

Structure of the mointains.
If we examine the fubftance of thefe mountains, we fhall find they confift of a hard calcareous ftone, of a whitifh colour, fonorous like free-ftone, and difpofed in ftrata varioufly inclined. This ftone has almoft the fame appearance through the whole extent of Syria; fometimes it is bare, and looks like the peeled rocks on the coaft of Provence: fuch, for inftance, is the chain of hills on the north-fide of the road from Antioch to Aleppo, and which ferves as a bed to the upper part of the rivulet which paffes by the latter city. Near Ermenaz, a village fituated between Serkin and Kaftin, is a defile where they perfectly refemble thofe we pafs in going from Marfeilles to Toulon. In travelling from Aleppo to Hama, veins of the fame rock are continually to be met with in the plain, while the mountains on the right prefent huge piles, which look like the ruins of towns and caftles. The fame ftone, under a more regular form, likewife com-
pofes the greater part of Lebanon, Anti-Lebanon, the mountains of the Druzes, Galilee, and Mount Carmel, and fretches to the fouth of the Lake Afphaltites. The inhabitants every where build their houfes, and make lime with it. I have never feen, nor heard it faid, that thefe fones contained any petrified fhells in the upper regions of Lebanon; but we find, between Batroun and Djebail, in the Kefraouan, at a little diftance from the fea, a quarry of fchiftous ftones, the flakes of which bear the impreffions of plants, fifh, thells, and efpecially the fea onion. The bed of the torrent of Azkalan, in Paleftine, is alfo lined with a heavy ftone, porous and falt, which contains a great number of fmall volutes and bivalves of the Mediterranean. Pocock found a large quantity of them in the rocks which border on the Dead Sea. Iron is the only mineral which abounds here ; the mountains of the Kefraouan, and of the Druzes, are full of it. Every fummer the inhabitants work thofe mines, which are fimply ochreous. Judea cannot be without it, fince Mofes obferved, above three thous fand years ago, that its ftones were of iron. There is a vaguc report, that there was anciently
ciently a copper mine near Aleppo, but it muft have been long fince abandoned: I have been told likewife among the Druzes, that in the declivity of the hill I have mentioned, a mineral was difcovered which produced both lead and filver; but as fuch a difcovery would have ruined the whole diftrict, by attracting the attention of the Turks, they made hafte to deftroy every veftige of it.
S e c т. IV.

Volcanos and cartbquakes.
The fouth of Syria, that is, the hollow through which the Jordan flows, is a country of volcanos; the bituminous and fulphureous fources of the Lake Afphaltites, the lava, the pumice-ftones thrown upon its banks, and the hot bath of Tabaria, demonftrate that this valley has been the feat of a fubterraneous fire which is not yet extinguifhed. Clouds of fmoke are often obferved to iffue from the lake, and new crevices to be formed upon its banks. If conjectures in fuch cafes were not too liable to error, we might fufpect
pect that the whole valley has been formed only by a violent finking of a country which formerly poured the Jordan into the Mediterranean. It appears certain, at leaft, that the cataftrophe of five cities, deffroyed by fire, muft have been occafioned by the cruption of a volcano, then burning. Strabo exprefsly fays (a), " that the traditi" on of the inhabitants of the country, " (that is, of the Jews themfelves), was, " that formerly the valley of the Lake was " peopled by thirteen flourihing cities, " and that they were fwallowed up by a "volcano." This account feems to be confirmed by the quantities of ruins fill found by travellers on the weftern border. Thefe eruptions have ceafed long fince, but earthquakes, which ufually fucceed them, ftill continue to be felt at intervals in this country. The coaft in general is fubject to them, and hiftory gives us many examples of earthquakes, which have changed the face of Antioch, Laodicea, Tripoli, Berytus, Tyre, Sidon, \&c. In our time, in the year 1759, there happened one which caufed the greateft

$$
\text { (i) Lib. 16, p. } 764 \cdot
$$

ravages. It is faid to have deftroyed, in the valley of Balbek, upwards of twenty thoufand perfons, a lofs which has never been repaired. For three moriths, the fhocks of it terrified the inhabitants of Lebanon fo much as to make them abandon their houfes, anddwell under tents. Very lately (the 14 th of December, 1783 ,) when I was at Aleppo, fo violent a hock was felt, as to ring the bell in the houfe of the French Conful. -It is remarked in Syria, that earthquakes feldom happen but in winter, after the autumnal rains; and this obfervation, conformable to that made by Doctor Shaw in Barbary, feems to prove that the action of water on the dried earth has fome thare in thefe convulfive motions. It may not be improper to remark, that the whole of Afia Minor is fubject to them in like manner.

$$
\begin{aligned}
& \text { S е с т. V. } \\
& \text { Of the Locufts. }
\end{aligned}
$$

Syria, as well as Egypt, Perfia, and almoft all the fouth of Afia, is fubject to Vol. I. X another
another calamity no lefs dreadful, I mean thofe clouds of locufts, fo often mentioned by travellers. The quantity of thefe infects is incredible to all who have not themfelves witneffed their aftonihing numbers; the whole earth is covered with them for the fpace of feveral leagues. The noife they make in browzing on the trees and herbage, may be heard at a great diftance, and refembles that of an army foraging in fecret. The Tartars themfelves are a lefs deftructive enemy than thefe little animals; one would imagine, that fire had followed their progrefs. Wherever their myriads fpread, the verdure of the country difappears, as if a curtain had been removed; trees and plants, ftripped of their leaves, and reduced to their naked boughs and ftems, caufe the dreary jmage of winter to fucceed in an inftant, to the rich fcenery of the fpring. When thefe clouds of locufts take their flight, to furmount any obftacle, or to traverfe more rapidly a defert foil, the heavens may literally be faid to be obfcured with them. Happily this calamity is not frequently repeated, for it is the inevitable forerunner of famine, and the maladies it occafions. The inhabitants of Syria have remarked, that
locufts are always bred by too mild winters, and that they conftantly come from the defert of Arabia. From this obfervation, it is eafy to conceive that, the cold not having been rigorous enough to deftroy their eggs, they multiply fuddenly; and, the herbage failing them in the immenfe plains of the defert, innumerable legions iffue forth. When they make their firft appearance on the frontiers of the cultivated country, the inhabitants ftrive to drive them off, by raifing large clouds of fmoke, but frequently their herbs and wet ftraw fail them; they then dig trenches, where numbers of them are buried; but the two moft efficacious deftroyers of thefe infects, are the fouth and fouth-eafterly winds, and the bird called the fanarmar. Thefe birds, which greatly refemble the woodpecker, follow them in numerous flocks, like farlings, and not only greedily devour them, but kill as many as they can; accordingly, they are refpected by the peafants, and nobody is ever allowed to fhoot them. As for the foutherly and fouth-eafterly winds, they drive with violence thefe clouds of locufts over the Mediterranean, where fuch quantitics of them are drowned that, when
their carcafes are thrown on the fhore, they infect the air for feveral days, even to a great diftance.

We may reafonably prefume, that in fo extenfive a country as Syria, the quality of the foil is not every where the fame. In general the land of the mountains is rude; that of the plains fat and loamy, and exhibits every fign of the greateft fecundity. In the territory of Aleppo, towards Antioch, it refembles very fine brick-duft, or Spanifh Snuff. The waters of the Orontes, however, which traverfes this diftrict, are tinged with white, which proceeds from the nature of the lands towards its fource. Almoft every where elfe the earth is brown, and like fine garden mold. In the plains, fuch as thofe of Hauran, Gaza, and Balbek, it is often difficult even to find a pebble. The winter rains occafion deep quagmires, and on the return of fummer, the heat produces, as in Egypt, large cracks in the earth feveral feet deep.

## S ect. VI.

## Of the Rivers and Lakes.

The exaggerated, or, if you will, the grand ideas which hiftory and travellers ufually give us of diftant objects, have accuftomed us to fpeak of the waters of Syria with a refpect which amufes our imagination. We are fond of faying the river Fordan, the river Orontes, the river Adonis. If, however, we wifh to preferve to words their proper fignification, we fhall hardly find in this country any other than rivulets. The channels of the Orontes and the Jordan, the two moft confiderable, are fcarcely fixty paces wide at their mouths ( 0 ); the others do not merit to be mentioned. If the rains and melted fnow give them fome importance in the winter, their courfe is only to be difcovered, during the remainder of the year, by the round ftones and fragments of rocks with which their beds
(0) The Jordan, it muft be owned, has confiderable depth, but if the Orontes were not impeded by repeated obitacles, it would be quite dry during the fummer.
are filled. They are nothing but torrents and cafcades; and it may be conceived that, from the proximity of the mountains, among which they rife, to the fea, their waters have not time to collect in long vaileys, fo as to form rivers. The obftacles oppofed by there mountains, in feveral places, at their iffue, have formed confiderable lakes, fuch as thofe of Antioch, Aleppo, Damafcus, Houla, Tabaria, and that which is honoured with the name of the Dead Sea, or Lake Afphaltites. All thefe lakes, except the laft, are of frefh water, and contain feveral fpecies of filh, different from ( $p$ ) thofe we are acquainted with.

Lake Afphaltites, alone, contains neither animal nor vegetable life. We fee no verdure on its banks, nor are fifh to be found within its waters; but it is not true that its exhalations are peftiferous, fo as to deftroy birds flying over it. It is very common to
( $\dagger$ ) The lake of Antioch abounds particularly with eels, and a fort of red fill of an indifferent quality. The Greeks, who kcep a perpetual Lent, confume great quantities of them. Lake Tabaria is ftill richer; crabs, efpecially, are very numerous, but, as its environs are inhapited only by Mahometans, it is but little finfed.
fee fwallows flkimming its furface, and dipping for the water neceffary to build their nefts. The real caufe which deprives it of vegetables and animals is the extreme faltnefs of the water, which is infinitely ftronger than that of the fea. The foil around it, equally impregnated with this falt, produces no plants, and the air itfelf, which becomes loaded with it from evaporation, and which receives alfo the fulphureous and bituminous vapours, cannot be favourable to vegetation : hence the deadly afpect which reigns around this lake. In other refpects, the ground about it, however, is not marflyy, and its waters are limpid and incorruptible, as murt be the cafe with a diffolution of falt. The origin of this mineral is eafy to be difcovered; for on the fouth-weft fhore, are mines of foffil falt, of which I have brought away feveral fpecimens. They are fituated in the fide of the mountains which exte:d along that border, and, for time immemorial, have fupplied the neighbouring Arabs, and even the city of Jerufalem. We find alfo on this fhore fragments of fulphur and bitumen, which the Arabs convert into a trifing article of commerce ; as alfo hot fountains, and deep

$$
X 4
$$

crevices, which are difcovered at a diftance, by little pyramids built on the brink of them. We likewife find a fort of ftone, which, on rubbing, emits a noxious finell, burns like bitumen, receives a polifh like white alabalter, and is ufed for the paving of courtyards. At intervals, we alfo meet with unfhapen blocks, which prejudiced eyes miftake for mutilated fatues, and which pafs with ignorant and fuperftitious pilgrims, for monuments of the adventure of Lot's ziife, though it is no where faid the was metamorphofed into ftone, like Niobe, but into falt, which muf have melted the enfuing winter.

Some naturalifts have been greatly embarrafled to find a difcharge for the waters which the Jordan is continually pouring into the lake, and have therefore been inclined to fufpect it had a communication with the Mediterranean; but, befides that we know of no gulph to corroborate this fuppofition, it has been demonftrated, by accurate calculations, that evaporation is more than fufficient to carry off the waters brought by the river. It is, in fact, very confiderable, and frequently becomes fenfible
fible to the eye, by the fogs with which the lake is covered, at the rifing of the fun, and which are afterwards difperfed by the heat.

## Sect. VII.

Of the Climate.
It is an opinion pretty generally received, that Syria is a very hot country; but it will be neceffary to make feveral diftinctions: firft, on account of the difference of latitude, which, from one extremity to the other, is not lefs than fix degrees: fecondly, from the natural divifion of the country into low and flat, and high and mountainous, which divifion occafions a till more fenfible difference; for while Reaumur's thermometer ftands at twenty-five and twenty-fix degrees upon the coaft, it hardly rifes to twenty or twenty-one among the mountains ( $q$ ). In
(q) Along the coaft of Syria, and at Tripoli, in particular, the loweft degrees to which the thermometer falls in winter, are eight and nine degrees above the freezing point; in fummer, in clofe apartments, it rifes from $25^{\frac{8}{2}}$ to $26^{\circ}$. As for the barometer, it is remarkable that at the latter end of May, it fixes at 28 inches, and never varies till OEtober.

winter,

winter, therefore, the whole chain of mountains is covered with fnow, while the lower country is always free from it, or at leaft it lies only for an inftant. We muft firft then eftablifn two general climates; the one very hot, which is that of the coaft, and the interior plains, fuch as thofe of Balbek, Antioch, Tripoli, Acre, Gaza, Hauran, \&cc. the other temperate, and almoft like our own, which is the climate of the mountains, at leaft at a certain height. The fummer of I784 was reckoned, among the Druzes, one of the hotteft they remembered, yet I never found the heat to be compared to that I had felt at Saide or Bairout.

In this climate, the order of the feafons is nearly the fame as in the middle provinces of France ; the winter, which lafts from November to March, is Marp and rigorous. Not a year pafies without fnow, and the earth is frequently covered feveral feet deep with it for months together; the fpring and autumn are mild, and the fummer heat is abfolutely infupportable. In the plains, on the contrary, as foon as the fun returns to the equator, the tranfition is rapid to oppreffive heats, which continue to the end of October. But then
the winter is fo moderate, that the orange, date, banana, and other delicate trees, flourifh in the open air ; and it appears equally extraordinary and picturefque to an European at Tripoli, to behold, under his windows, in the month of January, orange-trees loaded with flowers and fruit, while the lofty head of Lebanon is covered with ice and fnow. It muft neverthelefs be obferved that, in the northern parts, and to the eaft of the mountains, the winter is more rigorous, without the fummer being lefs hot. At Antioch, Aleppo, and Damafcus, there are feveral weeks of froft and fnow every winter; which arifes from the fituation of the country ftill more than the difference of latitude. For, in fact, all the plain to the eaft of the mountains is very high above the level of the fea, expofed to all the parching winds of the north and north-eaft, and fcreened from the humid winds of the fouth and fouthweft. Befides, Antioch and Aleppo receive from the mountains of Alexandretta, which are within fight, an air which the fnow, that covers them fo long, muft neceffarily render very fharp.
Syria,

Syria, therefore, unites different climates under the fame fky , and collects, within a narrow compafs, pleafures and productions which nature has elfewhere difperfed at great diftances of times and places. With us, for inftance, feafons are feparated by months; there we may fay they are only feparated by hours. If in Saide or Tripoli, we are incommoded by the heats of July, is fix hours we are in the neighbouring mountains, in the temperature of March; or, on the other hand, if chilled by the frofts of Decembci, at Befharrai, a day's, journey brings us back to the coaft, amid the flowers of May ( $r$ ). The Arabian poets have therefore faid, that " the "Sannin bears winter on his head, fpring "upon his fhoulders, and autumn in his " bofom, while fummer lies fleeping at his " feet." I have myfelf experienced the truth of this figurative obfervation, during the eight months I refided at the monaftery of MarHanna (s), feven leagues from Bairout. At the
(r) This is the practice of feveral of the inhabitants of this diftrict, who pafs the winter near Tripoli, while their houfes are buried under the fnow.
(s) Mar-Hanna el Shouair ; i. e. St. John, near the village of Shouair. This monaftery is fituated in a ftony valley,
the end of February, I left at Tripoli a variety of vegetables which were in perfection, and many flowers in full bloom.' On my arrival at Antoura ( $t$ ), I found the plants only beginning to fhoot; and, at Mar-Hanna, every thing was covered with fnow. It had not entirely left the Sannin till the end of April, and, already, in the valley it overlooks, rofes had begun to bud. The early figs were pait at Bairout, when they were firft gathered with us, and the filk-worms were in cod, before our mulberry-trees were half ftripped.

To this advantage, which perpetuates enjoyments by their fucceffion, Syria adds another, that of multiplying them by the variety of her productions. Were nature affifted by art, thofe of the moft diftant countries might be produced within the fpace of twenty leagues. At prefent, in fpite of the barbarifm of a government which is an enemy to all induftry and improvement, we are afto-
valley, which joins to that of NJabr el Kelb, or Torrent of the Dog: The religious are Greek Catholics, of the order of Saint Bafil: I fhall have oscafion to fpeak of it more amply.
(t) A houfe formerly belonging to the Jefuits, but oceupied at prefent by the Lazarifts.
nifhed at the variety this province affordss Befides wheat, rye, barley, beans, and the cotton plant, which is cultivated every where, we find a multitude of ufeful and agreeable productions, appropriated to different fituations. Paleftine abounds in fefamum, from which oil is procured, and doura ( $u$ ) as good as that of Egypt ( $x$ ). Maize thrives in the light foil of Balbek, and even rice is cultivated, with fuccefs, on the borders of the marfhy country of Havula. They have lately begun to plant fugar-canes in the gardens of Saide and of Bairout, and they find them equal thofe of the Delta. Indigo grows without cultivating, on the banks of the Jordan, in the country of Bifan, and only requires care to make it of an excellent quality. The hill-fides of Latakia produce tobacco, which is the principal article of its commerce with Damietta and Cairo. This is now cultivated throughout all the mountains. As for trees, the olive-tree of Provence
(u) A fort of pulfe, fomething like lentils, which grows in clufters, on a ftalk fix or feven feet high. It is the bolcus arundinaceus of Linnæus.
(x) I never faw any buck-wheat in Syria, and oats are very rare. Rye and ftraw are given to the horfes.
grows at Antioch, and at Ramla, to the height of the beech. The white mulberrytree conflitutes the wealth of the whole country of the Druzes, by the beautiful filks which are produced on it, while the vine, fupported on poles, or winding round the oaks, fupplies grapes which afford red and white wines that might rival thofe of Bordeaux. Before the ravages occafioned by the late troubles, there were, in the gardens of Yaffa, two plants of the Indian cotton-tree, which grew rapidly, nor has this town loft its lemons, its enormous citrons ( $y$, or its wa-ter-melons, which are preferable even to thofe of Broulos $(z)$. Gaza produces dates like Mecca, and pomegranates like Algiers; Tripoli affords oranges equal to thofe of Malta; Bairout figs like thofe of Marfeilles, and bananas not inferior to thofe of St. Domingo ; Aleppo enjoys the exclufive advantage of producing piftachios; and Damafcus jufly boafts of pofieffing all the fruits known in our provinces. Its fony foil fuits equally the ap-
(y) I have feen fome which weighed eighteen pounds.
(z) Broulos on the coaft of Egypt, produces better water-mellons than are found in the reft of the Delta, where the fruits in general are too watery.
ples of Normandy, the plumbs of Touraine, and the peaches of Paris. Twenty forts of apricots are reckoned there, the ftone of one of which contains a kernel highly valued through all Turkey. In fhort, the cochineal plant, which grows on all that coaft, contains, perhaps, that precious infect in as high perfection as it is found in Mexico and St. Domingo (a) ; and if we confider that the mountains of the Yemen, which produce fuch excellent coffee, are only a continuation of thofe of Syria, and that their foil and climate are almoft the fame (b), we fhall be induced to believe that Judea, efpecially, might eafily cultivate this valuable production of Arabia. With thefe numerous advantages of climate and of foil, it is not aftonifhing that Syria fhould
(a) It was long imagined that the infect of the cochineal was peculiar to Mexico; and the Spaniards, to fecure the exclufive peffeffion of it, have prohibited the exportation of the living cochincal, under pain of death; but M . Thierri, who fucceeded in bringing it away, in 1771 , and carried it to Saint Domingo, found the nopals of that iffand contained it before his arrival. It feems as if nature fcarcely ever feparated infechs from the plants appropriated to them.
(b) The fituation of the country of Yemen and Tahama is very fimilar to that of Syria. 'Sce M. Nicbuhr Voyage on Arabic.
always
always have been efteemed a moft delicious country, and that the Greeks and Romans ranked it among the moft beautiful of their provinces, and even thought it not inferior to Egypt. In more modern times, alfo, a Pacha, who was acquainted with both thefe provinces, being afked to which he gave the preference, replied, "Egypt, without doubt, " is a moft beautiful farm, but Syria is a "charming country-houfe" (c).

SECT.
(c) To complete the Natural Hiftory of Syria, it is proper to add that it produces all our domeftic animals, and, befides them, the buffalo and the camel, whofe utility is fo well known. We allo find gazelles (antelopes) in the plains, which fupply the place of our roebucks; in the mountains are numbers of wild-boars, not fo large nor fo fierce as ours. The ftag and the deer are unknown there; the wolf and the real fox are very fare; but there is a prodigious quantity of the middle fpecies, named Shacal (jackall) which in Syria is called zuauwee, in imitation of its howl ; and in Egypt dib, or wolf. Thefe jackalls go in droves, and frequent the environs of the towns, where they feed on what carrion they can find. They never attack any body, but are always ready to fave themfelves by flight. Every evening they feem to give each other the watch-word, to begin howling, and their cries, which are very doleful, fometimes laft a quarter of an hour. In unfrequented paces there are alfo hyenas, in Arabic named $d a b a$, and ounces, imYaz.I. Y

## S E C T. VIII.

## Qualities of the Air.

1 muft not forget to fpeak of the qualities of the air and waters. Thefe elements prefent in Syria very remarkable phænomena. On the mountains, and in all the elevated plain which fretches to the eaftward, the air is light, pure and dry ; while on the coaft, and efpecially from Alexandretta to Yafa, it is
properly called tygers (in Arabic nema). Lebanon, the country of the Druzes, Nablous, Mount Carmel, and the environs of Alexandretta, are their principal haunts. But, in return, the country is exempt from lions and bears. Water fowl are very plentiful; land game is not fo aboudant, except in particular diftricts. The hare and the large red partridge are the moft common; rabbits, if there are any, are extremely fcarce. The francolin, or attagen, is more numerous at Tripoli, and in the neighbourhood of Yafa. Nor ought we to omit obfcrving that a lpecies of the colibri (or humming-bird) ftill exifts in the territory of Saide. ${ }^{\text {M }}$. J. B. Adanfon, formeriy interpreter in that city, who cultivates natural hifory with equal tafte and fuccefs, met with one, which he made a prefent of to his brother the Academician. This, and the pelican are the only remarkable birds in Sjic.a.
moift and heavy; thus Syria is divided lengthways into two different difricts, feparated by the chain of mountains which alfo caufe their diverfity; for thefe preventing, by their height, the free paffage of the wefterly winds, force the vapours which they bring from the fea to collect in the valleys; and as air is light only in proportion to its purity, thefe are unable to rife above the fummits of this rampart. The confequence is, that the air of the defert and the mountains, though fufficiently wholefome for fuch as are in no danger of pulmonary complaints, is hurtful to thofe who are, and it is neceffary to fend fuch from Aleppo to Latakia or Saide. This good property of the air on the coaft is, however, outweighed by more ferious bad ones, and it may in general be pronounced unhealthy, as it caufes intermittent and putrid fevers, and thofe defluxions of the eyes, of which I have fpoken in treating of Egypt. The evening dews, and fleeping on the terraces, are found much lefs hurtful in the mountainous and interior parts of the country, as the diftance from the fea is greater, which confirms what I have already obferved upon that fubject.

$$
\mathrm{Y} 2 \quad \mathrm{SECT} .
$$

SECT. IX.

## Qualities of the Waters.

The waters of this country have alfo a remarkable difference. In the mouitains, that of the fprings is light, and of a very good quality; but in the plain, whether to the eaft or weft, if it has no natural or artificial communication with the fprings, we find nothing but brackin water, which becomes fill more fo the nearer we approach the defert, where there is not a drop of any other. This inconvenience has rendered rain fo precious to the inhabitants of the frontiers, that they have in all ages taken care to collect it in wells and caverns carcfully clofed : hence, among all ruins, cifterns are the firft things we difcover.

The face of the heavens, in Syria, particularly on the coaft, and in the defert, is in general more confant and. regular than in our climates; rarely is the fun oblcured for two fucceffive days. In the courfe of a whole fumme: we fee few clouds, and fill lefs rain; which only begins about the end of OEfober,
EGYPT AND SYRIA.

October, and then is neither long nor plentiful. The hufbandmen wifh for it to fow what they call their reinter crop, that is, their wheat and barley (d). In December and January, the rain becomes more frequent and heavier, and fnow often falls in the higher country. It fometimes rains alfo in March and April; and the hufbandman avails himfelf of it to fow his fummer crop of fefamum, doura, tobacco, cotton, beans, and water-melons. The remainder of the year is uniform, and drought is more frequently complained of than too much wet.
(d) The feed-time of the winter crop, called Shetawia, takes place, throughout Syria, only at the time of the autumnal rains, or toward the end of OCtober. The time of reaping this crop varies according to the difference of fituation. In Paleftine, and in the Hauran, they reap their wheat and barley from the end of April through the whole month of May. But as we advance toward the north, or afcend the mountains, the harveft does not begin till June and July.

The feed-time of the fummer crop, or Saifia, begins with the fpring rains, that is, in March and April ; and their harveft is in the months of September and OCtober.

The time of vintage, in the mountains, is about the end of September; the fill-worms hatch there in April and May, and begin to fpin in July.

$$
\text { Y } 3 \quad \text { SECT. }
$$

SECT. X.
Of the Winds.

The winds in Syria, as in Egypt, are in fome degree periodical, and governed by the feafons. About the autumnal equinox, the north-weft wind begins to blow more frequently and ftronger. It renders the air dry, clear, and fharp; and it is remarkable that, on the fea-coaft, it caufes the head-ach, like the north-eaft wind in Egypt ; and this more in the northern than in the fouthern parts, but never in the mountains. We may further remark, that it ufually blows three days fucceflively, like the fouth and foutheaft at the other equinox. It continues to prevail till November, that is, about fifty days, and its variations are generally toward the eaf. Thefe winds are followed by the north-weft, the weft, and fouth-weft, which prevail from November to February. The two latter are, to ufe the expreffion of the Arabs, the fatbers of the rains. In March arife the pernicious winds from the fouthern quarter, with the fame circumftances as in

Egypt;

Egypt; but they become feebler as we advance toward the north, and are much more fupportable in the mountains than in the flat country. Their duration, at each return, is ufually of four-and-twenty hours, or three days. The eafterly winds, which follow, continue till June, when a north wind fucceeds, with which veffels may go and return along all the coaft. At the fame feafon too, the wind varies through all the points, every day, pafling with the fun from the eaft to the fouth, and from the fouth to the weft, to return by the north, and recommence the fame circuit. At this time alfo a local wind, called the land-breeze, prevails along the coaft, during the night; it fprings up after, fun-fet, lafts till fun-rifing, and reaches only two or three leagues out at fea.

The caufes of all thefe phænomena are problems well deferving the attention of natural philofophers. No country is better adapted to obfervations of this kind than Syria. It feems as if nature had there prepared whatever is neceffary to the ftudy of her operations. We, in our foggy climates, in the depth of vaft continents, a, unable to purfue the great changes which happen in
Y4
the
the atmofphere: the confined horizon which bounds our view, circumfcribes alfo our ideas. The field of our obfervation is very limited; and a thoufand circumftances combine to vary the effects of natural caufes. There, on the contrary, an immenfe fcene opens before us, and the great agents of nature are collected in a fpace which renders it eafy to watch their various operations. To the weft is the valt liquid plain of the Mediterranean; to the eaft the plain of the defert, no lefs vaft, but abfolutely dry; in the midtt of thefe two level furfaces, rife the mountains, whofe fummits are fo many obfervatories, from whence the fight may difcern full thirty leagues. Four obfervers might command the whole extent of Syria; and from the tops of Cafius, Lebanon, and Tabor, let nothing efcape them within that boundle's horizon. They might obferve how the region of the fea, at firft unclouded, veils itfelf with vajours; in what manner thefe vapours form into groupes, and feparate, and by a conftant mechanifm, afcend and rife above the mountains; while, on the other hand, the defert, invariably clear, never produces clouds, and has only thofe it has
received from the fea. They might reply to the queftion of M. Michaelis (e), "Whether the defert produces dews?" that the defert, containing no water, except in winter, after the rains, can only furnifh vapours at that period. On viewing the valley of Balbeck, burnt up with heat, whilft the head of Lebanon is hoary with ice and fnow, they would be fenfible of the truth of an axiom, which ought no longer to be difputed, that the beat is greater in proportion as we approach the furface of the carth, and diminibes as ree remove from it; fo that it feems to proced only from the action of the rays of the fun upon the earth. In fhort, they might fuccefsfully attempt the folution of the greateft part of meteorological problems.
(e) See the quefions propofed by M. Michaelis to the travellers for the king of Denmark.

## C H A P. XXI.

Obfervations on the winds, clouds, rains, fogs, and tbunder.

UNTIL this fhall be undertaken by perfons capable of undertaking fuch experiments, and making them with all the accuracy fo important a difcuffion merits, I fhall fubmit, in a few words, fome general ideas fuggefted by my own obfervations. I have already mentioned the relation there is between the winds and the feafons; and have hinted that the fun, from the connection between his annual progrefs, and their varieties, appears to be the principal agent. His action on the atmofphere which furrounds our globe, feems to be the primary caufe of all the various motions in the upper regions of the air. To conceive clearly how this is cffected, we murt trace back theie ideas to their origin, and confider the properties of the element put in action.

Firf, the air, we know, is a fluid, all the particles of which, naturally equal and moveable,
EGYPT AND SYRIA.
able, tend, like water, invariably to a level; fo that if we fuppofe a chamber fix feet fquare, every way, the air introduced into it will fill it equally. Secondly, another property of air is to be capable of dilatation or compreffion; that is, the fame quantity of it may occupy a greater or a lefs fpace. Thus, in the cafe of the chamber, were we to draw off two thirds of the air it contains, the remainder would replace it by expanfion, and ftill continue to fill its whole capacity ; if inftead of drawing off the air, the quantity of it be doubled or tripled, the chamber will equally contain it; which is not the cafe with water.

This property of expanfion is more efpecially called into action by the prefence of fire ; and as then the heated air contains in an equal fpace fewer particles than cold air, it becomes lighter, and rifes. If, for example, in the fuppofed chamber, you introduce a grate full of fire, the air affected by it will rife infantly to the ceiling, and that which was near it will take its place. When this air is heated it will follow the firft, and a conftant current upwards, fupplied by the influx
influx of the lateral air, be produced (a); fo that the hottef air will diffufe itfelf in the upper part of the room, and the lefs heated in the lower, each of them continuing to feek an equilibrium, agreeable to the general laws of fluidity (b).

Let us now apply there obfervations to what pafies in the elements, on a larger fcale, and we thall find they explain the greater part of the planomena of the winds.

The atmorphere which furrounds the eatth may be confidered as an ocean formed by a peculiar fluid, the bottom of which we occupy, and whofe furface is at an unknown height. From its primary law, that is, from its fluidity, this ocean has a conftant tendency to an equilibrium, and to remain fragnant; but the fun, calling into action the law of expanfion, excites an agitation in it which keeps all its component parts in a ttate of perpetual fluctuation. His rays, applied
(a) This is the mechanifin of chimneys and fovebaths.
(b) There is befides this a continual effort of the rarefied air againft the obftacles by which it is confined; but this is of no confequence in the prefent cafe.
to the furface of the earth, have precifely the fame effect as the fire in the fuppofed chamber; they produce a degree of heat which dilates the contiguous air, and caules it to rife towards the upper region. Were this heat equal throughout, the general procefs would be uniform; but it varies from an infinity of circumftances, which become the efficient caufes of the varieties we continually oblerve.

Firf, it is certain that the earth is haated in proportion as it is expofed to the perpendicular rays of the fun. The heat is nothing at the poles, but exceffive under the line. For this reafon our climates are colder in winter and hotter in fummer; and for the fame reafon, likewife, the temperature may be very different in the fame place, and under the fame latitude, according as the country, inclining towards the north or fouth, prefents its furface more or lefs obliquely to the folar rays (c).
(c) This is the reafon why, as Montefquieu has well obferved, Tartary, which is under the fame parallel as France and England, is infinitely colder than thefe countries.

Secondly,

Secondly, it is equally true that the furface of the water is lefs retentive of heat than that of the earth: the air over the fea, lakes, and rivers, therefore, will be lefs hot than that over the land in the fame latitude; humidity is every where a principle of coolnefs, and hence a country covered with forefts, and abounding in moraffes, is colder than when thofe marfhy grounds are diained, and the forefts felled (d).

A third confideration, not lefs important, is, that the heat diminifhes as we rife above the general plane of the earth. This is demonflated by the obfervation, that the fummits of high mountains, even under the line, are covered with eternal fnows, and demonfrate the conftant coldnefs of the upper region of the air.

If we now confider the combined effects of thefe different circumftances, we thall find they account for the greateft part of the phrnomena we are attempting to explain.

Firft, the air of the polar regions being colder and more denfe than that of the coun-
(d) This explains why ancient Gaul was much colder than modern France.
tries near the equinoctial, its endeavour to preferve an equilibrium, inceffantly forces it from the poles towards the equator. And this reafoning is fupported by facts, fince the uniform obfervation of all navigators proves that the winds mof common in both hemifpheres proceed from that quarter of the horizon of which the pole occupies the center; that is to fay, from between the northweft and north-eaft. What paffes on the Mediterranean; in particular, is perfectly analogous to this remark.

I have oblerved, in fpeaking of Egypt, that the northerly winds are moft frequent in that fea, where they prevail nine months out of twelve. A very plaufible folution of this phrnomenon may be given from the confideration that, the coant of Barbary, Atruck powerfully by the rays of the fun, heats the furrounding air, the rarefaction of which caufes it to rife, and pafs into the interior part of the country, while that of the fea, meeting with lefs refiftance on that fide, immediately rumes into its place ; but being itfelf heated, follows the former current, till, by degrees, the Mediterranean lofes a great quantity of air. By this procefs, the air which covers
Europe,

Europe, having no longer any fupport, diffufes itfelf on that fide; and thus a general current is eftablifhed. This will be the ftronger, in proportion as the air of the north is colder ; and hence the greater impetuofity of the winds in winter than in fummer; and it will be more feeble as the air of the different countries approaches nearer to an equilibrium; and hence thefe winds are more moderate in the fine feafon, and in July and Auguft terminate in a fort of general calm, becaufe the fun then heats almoft equally the whole hemifphere, even to the pole. The uniform and conftant courfe that the north-weft wind takes in June, is occafioned by the fun, which, advancing as far as the parallel of Afouan, which is almoft that of the Canaries, occalions, behind mount Atlas, a conftant and regular wind. The periodical return of the eafterly winds, at the time of each equinox, has alfo doubtlefs a geographical reafon; but, in order to difcover this, it would be neceffary to have a general table of what pafies in other parts of the continent; and here, I confefs, my fyftem feems to fail me. I am ignorant, likewife, of the caufe of that conflant duration
of three days, which the foutherly and northerly winds affect to obferve, whencver they blow at the time of the equinoxes.

Varieties are fometimes obfervable in the fame wind, which arife from the nature of the country. Thus, if a wind meets with a valley, it follows that direction, like the currents of the fea. And hence, doubtlefs, it happens, that in the Adriatic Gulph fcarce any but north-weft and fouth-eafterly winds are known; fuch being the direction of this arm of the fea. From a fimilar caufe, the wind in the Red.fea blows contantly from the north or fouth; and the frequency of the north-weft, or Miftral, in Provence, muft arife from the currents of air, occafioned by the Cevennes and the Alps, and which are forced to follow the direction of the valley of the Rhone.

But what becomes of the air thus attracted by the coaft of Africa and the torrid zone? This may be difpofed of in two different ways.

Firf, the air, arrived under thefe latitudes, forms there a great current, known by the name of the Eaftern Trade-wind, which Vol. 1. 7 extends,
extends, as is well known, from the Canaries to America (e), which, when it has reached, it feems to be broken by the mountains of the continent : and thus diverted from its original direction, it returns in an oppofite one, whence that wefterly wind which prevails under the parallel of Canada, and which, by this means, repairs the loffes of the polar regions.

Secondly, The air which rufhes from the Mediterranean upon Africa, rarefied there by the heat, rifes into the fuperior region; but as it cools at a certain height, the fpace it occupies
(c) Dr. Franklin has theught, that the caufe of the Eaftern Trade-wind has a connection with the diurna! motion of the earth; but were it fo, why is not this wind perpetual? Befides, how fhall we explain, on this hypothefis, the two Moafoons of India, the fhiftings of which conftantly follow the paffage of the fun over the equinotial line; that is, the wefterly and foutherly winds prevail during the fix months the fun is in the northern figns; and the eafterly and northeily winds, during the fix months he is in the fouthern. Does not this prove, that all the varicties of the winds depend folely on the action of the fun upon the atmofphere? The moon too, which has fo great an effect upon the ocean, may alfo produce fome on the winds; but the influcnce of the other planets feems a chimara fuited oaly to the antrology of the ancients.
is infinitely reduced by condenfation. It may be alleged, that having recovered its weight, it thould defeend; but befides that, on returning towards the earth, it becomes again heated, and confequently expands, it experiences a powerful and continued effort of the inferior air which fupports it. Thefe two frata, of the fuperior air refrigerated, and the inferior air dilated, maintain a perpetual ftruggle with each other. If the equilibrium be loft, the fuperior, obeying the law of gravity, may ruh into the inferior region, even to the earth. To accidents of this nature we mult afcribe thofe fudden torrents of frozen air, known by the name of hurricanes and fqualls, which feem to fall from heaven, and produce, in the warmeft feafons, and the hottelt regions of the earth, the cold of the polar circles. If the furrounding air refifts, their duration is limited to a fhort time; but when they fall in with currents already eftablifhed, they encreafe their violence, and become temperts, which laft feveral hours. Thefe tempefts are dry when the air is pure; but when it is loaded with clouds, they are attended with a deluge of rain and hail, which the cold air conden-
fes in its fall. It may alfo happen that a continued fall of water fhall accompany the rupture, increafed by the furrounding clouds, attracted to the fame vortex; and hence will refult thofe columns of water, known by the name of Typhons and water-fpouts (f). Thefe water-fpouts are not unufual on the coaft of Syria, towards Cape Wedjh and Mount Carmel; and it is obferved that they are mof frequent at the equinoxes, and in a ftormy kky , obfcured by clouds.

Mountains of a certain height often afford examples of this defcent of refrigerated air from the upper region. When their fummits are covering with fnow, at the approach of winter, impetuous torrents of wind, called by mariners frow winds, rufh down from them. They then fay, the mountains are defending themfolves, becaufe there winds blow on you, in whatever direction you approach them. The gulphs of Lyons and Alexandretta are remarked frequently to furnifh inftances of this kind of winds.

On the fame principles we may explain the phrnomena of thofe winds of the coaft, vul-
(f) Dr. Franklin has explained them in the fame manner.
garly

## EGYPT AND SYRIA. 341

garly called land breezes. It is obferved by mariners, that, in the Mediterranean, they blow from the land during the night, and in the day from the fea; the caufe of which is, that the air, rarefied by the heat of the day, and condenfed by the coldnefs of the night, rufhes alternately from the land to the fea, and the fea to the land. Thus, in Syria, the fide of Lebanon which faces the fea, being heated by the fun during the day, and efpecially towards noon, the air, on its declivity, being rarefied, and lofing its relative equilibrium with that of the fea, is forced upwards; but the new air, which takes its place, becoming heated, likewife, foon follows it, until, by this fucceffion, a current is formed fimilar to that we obferve in the funnels of a ftove or chimney $(g)$. When the fun fets, this action ceafes, the mountain cools, the air condenfes, and, condenfing, becomes heavier, and falls down again, thus forming a torrent which rufhes along the declivity to the fea. The current ceafes in the morning, on the fun's return, and the fame round
(g) This is often fenfible to the eye; but it is rendered ftill more evident by approaching a filk thread ar a piece of down to the funnels.

## $3 \div 2$ TRAVELSIN

is repeated. This wind does not advance above two or three leagues into the fea, becaufe the impulfe of its fall is gradually deftroyed by the refiftance of the mafs of air into which it enters. It is in proportion to the height and rapidity of this defcent, that the land breeze is extenfive. It reaches further at the foot of Lebanon, and the northern chain of eminences, becaufe the mountains in that quarter are loftier, fteeper, and nearer to the fea. There are often violent and fudden fqualls at the mouth of the Karmia (b), the deep valley of Bekaa collecting the air in its narrow channel, propels it as from a funnel. Thefe winds do not extend fo far on the coan of Paleftine, becaufe the mountains there are lower, and between them and the fea there is a plain of four or five leagues; and at Gaza, and on the coaft of Egypt, they are never known, becaufe that country has no declivity proper to caufe them. In hort, they are every where fronger in fummer, and feebler in winter, becaufe in the latter feafon the heat and rarefaction are lefs confiderable.
(b) Thefe fqualls are fo violent, that they fometimes puef fet boats; as I was once very near experiencing myfelf, This

This comparative fate of the air of the iea, and that of continents, is the caufe of a phxnomenon long fince obferved, viz. the general property of all land, and efpecially mountains, to attract clouds. Whoever has vifited different fea coafts, cannot but have remarked that clouds continually arife at fea, and regularly direct their courfe towards the land, and efpecially the higheft mountains. Some philofophers have afcribed this to an attractive virtue; but befides that, this occult quality is as unintelligible as the ancient borror of a vacuum, the mechanical caufe of that phenomenon may be explained by material agents; I mean the law of the equilibrium of Auids, by which the heavier air forces the lighter upwards; for continents, when under the fame parallel, and of like elevation, being always more heated than feas, a conftant current of air muft take place, and drive the clouds from the fea towards the land. This direction will be the more conftant, the more the mountains are heated. If the vapours meet with a flat and level country, they will glide over it without ftopping, becaufe the land being equally heated, there is nothing to caufe them to condenfe.

$$
Z_{4} \quad \mathrm{Th} s
$$

This is the reafon why it never, or but very rarely, rains, in fummer, in Egypt, or the deferts of Arabia and Africa. The air of thefe countries being heated and rarefied, repels the clouds, and, as it is the nature of all vapour to be elevated by hot air, they continue to float in the middle region, where the prevailing current carries them towards the higher parts of the continent, which perform, in fome meafure, as I have already faid, the office of a chimney. Being then at a greater diftance from the furface of the earth, which is the great receptacle of heat, they are refrigerated and condenfed, till their particles refolve into rain or frow. In winter, the effects vary with circumftances. During that feafon, when the fun is remote from the countries we are fpeaking of, the earth being lefs heated, the air in general affumes a temperature more nearly approaching to that of the high mountains; it becomes colder and more denfe; the vapours are no longer clevated to the fame height; the clouds are formed lower down; and frequently fall quite to the earth, and are called fogs. At this period, accumulated by the wefterly winds, and by the abfence of the currents which

## EGYPT AND SYRIA.

carry them off in fummer, they are compelled to fall upon the plains, and hence the folution of the problem (i): "The "evaporation being more confiderable in "fummer than in winter, why are there " more clouds, fogs, and rains in winter " than in fummer ?" Hence alfo we are able to explain another appearance obfervable both in Egypt and Paleftine ( $k$ ), "that if " there be a continual and gentle rain, it will " fall rather in the night than in the day." In there countries, it is generally obferved that clouds and fogs approach the earth at night, and rife from it in the day, becaufe the prefence of the fun fill excites a degree of heat fufficient to repel them; I have often experienced the truth of this at Cairo, in the months of July and Auguft, 1783. At funrife, we frequently had a fog, the thermometer being at feventeen degrees (l); two hours after, the thermometer being at twenty,
(i) See Chap. IV.
(k) I have obferved this in Paleftine, in the months of November, December, and January, 1784 and 1785. The temperature of the plain of Paleftine, efpecially towards Gaza, is nearly the fame with that of Egypt.
(l) By Reaumur's fcalc.
or, perhaps, twenty-fuur degrees, the fky was covered with fattered clouds driving to the fouth. On my return from Suez, about the fame time, that is, between the 24 th and 26th of July, we had no fog during the two nights we paffed in the defert; but on arriving, at break of day, in fight of the valley of Egypt, I obferved it covered with a body of vapours which had the appearance of a ftagnant lake. As the day came on, they began to move and rife, and, before eight o'clock in the morning, they had left the ground, and the air only fhewed fome fcattered clouds, which took their courfe along the valiey. The following year, being among the Druzes, I obferved nearly fimilar phænomena. Firf, about the end of June, there was formed a chain of clouds, to be attributed, no doubt, to the overHowing of Egypt by the Nile ( $m$ ), and which, in fact, proceeded from that quarter, and were paffing to the north-eaft ( $n$ ). After this firft
(m) It is not fuperfluous to obferve that the Nile, at that period, caufes a current along the whole coalt of Syria, which extends from Gaza to Cyprus.
(n) This appears to me to be the column of clouds mentioned by Baron de Tott. I have alfo obferved the miftinels of the horizon of Exypt, of which he fpeaks. irruption,
irruption, towards the end of July, and in Auguft, there was a fecond feafon of clouds. Every day, towards eleven o'clock, or about noon, the fky was overcaft, the fun was often invifible the whole afternoon, the fannin, or fummit of Lebanon, was capped with clouds, and many of them, afcending the declivities, remained among the vineyards and the pines, and I was frequently fo enveloped in a white, humid, warm and opake mift, as not to be able to fee four paces before me. About ten or eleven at night, the fky grew clear, the fars appeared, and the remainder of the night was very fine; the fun rofe fhining, and, towards noon, the like appearances returned in the fame circle. This repetition puzzled me the more, as I could not conceive what became of all this quantity of clouds. Part of them, it is true, paffed the chain of the Sannin; thefe I might fuppofe had proceeded to Anti-Lebanon, or the defert; but what was to become of that portion which was paffing along the declivity, at the moment the fun fet, for there was neither dew nor rain in which they could be confumed? To difcover the caufe of this, I afcended
afcended feveral mornings fucceffively, at day-break, a neighbouring eminence, and there, looking down upon the valley, and the fea, diftant, in an oblique line, about five leagues, I examined attentively the fate of the atmofphere. I at firft perceived nothing but a body of vapours which veiled the waters; and the horizon, towards the fea, appeared to me very thick, while on the fide of the mountains it was quite clear; as the fun enlightened that part, I difcovered clouds by the reflection of his rays; thefe at firft feemed to me very low; but, as the heat encreafed, they feparated, and rofe higher, and continually procecding towards the mountain, continued there the remainder of the day, as I have defcribed. From hence I concluded that the clouds I faw, thus mounting, formed a great part of thofe which were on the declivities in the evening, and which, not being able to rife fufficiently high, had been feized by the cold air, and thrown back on the fea, by the land breeze ; I imagined that they were retained there the whole night, till the fea breeze, getting up, drove them back upon the mountain, and hurried
hurried part of them over the fummit, to fall on the other fide in dews, or to moiften the parched air of the defert.

I have faid that thefe clouds conveyed no dews; and I have frequently remarked that there were fewer when the fky was clouded, than when the heavens were clear. But the dew is at all times lefs abundant on thefe mountains, than on the coaft, and in Egypt, which may be eafily explained, by fuppofing that the air is not able to elevate to that height the excefs of humidity with which it is loaded; for the dew, as is well known, is the excefs of humidity which the heated air raifes in vapour during the day, and which, condenfing by the coolnefs of the evening, falls down again in greater or lefs abundance, according to the vicinity of the country to the fea $(0)$. Hence the exceffive
(0) This refolves a queftion propofed to me at Yafa; viz. "Why one fweats more at Yafa, on the borders of "s the fea, than at Ramla, which is at three leagues dif"s tance up the country?" The reafon is, that the air of Yafa, being faturated with humid particles, excites perfpiration but flowly, while at Ramla, the air being more dry, caufes it quicker. For this reafon, alfo, the breath is vifible in winter, in our climates, and not in fummer.
dews in the Delta, which are lefs confiderable in the Thebais, and the defert, as I am well affured; and if the moifture does not fall when the heavens are obfcured, it is from its affuming the form of clouds, or being intercepted by them.

In other cafes, the flay being ferene, we fee the clouds fometimes difperfe and diffolve, like fmoke; at others, form in an inftant, and from a fmall fpeck, become of a prodigious fize. This is particularly obfervable at the fummit of Lebanon, and mariners have experienced that, the appearance of a cloud, on this peak is an infallible prefage of a wefterly wind. At fun-fet, I have often obferved there fmoky clouds adhering to the fides of the rocks of Nahr-el-Kelb, and augmenting fo rapidly, that in an hour the valley was quite full of them. The inhabitants fay, they are the vapours of the valley itfelf; but this valley being all ftone, and without water, it is impofiible that they hould be exhalations from that; it is more natural to fuppofe them vapours of the atmofphere, which, condenfed at the approach of night, fall in an imperceptible rain, and caule the mift which is then obferved. Fogs
are explicable on the fame principles. There are none in the hot countries diftant from the fea, nor during the fummer droughts; for, in thefe cafes, the air has no furplus of humidity. But they appear after the autumnal rains, and, even in fummer, after heavy fhowers, becaufe the earth has then imbibed matter for evaporation, and acquired a degree of coolnefs fufficient to caufe a condenfation of the vapours. In our climates, they always begin in the meadows, in preference to tilled ground. We frequently obferve, at the fetting of the fun, a fheet of fmoke, forming on the grafs, which foon increafes in extent and height. The reafon of this is, that humid and cool places condenfe the falling vapours fooner than thofe which are dry and dufty.

A variety of other obfervations might be made on the formation and nature of thefe vapours, which though, in reality, the fame, are called fogs, when they reft on the ground, and clouds, when they rife into the air. By confidering their various properties, we fhall perceive they are governed by the laws of combination, diffolution, precipitation, and faturation; of which modern phyfics, under
the appellation of chemiftry, is employed in developing the theory. But to treat of them, in this place, I fhould be under a neceffity of entering into details which would lead me too far from my fubject. I fhall confine myfclf, therefore, to one concluding obfervation, relative to thunder.

Thunder is known in the Delta as well as in Syria; but with this difference, that in the Delta, and the plain of Paleftine, it is extremely rare in fummer, and more frequent in winter; while in the mountains, on the contrary, it is more common in fummer, and very feldom heard in winter. In both thefe countries, it happens ofteneft in the rainy feafon, or abont the time of the equinoxes, efpecially the autumnal onc; it is further remarkable, that it never comes on from the land-fide, but always from the fea. The ftorms which fall on the Delta and Syria confantly come from the Mediterranean ( $p$ ).

Thefe
(p) I do not know what paffes in this refpect in Upper Egypt: as for the Delta, it appears that it fometimes receives clouds and thunder from the Ked Sea. On the day that I left Cairo, (26th September, $1 / 83$,) as night was coming on, a form appeared in the foutheaft,

Thefe ftorms, in general, happen either in the evening or morning, and rarely in the middle of the day ( $q$ ); they are accompanied with violent howers, and fometimes with hail, which, in an hour's time, render the country full of little lakes. Thefe circumiftances, and, above all, this perpetual connection of clouds with thunder, may fugge? the following remarks.

If thunder is conftantly attended with clouds, and they are abfolutely neceffary to its exiftence, it muft be caufed by fome of their elements. But in what manner are clouds formed? By the evaporation of water. How is this evaporation effected? By the prefence of the element of fire. Water
eaft, which foon produced feveral claps of thunder, and ended by a violent fall of hail, as large as the largeft fort of peas. It continued ten or twelve minutes; and my companions and I had time enough to collect a quantity of hail-ftones, fufficient to fill two large glafles, and could fay that we had drank iced water in Egypt. It is proper to add that it was at the time when the foutherly monfoon begins to blow on the RedSea.
(q) M. Niebuhr has alfo obferved, at Moka and Bombay, that ftorms always proceed from the fea.
Vol. I.
A $a$
o?
of itfelf is not volatic; fome agent is neceffary to raife it ; this agent is fire ; and hence, as has been alteady obferved, "evaporation " is always in proportion to the heat applied " to water." Each particle of water is rendered volatile by a particle of fire, and, unqueftionably, alfo, by a particle of air combined with it. This combination may be regarded ns a nentral falt, and, comparing it with nitre, we may fay the water in it reprefents the alkali, and the fire the nitrous acid. The clouds, thus compofed, float in the atmofphere until they meet with fomething which feparates their conftituent parts. If, from any caufe, thefe particles are fuddenly difunited, a detonation is the confequence, accompanied, as in nitre, with explofion and light. The igneous matter, and the air, being inftantly diffipated by the fhock, the water which was combined with them, reftored to its natural gravity, falls precipitately from the height to which it had been elevated ; and hence the violent fhowers which follow loud claps of thunder, and which happen, generally, at the end of forms, the igneous matter being then expended. Sometimes
times the particles of fire being combined with the air only, it melts like nitre ; and this it is, doubtless, which :produces thole lightnings, when no thunder is heard, called fires of the horizon (flux d'borizon) ( $r$ ). But is this igneous matter diflinet from the electric? Does it obferve peculiar laws and affinities in its combinations and detonations? This is what I foal not take upon me to examine. Thefe refearches are not fuited to a narrative of travels: I ought to confine myself to facts; and the few explanatory remarks I have added, though they were naturally fuggefted by them, have already led me too far from my fubject.
( $r$ ) Shooting flats hem aldo to be a particular combination of igneous matter. The Maronites of MarElias affured me that one of the fe ftars falling, three years ago, on two mules of the convent, killed them both, making an explofion like the report of a pittol, and leaving no more traces than thunder.

## C H A P. XXII.

> Of the Inbabitants of Syria.

SYRIA, as well as Egypt, has undergone revolutions which have confounded the different races of its inhabitants. Within two thoufand five hundred years, we may reckon ten invafions, which have introduced into that country a fucceffion of foreign nations. Firft, the Affyrians of Nineveh, who, paffing the Euphrates, about the year 750 before the Chriftian æra, within fixty years, obtained poffeffion of almof the whole country lying to the north of Judea. Next the Chaldeans, of Babylon, who, having deftroyed the power on which they were dependent, fucceeded, as by hereditary right, to its poffeffions, and completed the conqueft of Syria, except only the Inle of Tyre. The Chaldeans were followed by the Perfians, under Cyrus, and the Perfians, by the Macedonians, under Alexander. It then feemed as if Syria was about to ccafe being a vaffal to foreign powers, and to obtain a diftinct and independent government,
EGYPT AND SYRIA.
ment, according to the natural right of every country; but the people, who found in the Seleucidæ only cruel defpots and oppreffors, feeing themfelves reduced to the neceffity of bearing fome yoke, preferred the lightert; and Syria, yielding to the arms of Pompey, became a province of the Roman empire.

Five centuries after, when the fons of Theodofius divided their immenfe patrimony, this country changed the capital to which it was to appertain, without changing its mafters, and was annexed to the empire of Conftantinople. Such was its fituation when, in the year 622, the Arabian tribes, collected under the banners of Mahomet, feized, or rather laid it wafte. Since that period, torn to pieces by the civil wars of the Fatmites, and the Ommiades, wrefted from the Califs by their rebellious governors, taken from them by the Turkmen foldiery, invaded by the European crufaders, retaken by the Mamlouks of Egypt, and ravaged by Tamerlane and his Tartars, it has at length fallen into the hands of the Ottoman Turks, who have been its A ${ }^{2} 3$
mafters
mafters for two hundred and fixty-eight years.

Thefe viciffitudes have introduced into the country diftinct tribes of inhabitants, as various as the revolutions it has undergone, fo that the people of Syria muft not be confidered as one fingle nation, but rather as a mixture of different nations.

They may be divided into three principal claffes.

Firlt, The pofterity of the people conquered by the Arabs, that is, the Greeks of the Lower Empire.

Secondly, The pofterity of the Arabian conquerors.

Thirdly, The prefent ruling people, the Ottoman Turks.

Of thefe three claffes, the former muft be again fubdivided, in confequence of feveral diftinctions which have taken place among them. The Greeks then mult be divided into,

Firft, Greeks proper, vulgarly called Schifmatics, or feparated from the Romifh communion.

Secondly, Latin Greeks, re-united to that communion.

Thirdly,

Thirdly, Maronites, or Greeks of the fect of the Monk Maron, formerly independent of the two communions, but at prefent united to the latter.

The Arabs muft be divided into,
Firft, The proper defcendents of the conquerors, who have greatly intermixed their blood, and are confiderably the mort numerous.

Secondly, The Motoualis, diftinguifhed from thefe by their religious opinions.

Thirdly, The Druzes, diftinct likewife, from the fame reafon.

Fourthly, The Anfarians, who are alfo defcended from the Arabs.

To there people, who are the cultivators and fettled inhabitants of Syria, muft fill be added three other wandering tribes, or paftors, viz. the Turkmen, the Curds, and the Bedouin Arabs.

Such are the different races difperfed over the country, between the fea and the defert, from Gaza to Alexandretta.

In this enumeration, it is remarkable that the ancient inhabitants have no remaining reprefentative; their diftinguifhing character is loft and confounded in that of the Greeks,

$$
\text { A a } 4 \quad \text { who, }
$$

who, in fact, by a continued refidence from the days of Alexander, have had fufficient time entirely to take place of the ancient people; the country alone, and a few traits of manners and cuftoms, preferve the veftiges of diftant ages.

Syria has not, like Egypt, refufed to adopt the foreign races. They all become equally naturalized to the country. The features and complexion are governed by nearly the fame laws there as in the fouth of Europe, with the differences only which naturally refult from the nature of the climate. Thus the inhabitants of the fouthern plains are more fwarthy than thofe of the northern, and thefe, more fo than the inhabitants of the mountains. In Lebanon, and the country of the Druzes, the compleysion does not differ from that in our provinces in the middle of France. The women of Damafcus and Tripoli. are greatly boafted for the fairnefs, and even the regularity of their features; but we muft take this praife on truft, fince the veil, which they ferpetually wear, allows no perfon to make nice obfervations. In feveral diftricts, the women are lefs fcrupulous, without being Jefs chafte. In Paleftine, for example, you
may fee married women almoft uncovered; but want and fatigue have robbed the countenance of all its charms; their eyes alone are almoft every where beautiful; and the long drapery, which forms their general drefs, permits the body freely to difplay its fhape: it is fometimes without elegance, but its proportions at leaft are no way injured. I do not recollect having feen in Syria, nor even in Egypt, two perfons crooked or deformed. It is true, they are ftrangers to thofe tight-laced waift, which are fo much admired among us : they are in no eftimation in the eaft; and the young women, affifted by their mothers, very early ftudy, even fuperfitious receipts, to acquire an embonpoint: happily, Nature, by refifting our caprices, has fet bounds to our fingularities, for we do not perceive in Syria, where the fhape is not confined, that the body becomes any larger than in France, where it is fo tightly laced.

The Syrians are, in general, of a middling ftature, and are, as in all warm countries, lefs corpulent than the inhabitants of the north. We find, however, in the cities, fome individuals whofe amplitude of belly proves that the influence of diet is able, in
a certain degree, to counterbalance that of climate.

In other refpects, Syria has no difeafe peculiar to itfelf, but the pimple of Aleppo, which I fhall notice when I come to fpeak of that city. Other diforders are dyfenteries, inflammatory and intermittent fevers, which are the confequences of the bad fruit which the people greedily devour. The fmallpox is fometimes very fatal ; but the general and moft frequent illnefs is the cholic, the caufes of which are very evident, when we. confider that every body eats to excess of unripe fruit, raw vegetables, honey, cheefe, olives, ftrong oil, four milk, and ill-fermented bread. Thefe are the ufual food of all the inhabitants ; and the acid juices they contain produce crudities, naufea, and even frequent vomitings of bile. Accordingly, the firft prefcription in almoft all diforders is an emetic, which method of treatment, however, is only known to the European phyficians. Bleeding, as I have already faid, is neither neceflary, nor very ufeful. In imminent cafes, cream of tartar and tamarinds have the moft certain fuccefs.

The general language of Syria is the Arabic

Arabic tongue. M. Niebuhr reports, upon hearfay, that the Syriac is ftill ufed in fome villages of the mountains; but, though I interrogated, on this fubject, feveral monks, who are perfectly well acquainted with the country, I have not been able to learn any thing like it. I have been told only that, in the towns of Maloula and Sidnaia, near Damafcus, they fpeak a dialect fo corrupted, that it is difficult to be underftood. But this difficulty proves nothing, fince, in Syria, as in all the Arabian countries, the dialects vary at every place. The Syriac may be, therefore, regarded as a dead language; for the Maronites, who have preferved it in their liturgy, and in their mafs, underfand very little of it, while they recite them. We may affert the fame of the Greek. Among the monks and fchifmatic priefts, there are very few who have any knowledge of it, unlefs they have made it their particular fudy in the inands of the Archipelago: befides, we know that the modern Greek is fo corrupted, that it would no more enable a man to underftand Demofthenes, than the Italian to read Cicero. The Turkinh language is only ufed, in Syria, by the military, perfons
$3^{64}$ TRAVELS IN
in office, and the Turkman hordes (a). Some of the natives learn it, as the Turks learn Arabic, to facilitate their dealings with ftrangers : but the pronunciation and accent of thefe two languages have fo little analogy that they always continue foreign to each other. The Turks, habituated to a nafal and pompous profody, are rarely able to imitate the harfh founds and Atrong afpirations of the Arabic. This tongue makes fuch repeated ufe of vowels and guttural confonants that, on hearing it fpoken for the firft time, you would imagine they were gargling their throats. On this account it is difagreeable and difficult to all Europeans ; but fuch is the power of habit that, when we complain to the Arabs of its afperity, they accule us of a want of ear, and retort the charge upon our languages. Of thefe the Italian is that which they prefer; and they compare, with fome reafon, the French to the Turkifh, and the Englinh to the Perfian. In the dialects of their own we find
(a) At Alexandretta, and Beilam, which is contiguous, they fpeak Tuikifh; but they muft be regarded as frontiers of Caramania, where 'Turkifh is the vulgar tongue.
almoft the fame difference. The Arabic of Syria is much harfher than that of Egypt; the pronunciation of the profeffors of the law at Cairo is efteemed a model of facility and elegance. But, according to the obfervation of M . Niebuhr, that of the inhabitants of the Yemen, and the fouthern coalt, is infinitely fofter, and gives a fluency to the Arabic, of which he could not have thought it fufceptible. Attempts have been made to eftablifh an analogy between the climates and the pronounciation of languages; it has been faid, for infance, that the inhabitants of the north fpeak more with their lips and teeth than thofe of the fouth. This may be juft when applied to fome parts of our continent; but, to decide univerfally, we muft make more circumftantial and extenfive obfervations. We fhould not too haftily pronounce thefe general decifions concerning languages and their different characters ; becaufe we are always naturally led to judge from our own, and, confequently, from a prejudice of habit extremely inimical to juft reafoning.

Among the different inhabitants of Syria I have mentioned, fome are difperfed, indifferently
ferently, over every part of the country, others confine themfelves to particular fots, which it will be neceflary to determine.

The Greeks proper, the Turks, and the Arabian peafants, belong to the former clafs, with this difference, that the Turks refide only in the towns where they are in poffeffion of the military employments, and the offices of the magiftracy, and where they exercife the arts. The Arabs and the Greeks inhabit the villages, and form the clafs of hufbandmen in the country, and the inferior people in the towns. The part of the country which contains the moft Greek villages is the $\mathrm{Pa}-$ chalic of Damafcus.

The Greeks of the Romifh communion, who are much lefs numerous than the fchifmatics, are all retired within the towns, where they cultivate the arts and commerce. The protection of the Franks, procured them, in the late war, a decided fuperiority in trade, wherever there are European fettlements.

The Maronites form a mational body, which occupies, almof exclufively, the whole country comprifed betwcen Nabr-el-kelb (the river of the Dog) and Nabr-cl-barcd
EGYPT AND SYRIA.
(the cold river), from the fummit of the mountains on the eaft, to the Mediterranean on the weft.

The Druzes border upon them, and extend from Nahr-el-kelb to the neighbourhood of Sour, (Tyre) between the valley of Bekaa and the fea.

The country of the Motoualis formerly included the valley of Bekaa, as far as Sour: but this people, of late years, have undergone a revolution which has reduced them almoft to nothing.

As for the Anfarians, they are difperfed throughout the mountains, from Nahr-akkar as far as to Antakia; they are diftinguifhed into different tribes, fuch as the Kelbia, the Kadmoufia, the Shamfia, \&c.

The Turkmen, the Curds, and the Bedouins, have no fixed habitations, but keep perpetually wandering with their tents and herds, in limited diftricts, of which they look upon themfelves as the proprietors. The Turkman hordes generally encamp on the plain of Antioch; the Curds in the mountains between Alexandretta and the Euphrates; and the Arabs fpread over the whole
whole frontier of Syria, adjacent to theit deferts, and even the plains of the interior part of the country, as thofe of Paleftine, Bekaa, and Galilee.

To form more difinct ideas of there different claftes, let us confider more circumfantially what is peculiar to each of them.

CHAP .

EGYPT AND SYRIA.

## C H A P. XXIII.

Of the pafforal, or wandering Tribes of Syria.
SECT. I.

Of the Turkmen.
THE Turkmen are of the number of thofe Tartar hordes, who, on the great revolutions of the empire of the Califs, emigrated from the eaftward of the Cafpian fea, and fpread themfelves over the vaft plains of Armenia and Afia Minor. Their language is the fame with that of the Turks, and their mode of life nearly fimilar to that of the Bedouin Arabs. Like them, they are paftors, and confequently obliged to travel over immenfe tracts of land to procure fubfiftence for their numerous herds. But there is this difference, that the countries frequented by the Turkmen being rich in pafturage, they can feed more cattle on them, and are therefore lefs difperfed than Vor. I. B b the
the Arabs of the defert. Each of their ordous, or camps, acknowledges a Chief, whofe power is not determined by fixed laws, but governed by cuftom and circumftances. It is rarely abufed, becaufe the fociety is compact, and the nature of their fituation maintains fufficient equality among its members. Every man able to bear arms is anxious to carry them, fince on his individual force depend both his perfonal fafety, and the refpect paid him by his companions. All their property confifts in cattle, that is camels, buffaloes, goats, and efpecially fheep. They live on milk, butter, and meat, which are in great abundance among them, and the furplus of which they fell in the towns and the neighbouring country, for they are almoft able alone to fupply the butcheries. In return, they take arms, clothes, money, and corn. Their women fpin wool, and make carpets, the ufe of which is immemorial in thefe countries, and confequently indicates their manner of living to have been always the fame. As for the men, their whole occupation confifts in fmoking, and looking after their flocks. Perpetually on horfeback,
EGYPT AND SYRIA.
back, with their lances on their fhoulders, their crooked fabres by their fides, and their piftols in their belts, they are expert horfemen and indefatigable foldiers. They have frequent differences with the Turks, who dread them; but as they are divided among: themfelves, and form feparate camps, they do not affume that fuperiority which their combined forces would enfure them. The Pachalics of Aleppo and Damafcus, which are the only parts of Syria they frequent, may be computed to contain about thirty thoufand wandering Turkmen. A great number of thefe tribes pals, in fummer, into Armenia and Caramania, where they find grafs in greater abundance, and return to their former quarters in the winter. The Turkmen are reputed Muffulmen, and generally bear the diftinguifhing mark, circumcifion. But they trouble themfelves very little about religion, and they have neither the ceremonies, nor the fanaticifm of fedentary nations. As for their manners, to defcribe them accurately, it would be neceffary to have lived among them. They have, however, the reputation of not being robbers, like the Arabs, though they are neither lefs generous, nor lefs hofpitable than they; Bb 2 and
and when we confider that they live in plenty, without being rich, and are inured to war, and hardened by fatigue and danger, we may prefume they are equally removed from the ignorance and fervility of the peafants, and the corruption and felfilhnefs of the inhabitants of the towns.
S E C T. II.

## Of the Curds.

The Curds are another national body, the divided tribes of which are equally difperfed over the Lower Afia, and have extended themfelves pretty confiderably, efpecially within the laft hundred years. Their original country is the chain of mountains from whence iffue the different branches of the Tigris, which, furrounding the upper part of the great $\mathbb{Z a b}$, paffes to the fouthward, as far as the frontiers of the Irak-adjami, os Perfian Irak (a). In modern geography, it

[^9]is known by the name of Curd-efton. This country is mentioned in the moft ancient traditions and hiftories of the eaft, in which it is made the fcene of feveral mythological events. The Chaldean Berofus, and the Armenian Maribas, cited by Mofes Chorenenfis, affert that it was in the mountains Gord-ouxis (b), that Xifuthrus landed after efcaping from the deluge; and the local circumfances which they add, prove, what was otherwife fufficiently evident, that Gord and Curd are the fame. Thofe were the fame Curds who are mentioned by Xenophon under the denomination of Card-ucbi, and who oppofed the retreat of the Ten Thoufand. This hiftorian obferves that, though fhut in on all fides by the Perfian empire, they had conftantly braved the power of the Great King, and the arms of his Satraps. They have changed but little in their modern flate; and, though, in appearance, tributaries to the Porte, pay very little refpect to the orders of the Grand Signior, or his Pachas. M. Niebuhr, who travelled in the fe countries in 1769 , reports, that in their mountains they are fubject to a
(b) Strabo, lib. If. fays, that the Niphates, and its chain of mountains, are called Gorilourei.
fort of feodal government, which appears to me fimilar to that we obferve among the Druzes. Each village has its chief, and the whole nation is divided into different and independent factions. The difputes infeparable from this fate of anarchy have detached from the nation a great number of tribes and families, which have adopted the wandering life of the Turkmen and Arabs.

Thefe are difperfed in the Diarbekir, and over the plains of Arzroum, Erivan, Sivas, Aleppo and Damafcus: all their tribes united are eftimated to excced one hundred and forty thoufand tents, that is, one hundred and forty thoufand armed men. Like the Turkmen, thefe Curds are paftors and wanderers; but differ from them in fome particular cuftoms. The Turkmen give their daughters a marriage dower: the Curds receive a premium for them. 'The Turkmen pay no refpect to that antiquity of extraction which we call nobility: the Curds honour it above every thing. The Turkmen do net feal: the Curds are almont every where looked upon as plunderers; on which account, they are much dreaded in the neighbourhoori of Aleppo, and of Antioch, where
they occupy, under the name of Bagdafhlia, the mountains to the eaft of Beilam, as far as near Kles. In this Pachalick, and in that of Damafcus, their number exceeds twenty thoufand tents and huts; for they have alfo fixed habitations. They are reputed Mahometans; but they never trouble themfelves about religious rites or opinions. Several of them, diftinguifhed by the name of Yazdia, worfhip Shaitain, or Satan, that is, the genius who is the enemy (of God). This notion, efpecially prevalent in the Diarbekir, and the frontiers of Perfia, is a relic of the ancient fyftem of the good and evil principles, which, varied according to the fpirit of the Perfian, Jewifh, Chriftian, and Mahometan doctrines, has continually prevailed in there countries. Zoroafter is generally confidered as its author; but, long before his time, Egypt acknewledged Orofmades and Arimanius, under the names of Ofiris and Typhon. It is no lefs an error, likewife, to fuppofe, that this dogma was not propagated prior to the reign of Darius Hyftafpes, fince Zoroafter, who taught it, flourifhed in Media, and was cotempofary with Solomon.

$$
\text { B b } 4 \quad \text { Language }
$$

Language is the principal indication of the confanguinity of nations. That of the Curds is divided into three dialects. It has neither the afpirations nor the gutturals of the Arabic; and I am afiured that it does not refemble the Perfian ; fo that it muft be an original language. Now, if we confider the antiquity of the people who fpeak it; and that we know they are related to the Medes, Affyrians, Perfians, and even the Parthians (c), we may be allowed to conjectu:e, that a knowledge of this tongue might throw fome light on the ancient hiftory of thefe countries. There is no known dictionary of it ; but it would be no difficult matter to form one. If the government of France hould think proper to offer encouragements to the Drogmen, or to the miffionaries of Aleppo, the Diarbekir, or Bagdad, proper perfons might foon be found to accomplifh fuch an undertaking (d).

Sect.
(c) "On the Tigris," fays Strabo, lib. 16, " are " many places belonging to the Parthians, whom the "s ancients called Carduchi."
(d) The Emprefs of Ruffia has lately given orders to Doctor Pallas to make a collection of all the languages fpoker

## S ect. III.

## Of the Bedouin Arabs.

A third wandering people in Syria, are the Bedouin Arabs, whom we have already found in Egypt. Of there I made but a flight mention in treating of that province, becaufe, having only had a tranfient view of them, without knowing their language, their name fuggefted but few ideas to my mind; but having been better acquainted with them
fpoken in the Ruffian empire; and thefe refearches muft extend cven to the Cuban and Georgia; and, perhaps, to Curdeftan. When this collection is completed, it will be neceffary to reduce all the alphabet of there languages to one; for this diverfity of Arabic, Armenian, Georgian, Iberian, and Tartarian alphabet is a great obftacle to the advancement of fcience. This will, perhaps, appear impofible to many perfons; but, from fome experiments of the fame nature, which I have myfelf made, I think I may venture to pronounce it not only practicable, but eafy. It is fufficient to be well acquainted with the elements of fpeech, to be able to clafs the vowels and confonants of all the alphabets, It is proper alfo to obferve here, that the firft book of every nation is the dictionary of its language.
in Syria; having even made a journey to one of their camps, near Gaza, and lived feveral days amony them, I am now able to treat of them with more minuteners and accuracy.

In general, when fpeaking of the Arabs, we fhould diftinguifh whether they are cultivators, or pafors; for this difference in their mode of life occafions fogreat a one in their manners, and genius, that they become almoft foreign nations, with reipect to each other. In the former cade, leading a fedentary life, attached to the fame foil, and fubject to regular governments, the focial fate in which they live, very nearly refembles our own. Such are the inhzibitants of the Yemen; and fuch, alfo, are the defcendants of thofe ancient conquerors, who have cither entirely, or in part, given inhabitants to Syria, Egypt, and the Barbary fates. In the fecond inftance, having only a tranfient intereft in the foil, perpetually removing their tents from one place to another, and under fubjection to no laws, their mode of exiftence is neither that of polifhed nations, nor of favages; and, therefore, more particulaily merits our attention. Such are the Bedouins,

Bedouins, or inhabitants of the vaft deferts which extend from the confines of Perfia, to Morocco. Though divided into independent communitics, or tribes, not unfrequently hoftile to each other, they may fill be confidered as forming one nation. The refemblance of their language is a manifeft token of this relationfhip. The only difference that exifts between them is, that the African tribes are of a lefs ancient origin, being pofterior to the conqueft of thefe countries by the Califs, or fuccefiors of Mahomet; while the tribes of the defert of Arabia, properly fo called, have defcended by an uninterrupted fucceffion from the remoteft ages; and it is of thefe I mean more efpecially to treat, as being more immediately connected with my fubject. To thefe the orientals are accuftomed to appropriate the name of Arabs, as being the moft ancient, and the pureft race. The term Bedaoui is added as a fynonimous expreffion, fignifying, as I have obferved, imhabitant of the Defert; and this term has the greater propriety, as the word Arab, in the ancient language of thefe countries, fignifies a folitude or defert.

It is not without reaton that the inhabitants of the defert boaft of being the purelt and the beft preferved race of all the Arab tribes: for never have they been conquered, nor have they mised with any other people, by making conquefts; for thofe by which the general name of Arabs has been rendered famous, really belong only to the tribes of the Hedjaz, and the Yemen; thofe who dwelt in the interior of the country, never emigrated at the time of the revolution effected by Mahomet; or if they did take any part in it, it was confined to a few individuals, detached by motives of ambition. Thus we find the prophet, in his Koran, continually ftiling the Arabs of the defert rebels, and infidels; nor has fo great a length of time produced any very confiderable change. We may affert they have, in every refpect, retained their primitive independence and fimplicity. Every thing that ancient hiftory has related of their cuftoms, manners, language, and even their prejudices, is almoft minutely true of them to this day; and if we confider, befides, that this unity of character, preferved through fuch a number of ages, fill fubfins, even in the moft diftant fitua-
EGYPT AND SYRIA.
tions, that is, that the tribes moft remote from each other preferve an exact refemblance, it muft be allowed, that the circumftances which accompany fo peculiar a moral ftate, are a fubject of moft curious enquiry.

In Europe, and efpecially in its more civilized and improved countries, where we have no examples of wandering people, we can fcarcely conceive what can induce men to adopt a mode of life fo repugnant to our ideas. We even conceive with difficulty what a defert is, or how it is poffible for a country to have inhabitants, if it be barren; or why it is not better peopled, if it be fufceptible of cultivation. I have been perplexed, myfelf, with thefe difficulties, as well as others; for which reafon, I fhall dwell more circumftantially on the facts which will furnifh us with their explanasion.

The wandering and paftoral life led by feveral Afiatic nations, arifes from two caufes. The firft is, the nature of the foil, which, being improper for cultivation, compels men to have recourfe to animals, which content themfelves with the wild herbage of the earth. Where this herbage is
but thin, a fingle animal will foon confume the produce of a great extent of ground, and it will be neceffary to run over large tracts of land. Such is the cafe of the Arabs in the defert of Arabia, properly fo called, and in that of Africa.

The fecond caufe muft be attributed to habit, fince the foil is cultivable, and even fertile, in many places; fuch as the frontiers of Syria, the Diarbekir, Natolia, and the greateft part of the diftricts frequented by the Curds and Turkmen. But it appears to me that thefe habits are only the effect of the political ftate of the country, fo that the primary caufe of them mult be referred to the government itfelf. This opinion is fupported by daily facts; for as often as the different hordes and wandering tribes find peace and fecurity, and a pofibility of procuring fufficient provifions, in any diftrict, they take up their refidence in it, and adopt, infenfibly, a fettled life, and the arts of cultivation. But when, on the contrary, the tyranny of the government drives the inhabitants of a village to extremity, the peafants defert their houfes, withdraw with their families into the mountains, or wander in
the plains, taking care frequently to change their place of habitation, to avoid being furprifed. It often happens even that individuals, turned robbers, in order to withdraw themfelves from the laws, or from tyranny, unite and form little camps, which maintain themfelves by arms, and, increafing, become new hordes, and new tribes. We may pronounce, therefore, that in cultivable countries, the wandering life originates in the injuftice or want of policy of the government ; and that the fedentary and cultivating ftate is that to which mankind is moft naturally inclined.

With refpect to the Arabs, they feem efpecially condemned to a wandering life, by the very nature of their deferts. To paint to himfelf thefe deferts, the reader muft imagine a fky almoft perpetually inflamed, and without clouds, immenfe and boundlefs plains, without houfes, trees, rivulets, or hills, where the cye frequently meets nothing but an extenfive and uniform horizon, like the fea, though in fome places the ground is uneven and ftoney. Almof invariably naked on every fide, the earth prefents nothing but a few wild plants, thinly fcattered,
fcattered, and thickets, whofe folitude is rarely difturbed but by antelopes, hares, locufts, and rats. Such is the nature of nearly the whole country, which extends fix hundred leagues in length, and three bundred in breadth, and ftretches from Aleppo to the Arabian fea, and from Egypt to the Perfian gulph.

It muft not, however, be imagined that the foil in fo great an extent is every where the fame; it varies confiderably in different places. On the frontiers of Syria, for example, the earth is in general fat and cultivable, nay, even fruitful. It is the fame alfo on the banks of the Euphrates; but in the internal parts of the country, and towards the fouth, it becomes white and chalky, as in the parallel of Damafcus; rocky, as in the Tih, and the Hedjaz; and a pure fand, as to the eaftward of the Yemen. This variety in the qualities of the foil is productive of fome minute differences in the condition of the Bedouins. For inftance, in the more fterile countries, that is thofe which produce but few plants, the tribes are feeble, and very diftant ; which is the cafe in the defert of Suez, that of the Red Sea, and the interior
of the Great Defert, called the Najd. When the foil is more fruitful, as between Damarcus and the Euphrates, the tribes are more numerous, and lefs remote from each other; and, laftly, in the cultivàble diftricts, fuch as the Pachalics of Aleppo, the Hauran, and the neighbourhood of Gaza, the camps are frequent and contiguous. In the former inftances, the Bedouins are purely paftors, and fubfift only on the produce of their herds, and on a few dates, and flefh meat, which they eat, either frefh, or dried in the fun, and reduced to a powder. In the latter, they fow fome land, and add cheefe, barley, and even rice, to their flefh and milk meats.

If we examine the caufes of the fterility and uncultivated ftate of the Defert, we fhall find it is principally to be attributed to the abfence of fountains and rivers, and, in general, to the want of water. This want of water itfelf is occafioned by the nature of the country, which being flat, and deflitute of mountains, the clouds glide over its heated furface, as I have already remarked is the cafe with Egypt. They never reft there but in winter, when the coldnefs of the atmofphere hinders them from rifing, and diffolves Vol. I.

C c
the:
them into rain. The rakednefs of this coun-try-is alfo another caufe of drought, fince the air is for that reafon more eafily heated, and compels the clouds to rife. It is probable that a change of climate might be effected, if the whole defert were planted with trees; as for example, with pine trees.

The confequence of the winter rains is, that in thofe parts where the foil is good, as on the fronticrs of Syria, a cultivation takes place confiderably fimilar to that of even the interior of the province; but as thefe rains neither produce fprings, nor durable rivulcts, the inhabitants are expofed to the inconvenience of wanting water the whole fummer. To remedy this it is neceffary to have recourfe to art, and to form wells, refervoirs, and ciferns, in which they collect their annual fupplies: fuch works require money and labour, and are, after all, expofed to a varicty of accidents. War may deftroy in one day, the labour of many months, and the refources of the year. A drought, which is but too common, may caufe the failure of a crop, and reduce the inhabitants even to a total want of water. It is true, that by digging it is almoft every where
to be found, at from fix to twenty feet depth, but this water is brackif, as in all the defert of Arabia and Africa (e); it alfo frequently dries up, when thirft and famine fucceed ; and if the government does not lend its aid, the villages are deferted. It is evident that agriculture muft be very precarious in fuch a country, and that under a government like that of the Turks, it is fafer to lead a wandering life, than to chuie a fettled habitation, and re? for fubfiftence on agriculture.

In thofe diftricts where the foil is ftoney and fandy, as in the Tih, the Hedjaz, and the Najd, thefe rains make the feeds of the wild plants hoot, and revive the thickets, ranunculas, wormwood, and kali. They caufe marhes in the lower grounds, which produce reeds and grafs; and the plain affumes a tolerable degree of verdure. This is the feafon of abundance both for the herds and their mafters; but on the return of the
(e) This faline quality is fo inkerent in the foil, that it impregnates even the plants. All thofe of the defert abound in alkali, and Glauber's falts; but it is remarkable that this falt diminifhes as we approach the mountains, where it is fcarccly fenfitile.
heats, every thing is parched up, and the earth, converted into a grey, and fine duft, prefents nothing but dry ftems, as hard as wood, on which neither horfes, oxen, not even goats can feed. In this fate the Defert would become uninhabitable, and muft be totally abandoned, had not nature formed an animal no lefs hardy and frugal than the foil is fterile and ungrateful; I mean the camel. No creature feems fo peculiarly fitted to the climate in which it exifts. We are tempted to affirm the nature of the one has been adapted to that of the other by fome difpofing intelligence. Defigning the camel to dwell in a country where he can find little nourifhment, Nature has been fparing of her materials in the whole of his formation. She has not beftowed on him the plump flefhinefs of the ox, horfe, or elephant ; but, limiting herfelf to what is ftrictly neceffary, fhe has given him a fmall head without ears, at the end of a long neck without flefh. She has taken from his legs and thighs every mufcle not immediately requifite for motion; and, in fhort, has beftowed on his withered body only the veffels and tendons neceffary to connect its frame together. She has fur-
EGYPT AND SYRIA.
nifhed him with a ftrong jaw, that he may grind the hardeft aliments; but left he fhould confume too much, fhe has ftraitened his fomach, and obliged him to chew the cud. She has lined his foot with a lump of fefh, which, fliding in the mud, and being no way adapted to climbing, fits him only for a dry, level, and fandy foil, like that of Arabia: fhe has evidently deftined him likewife to flavery, by refufing him every fort of defence againt his enemies. Deflitute of the horns of the bull, the hoof of the horfe, the tooth of the elephant, and the fwiftnefs of the ftag, how can the camel refift or avoid the attacks of the lion, the tyger, or even the wolf? To preferve the fpecies, therefore, Nature has concealed him in the depth of the vaft deferts, where the want of vegetables can attract no game, and whence the want of game repels every voracious animal. Tyranny muft have expelled man from the habitable parts of the earth, before the camel could have loft his liberty. Become domeftic, he has rendered habitable the moft barren foil the world contains. He alone fupplies all his mafter's wants. The milk of the camel nourifhes the family of the Arab, under the varied forms

[^10]of curds, cheefe, and butter; and they often feed upon his flefh. Slippers and harnefs are made of his flkin, tents and clothing of his hair. Heavy burthens are tranfported by his means; and when the earth denies forage to the horfe, fo valuable to the Bedouin, the fhe camel fupplies that deficiency by her milk, at no other coff, for fo many advantages, than a few falks of brambles or wormwood, and pounded date kernels. So great is the importance of the camel to the delert, that were it deprived of that ureful animal, it muft infallibly lofe every inhabitant.

Such is the fituation in which nature has placed the Bedouins, to make of them a race of men equally fingular in their phyfical and moral character. This fingularity is fo Ariking, that even their neighbours, the Syrians, regard them as extraordinary beings; efpecially thofe tribes which dwell in the depths of the deferts, fuch as the Anaza, Kaibar, Tai, and others, which never approach the towns. When, in the time of Shaik Daher, fome of their horfemen came as far as Acre, they excired the fame curiofty there, as a vifit from the favages of America would among us. Sivery body viewed with furprize thefe men,
who were more diminutive, meagre, and fwarthy, than any of the known Bedouins. Their withered legs were only compofed of tendons, and had no calves. Their bellies feemed to cling to their backs, and their hair was frizzled almoft as much as that of the negroes. They, on the other hand, were no leis aftonifhed at every thing they faw; they could neither conceive how the houfes and minarets could fand erect, nor how men ventured to dwell beneath them, and always in the fame fpot; but, above all, they were in an ecftafy on beholding the fea, nor could they comprehend what that defert of water could be. They were told of mofques, prayers, and ablutions; but they afked what thofe meant, and enquired who Mofes, Jefus Chrift, and Mahomet, were ; and why, fince the inhabitants were not of feparate tribes, they followed different leaders?

We may imagine, that the Arabs of the frontiers are not fuch novices; there are even feveral fmall tribes of them, who, living in the midft of the country, as in the valley of Fekaa, that of the Jordan, and in Paleftine, approach nearer to the condition of the peafants; but there are defpifed by the others,

$$
-\mathrm{Cc} 4
$$

who look upon them as baftard Arabs, and Rayas, or flaves of the Turks.

In general, the Bedouins are fmall, meagre, and tawny; more fo, however, in the heart of the defert, than on the frontiers of the cultivated country; but they are always of a darker hue than the neighbouring peafants. They alfo differ among themfelves in the fame camp; and I have remarked, that the Shaiks, that is, the rich, and their attendants, were always taller, and more corpulent, than the common clafs. I have feen fome of them above five feet five and fix inches bigh; though, in general, they do not exceed five feet two inches. This difference can only be attributed to their food, with which the former are fupplied more abundantly than the latter ( $f$ ). It may, likewife, be affirmed, that the lower clafs of Bedouins live in a fate of habitual wretchednefs and famine. It will appear almof incredible to us, but it is an undoubted fact, that the quantity of food ufually confumed by the
(f) The effeds of this are equally evident in the Arabian and Turkmen camels; for thefe latter, dwelling in ccurbrics ich in forage, are become a feceies more roiull and fefty than the former.
greateft part of them, does not exceed fix ounces a day. This abftinence is moft remarkable among the tribes of the Najd, and the Hedjaz. Six or feven dates foaked in melted butter, a little fweet milk, or curds, ferve a man a whole day; and he efteems himfelf happy, when he can add a fmall quantity of coarfe flour, or a little ball of rice. Meat is referved for the greateft feftivals; and they never kill a kid but for a marriage or a funeral. A few wealthy and generous Shaiks alone can kill young camels, and eat baked rice with their victuals. In times of dearth, the vulgar, always half famifhed, do not difdain the moft wretched kinds of food ; and eat locufts, rats, lizards, and ferpents broiled on briars. Hence are they fuch plunderers of the cultivated lands, and robbers on the high-roads : hence, alfo, their delicate conftitution, and their diminutive and meagre bodies, which are rather active than vigorous. It may be worth while to remark, that their evacuations of every kind, even perfpiration, are extremely fmall; their blood is fo deftitute of ferofity, that nothing but the greateft heat can preferve its fluidity. This, however,
does not prevent them from being tolerably healthy, in other relpects, for maladies are lefs frequent among them than among the inhabitants of the cultivated country.

From there facts, we are by no means juftified in concluding, that the frugality of the Arabs is a virtue purely of choice, or even of climate. The extreme heat in which they live, unqueftionably facilitates their abflinence, by deftroying that activity which cold gives to the ftomach. Their being habituated alfo to fo fparing a diet, by hindering the dilatation of the ftomach, becomes doubtlefs a means of their fupporting fuch abfemioufnefs; but the chief and primary motive of this habit, is with them, as with the reft of mankind, the necefity of the circumftances in which they are placed, whether from the nature of the foil, as I have before explained, or that fate of fociety in which they live, and which I fhall now proceed to examine.

I have already faid, that the Bedouin Arabs are divided into tribes, which conflitute fo many diftinct nations. Each of theie tribes appropriates to incle a tract of land forming its domain; in this they do not differ from cultiating nations, except that their territory
EGYPT AND SYRIA.
tequires a greater extent, in order to furnifh fubfitence for their herds throughout the year. Each of thefe tribes is collected in one or more camps, which are difperfed through the country, and which make a fucceffive progrefs over the whole, in proportion as it is exhaufted by the cattle; hence it is, that within a great extent a few fots only are inhabited, which vary from one day to another; but as the entire face is neceffary for the annual fubfintence of the tribe, whoever encroaches on it is deemed a violator of property; this is with them the law of nations. If, therefore, a tribe, or any of its fubjects, enter upon a foreign territory, they are treated as enemies, and robbers, and a war breaks out. Now, as all the tribes have affinities with each other by alliances of blood, or conventions, leagues are formed, which render thefe wars more or lefs general. The manner of proceeding, on fuch occafions, is very fimple. The offence made known, they mount their horfes, and feek the enemy; when they meet, they enter into a parley, and the matter is frequently made up; if not, they attack either in fimall bodies, or man to man. They encounter
each other at full fpeed, with fixed lances, which they fometimes dart, notwithftanding their length, at the flying enemy; the victory is rarely contefted; it is decided by the firft mock, and the vanquifhed take to flight full gallop over the naked plain of the defert. Night generally favours their efcape from the conqueror. The tribe which has lof the battle frikes its tents, removes to a diftance, by forced marches, and feeks an afylum among its allies. The enemy, fatiffied with their fuccefs, drive their herds farther on, and the fugitives foon after return to their former fituation. But the flaughter made in there engagements frequently fows the feeds of hatreds which perpetuate there diffenfions. The intereft of the common fafety has, for ages, eftablifhed a law among them, which decrecs that the blood of every man who is flain muft be avenged by that of his murderer. This vengeance is called Tar, or retaliation; and the right of exacting it devolves on the neareft of lin to the deceafed. So nice are the Arabs on this point of honour, that if any one neglects to feek his retaliation, he is difgraced for ever. We, therefore, watches every opportunity
opportunity of revenge: if his enemy perifhes from any other caufe, ftill he is not fatisfied, and his vengeance is directed againft the neareft relation. Thefe animofities are tranfmitted, as an inheritance, from father to children, and never ceafe but by the extinction of one of the families, unlefs they agree to facrifice the criminal, or purchafe the biood for a ftated price, in money or in flocks. Without this fatisfaction, there is neither peace, nor truce, nor alliances between them, nor fometimes, even between whole tribes: There is blood beitween us, fay they, on every occafion; and this expreffion is an infurmountable barrier. Such accidents being neceffarily numerous in a long courfe of time, the greater part of the tribes have ancient quarrels, and live in an habitual ftate of war ; which, added to their way of life, renders the Bedouins a military people, though they have made no great progrefs in war as an art.

Their camps are formed in a kind of irregular circle, compofed of a fingle row of tents, with greater or lefs intervals. Theie tents, made of goat or camels hair, are black or brown, in which they differ from thore
of the Turkmen, which are white. They are ftretched on three or four pickets, only five or fix feet high, which gives them a very flat appearance; at a diftance, one of thefe camps feems only like a number of black fpots; but the piercing eye of the Bedouin is not to be deceived. Each tent, inhabited by a family, is divided, by a curtain, into two apartments, one of which is appropriated to the women. The empty fpace within the large circle ferves to fold their cattle every evening. They never have any intrenchments; their only advanced guards and patroles are dogs; their horfes remain faddled, and ready to mount on the firft alarm; but, as there is neither order nor regularity, thefe camps, always eafy to furprife, afford no defence in cafe of an attack: accidents, thorefore, very frequently happen, and cattle are carried off every day; a fpecies of marauding war in which the Arabs are very experienced.

The tribes which live in the vicinity of the Turks, are fill more accuftomed to attacks and alarms; for thefe ftrangers, arrogating to themfelves, in right of conquef, the property of the whole country, treat the

Arabs as rebel vaffals, or as turbulent and dangerous enemies. On this principle, they never ceafe to wage fecret or open war againft them. The Pachas ftudy every occafion to harafs them. Sometimes they conteft with them a territory which they had let them, and at others demand a tribute which they never agreed to pay. Should a family of Shaiks be divided by intereft or ambition, they alternately fuccour each party, and conclude by the deffruction of both. Frequently too they poifon or affaffinate thofe chiefs whofe courage or abilities they dread, though they fhould even be their allies. The Arabs, on their fide, regarding the Turks as ufurpers and treacherous enemies, watch every opportunity to do them injury. Unfortunately, their vengeance falls oftener on the innocent than the guilty. The harmlefs peafant generally fuffers for the offences of the foldier. On the flighteft alarm, the Arabs cut their harvefts, carry off their flocks, and intercept their communication and commerce. The peafant calls them thieves, and with reafon ; but the Bedouins claim the right of war, and perhaps they alfo are not in the wrong. However this may be, thefe depredations occafion a mifunderfanding
mifunderftanding betweer the Bedouins and the inhabitants of the cultivated country, which renders them mutual enemies.

Such is the external fituation of the Arabs. It is fubject to great viciffitudes, according to the good or bad conduct of their chiefs. Sometimes a feeble tribe raifes and aggrandizes itfelf, whilf another, which was powerful, falls into decay, or perhaps is entirely annihilated; not that all its members perifh, but they incorporate themfelves with fome other; and this is the confequence of the internal conftitution of the tribes. Each tribe is compofed of one or more principal families, the members of which bear the title of Shaiks, i. e. chiefs or lords. Thefe families have a great refemblance to the Patricians of Rome, and the nobles of modern Europe. One of the Shaiks has the fupreme command over the others. He is the general of their little army, and fometimes affumes the title of Emir, which fignifies Commander and Prince. The more relations, children, and allies he has, the greater is his ftrength and power. To thefe he adds particular adherents, whom he ftudioufly attaches to him, by fupplying all their wants. Rut befides this, a number of fmall families,

> EGYPT AND SY゙RIA.
families, who, not being ftrong enough to live independent, ftand in need of protection and alliances, range themfelves under the banners of this chief. Such an union is called kabila, or tribe. Thefe tribes are difo tinguilhed from each other by the name of their refpective chiefs, or by that of the ruling family; and when they fpeak of any of the individuals who compofe them, they call them the children , fuch a chief, though they may not be all really of his blood, and he himfelf may have been long fince dead. Thus they fay, Beni Temin, Oulad Tai, the children of Temin and of Tai. This mode of expreffion is even applied, by metaphor; to the names of countries : the ufual phrafe for denoting its inhabitants, being to call them the cbildren of Jucbs a place. Thus the Arabs fay, Oulad Mafr, the Egyptians; Oulad Sbam, the Syrians: they would alfo fay, Oulad Franfa, the French.; Oulad Mofkour, the Ruffians, a remark which is not unime portant to ancient hiftory.

The government of this fociety is at once republican, arifocratical, and even defpotic, without exactly correfponding with any of there forms. It is republican, inafmuch as

Vol. I. Dd the
the people have a great influence in all affairs, and as nothing can be tranfacted without the confent of a majority. It is ariftocratical, becaufe the families of the Shaiks poffefs fome of the prerogatives which every where accompany power; and, laftly, it is defpotic, becaufe the principal Shaik has an indefinite and almoft abfolute authority, which, when he happens to be a man of credit and influence, he may even abufe; but the fate of thefe tribes confines even this abure to very narrow limits; for, if a chief fhould commit an act of injuftice, if, for example, he fhould kill an Arab, i: would be almoft impoffible for him to efcape punifhment; the refentment of the offended party would pay no refpect to his dignity; the law of retaliation would be put in force: and, fhould he not pay the blood, he would be infallibly affafinated, which, from the fimple and private life the Shaiks lead in their camps, would be no difficult thing to effect. If he haraffes his fubjects by feverity, they abandon him, and go over to another tribe. His own relations take advantage of his mifconduct to depore him, and advance themfelves to his fation. He can have no re-

$$
\text { EGYPT AND SYRIA. } 403
$$

fource in foreign troops; his fubjects communicate too eafily with each other to render it poffible for him to divide their interefts, and form a faction in his favour. Befides, how is he to pay them, fince he receives no kind of taxes from the tribe ; the wealth of the greater part of his fubjects being limited to abfolute neceffaries, and his own confined to very moderate poffeffions, and thofe too loaded with great expences?

The principal Shaik in every tribe, in fact, defrays the charges of all who arrive at or leave the camp. He receives the vifits of the allies, and of every perfon who has bufinefs with them. Adjoining to his tent is a large pavillion for the reception of all ftrangers and paffengers. There are held frequent affemblies of the Shaiks and principal men, to determine on encampments and removals; on peace and war; on the differences with the Turkih governors and the villages; and the litigations and quarrels of individuals To this crowd, which enters fucceffively, he muft give coffee, bread baked on the ahes; rice, and fometimes roafted kid or camel ; in a word, he muft keep open table; and it is the more important to him to be generous, as this generofity is clofely connected with
matters of the greateft confequence. On the exercife of this depend his credit and his power. The famifhed Arab ranks the libe rality which feeds him before every virtue, nor is this prejudice without foundation; for experience has proved that covetous chiefs never were men of enlarged views: hence the proverb, as juft as it is brief, A clofe fift, a narrow beart. To provide for thefe expences, the Shaik has nothing but his herds, a few fpots of cultivated ground, the profits of his plunder, and the tribute he levies on the high roads, the total of which is very inconfiderable. The Shaik, with whom I refided in the country of Gaza, about the end of 1784 , paffed for one of the moft powerful of thofe diftricts; yet it did not appear to me that his expenditure was greater than that of an opulent farmer. His perfonal effects, confifting in a few peliffes, carpets, arms, horfes, and camels, could not be eftimated at more than fifty thoufand livres (a little above two thoufand pounds); and it mult be obferved that in this calculation, four mares of the breed of racers, are valued at fix thoufand livres (two hundred and fifty pounds), and each camel at ten pounds ferling. We muft not therefore, when we fpeak
of the Bedouins, affix to the words Prince and Lord, the ideas they utually convey; we fhould come nearer the truth by comparing them to fubftantial farmers, in mountainous countries, whofe fimplicity they refemble in their drefs, as well as in their domeftic life and manners. A Shaik, who has the command of five hundred horfe, does not difdain to faddle and bridle his own, nor to give him barley and chopped fraw. In his tent, his wife makes the coffee, kneeds the dough, and fuperintends the dreffing of the victuals. His daughters and kinfwomen wafh the linen, and go with pitchers on their head, and veils over their faces, to draw water from the fountain. Thele manners agree precifely with the defcriptions in Homer, and the hiftory of Abraham, in Genefis. But it muft be owned that it is difficult to form a juft idea of them without having ourfelves been eye-witneffes.

The fimplicity, or, perhaps, more properly, the poverty, of the lower clafs of the Bedouins, is proportionate to that of their chiefs. All the wealth of a family confifts of moveables, of which the following is a pretty exact inventory. A few male and female camels, fome goats and poultry; a mare, and her bridle and faddle; a tent, a lance fixteen feet long, a Dd 3 crooked
crooked fabre, a rufty muiket, with a fint, or matchlock; a pipe, a portable mill, a pot for cooking, a leathern bucket, a fmall coffee roafter, a mat, fome clothes, a mantle of black wool, and a few glafs or filver rings, which the women wear upon their legs and arms. If none of thefe are wanting, their furniture is complete. But what the poor man fands moft in need of, and what he takes moft pleafure in, is his mare; for this animal is his principal fupport. With his mare the Bedouin makes his excurfions againft hoftile tribes, or feeks plunder in the country, and on the highways. The mare is preferred to the horle, becaufe the does not neigh (*), is more docile, and yields milk, which, on occafion, fatisfies the thirft, and even the hunger of her mafter.

Thus confined to the moft abfolute neceffities of life, the Arabs have as little induftry as their wants are few; all their arts confin in weaving their clumfy tents, and in making mats, and butter. Their whole commerce
(*) This ftrange aftertion may be found in other authors. M. Chonier, in his Recherches Hiflorizques fur les E1aures, Vol. IlI. page 139, affirms mares do not neigh. Mares in Europe, however, certainly neigh, as every body knows, or may know.
only extends to the exchanging camels, kids, fallions, and milk; for arms, clothing, a little rice or corn, and money, which they bury. They are totally ignorant of all fcience ; and have not even any idea of aftronomy, geometry, or medicine. They have not a fingle book; and nothing is fo uncommon, among the Shaiks, as to know how to read. All their literature confifts in reciting tales and hiftories, in the manner of the Arabian Nights Entertainments. They have a peculiar paffion for luch ftories; and employ in them almoft all their leifure, of which they have a great deal. In the evening, they feat themfelves on the ground, at the threfhold of their tents, or under cover, if it be cold, and there, ranged in a circle round a little fire of dung, their pipes in their mouths, and their legs croffed, they fit a while in filent meditation, till, on a fudden, one of them breaks forth with, Once upon a time - and continues to recite the adventures of fome young Shaik, and female Bedouin: he relates in what manner the youth firft got a fecret glimpre of his miftrefs ; and how he became defperately enamoured of her; he minutely defcribes the D d 4 lovely

## 408 TRAVELSIN

lovely fair, boafts her biack eyes, as large and foft as thofe of the gazelle; her languid and empaffioned looks, her arched eye-brows, refembling two bows of cbony: her waift ftreight, and fupple as a lance; he forgets not her fteps, light as thofe of the young filley, nor her eye-lames, blackened with kobl, nor her lips painted blue, nor her nails, tinged with the golden coloured benna, nor her breafts, refembling two pomegranates, nor her words, fweet as honey. He recounts the fufferings of the young lover, fo wafled with defire and pafion, that bis body no longer yields any Badorv. At length, after det.iling his various attempts to fee his miftrefs, the obftacles of the parents, the invations of the enemy, the captivity of the two lovers, \&c. he terminates, to the fatisfaction of the audience, by refloring themf, united and happy, to the paternal tent, and by receiving the tribute paid to his eloquence, in the Ma cba ailab he has merited (b). The Bedouins have likewife their love fongs, which have more fentiment and nature in them than
(b) An exclamation of praife, equivalent to admirably wicll!
thofe of the Turks, and inhabitants of the towns; doubtlefs, becaufe the formet, whofe manners are cliafte, know what love is; while the latter, abandoned to debauchery, are acquainted only with enjoyment.

When we confider how much the condition of the Bedouins, efpecially in the depths of the defert, refembles, in many refpects, that of the favages of America, we fhall be inclined to wonder why they have not the fame ferocity; why, though they fo often experience the extremity of hunger, the practice of devouring human flefh was never heard of among them; and why, in mort, their manners are fo much more fociable and mild. The following reafons appear to me the true folution of this difficulty.

It feems, at firft view, that A merica, being rich in pafturage, lakes, and forefts, is more adapted to the paftoral mode of life than to any other. But if we obferve, that thefe forefts, by affording an ealy refuge to animals, protect them more furcly from the power of man, we may conclude, that the favage has been induced to become a hunter, inftead of a fhepherd, by the nature of the
country. In this ftate, all his habits have concurred to give him a ferocity of character. The great fatigues of the chace have hardened his body; frequent and extreme hunger, followed by a fudden abundance of game, has rendered him voracious. The habit of fhedding blood, and tearing his prey, has familiarized him to the fight of death and fufferings. Tormented by hunger, he has defired flefh; and finding it eafy to obtain that of his fellow creature, he could not long hefitate to kill him to fatisfy the cravings of his appetite. The firft experiment made, this cruelty degenerates into a habit; he becomes a cannibal, fanguinary and atrocious; and his mind acquires all the infenfibility of his body.

The fituation of the Arab is very different. Amid his vaft naked plains, without water, and without forefts, he has not been able, for want of game, or fifh, to become either a hunter or a fifherman. The camel has determined him to a paftoral life, the manners of which have influenced his whole character. Finding, at hand, a light, but conftant and fufficient nourifhment, he has acquired the habit of frugality. Content
with his milk and his dates, he has not defired fleih; he has fhed no blood: his hands are not accuftomed to flaughter, nor his ears to the cries of fuffering creatures, he has preferved a humane and fenfible heart.

No fooner did the favage fhepherd become acquainted with the ufe of the horfe, than his manner of life muft confiderably change. The facility of pafling rapidly over extenfive tracts of country, rendered him a wanderer. He was greedy from want; and became a robber from greedinefs; and fuch is, in fact, his prefent character. A plunderer, rather than a warrior, the Arab poffeffes no fanguinary courage ; he attacks only to defpoil; and, if he meets with refiftance, never thinks a finall booty is to be put in competition with his life. To irritate him, you muft fhed his blood, in which cafe he is found to be as obftinate in his vengeance as he was cautious in avoiding danger.

The Arabs have often been reproached with this fpirit of rapine; but, without wihhing to defend it, we may obferve, that one circumftance has not been fufficiently attended to, which is, that it only takes place towards reputed enemies, and is confequent-
ly founded on the acknowledged laws of almoft all nations. Among themfelves they are remarkable for a good faith, a difintereftednefs, a generofity which would do honour to the moft civilized people. What is there more noble than that right of afylum fo refpected among all the tribes? A ftranger, nay, even an enemy, touches the tent of the Bedouin, and, from that inftant, his perfon becomes inviolable. It would be reckoned a difgraceful meannefs, an indelible fhame, to fatisfy even a juft vengeance at the expence of hofpitality. Has the Bedouin confented to eat bread and falt with his gueft, nothing in the world can induce him to betray him. The power of the Sultan himfelf would not be able to force a refugee ( $i$ ) from the protection of a tribe, but by its total extermination. The Bedouin, fo rapacious without his camp, has no fooner fet his foot within it, than he becomes liberal and generous. What little he poffeffes he is ever ready to divide. He has even the delicacy not to wait till it is
(i) The Arabs difcriminate their guefts, into gueft moffadjir, or imp.crixg frotection; and into gueft matroub, who fets up bis tent in a line with theirs; that is, who becomes naturalized.
afked:
afked: when he takes his repaft, he affects to feat himfelf at the door of his tent, in order to invite the paffengers; his generofity is fo fincere, that he does not look upon it as a merit, but merely as a duty: and he, therefore, readily takes the fame liberty with others. To obferve the manner in which the Arabs conduct themfelves towards each other, one would imagine that they poffeffed all their goods in common. Neverthelefs, they are no ftrangers to property; but it has none of that felfifhnefs which the increafe of the imaginary wants of luxury has given it among polifhed nations. It may be alleged, that they owe this moderation to the impoflibility of greatly multiplying their enjoyments; but, if it be acknowledged, that the virtues of the bulk of mankind are only to be afcribed to the neceffity of circumftances, the Arabs, perhaps, are not for this lefs worthy our efteem. They are fortunate, at leaft, that this neceffity fhould have eftablifhed among them a fate of things, which has appeared to the wifeft legilators as the perfection of human policy: I mean, a kind of equality in the partition of property, and the varicty
of conditions. Deprived of a multitude of enjoyments, which nature has lavifhed upon other countries, they are lefs expofed to temptations which might corrupt and debafe them. It is more difficult for their Shaiks to form a faction to enflave and impoverifh the body of the nation. Each individual, capable of fupplying all his wants, is better able to preferve his character, and independence; and private poverty becomes at once the foundation and bulwark of public liberty.

This liberty extends even to matters of religion. We obferve a remarkable difference between the Arabs of the towns and thofe of the defert; fince, while the former crouch under the double yoke of political and religious defpotifm, the latter live in a ftate of perfect freedom from both: it is true that on the fiontiers of the Turks, the Bedouins, from policy, preferve the appearance of Mahometanifm; but fo relaxed is their obfervance of its ceremonies, and fo little fervor has their devotion, that they are generally confidered as infidels, who have neither law nor prophets. They even make no difficulty in laying that the religion of Mahomet was
not made for them ; "for," add they, "how " flall we make ablutions who have no " water? How can we beftow alms, who " are not rich? Why fhonld we faft in the "Ramadan, fince the whole year with us is one " continual faft? and what neceffity is there " for us to make the pilgrimage to Mecca, " if God be prefent every where ?" In hort, every man acts and thinks as he pleafes, and the moft perfect toleration is eftablifhed among them. Nothing can better defcribe, or be a more fatisfactory proof of this than a dialogue which one day paffed between myfelf and one of their Shaiks, named Ahmed, fon of Bahir, chief of the tribe of Wahidia. "Why," faid this Shaik to me, " do you wih to return among the Franks? "Since you have no averfion to our manners; " fince you know how to ufe the lance, " and manage a horfe like a Bedouin, ftay " among us. We will give you peliffes, a "tent, a virtuous and young Bedouin "girl, and a good blood mare. You mall " live in our houfe."-" But do you not " know," replied I, "that, born among the "Franks, I have been educated in their re$\because$ ligion? In what light will the Arabs view
" an infidel, or what will they think of and " apoftate?"-" And do not you yourfelf " perceive," faid be, "that the Arabs live " without troubling themfelves either about ؛s the Prophet, or the Book (the Koran)? "Every man with us follows the direction " of his confcience. Men have a right to " judge of actions, but religion muft be left " to God alone." - Another Shaik, converfing with me, one day, addreffed me, by miftake, in the cuftomary formulary, "Liften, "s and pray for the Prophet." Inftead of the ufual anfwer, I bave prayed, I replied, with a fmile, I liften. He recollected his error, and fmiled in his turn. A Turk of Jerufalem, who was prefent, took the matter up more ferioully: "O Shaik," faid he, " how " canft thou addrefs the words of the true " believers to an infdel ?" "The tongue is " light," replied the Shails, "let but the " heart be rcbite (pure); but you, who " know the cuftoms of the Arabs, how " can you offend a feranger with whom "we have eaten bread and fait ?"-Then, turning to me, "All thofe tribes of Frank" eftan, of whom you told me that they * follow not the law of the Prophet, or are
" are they more numerous than the mufful-
" men?" "It is thought," abfwered I, "that
" they are five or fix times more numerous,
"even including the Arabs."-"God is juft," returned he, " he will weigh them in his " balance (k)."

It
(k) M. Niebuhr relates in his Dejoritption de l'Arabie, tome II. page 208, Paris edition, that, within the laft thirty years, a new religion has fprung up in the Najd, the principles of which are analogous to the difpofition of mind I have been defcribing. "Thefe prin" ciples," fays that traveller, "ore, that God alone "s fhould be invoked and adorcd, as the author of all "s things; that we fhould make no mention of any "6 prophet in praying, becaufe that too nearly re"s fembles idolatry: that Mofes, Jefus Chriff, Maho"s met, \&ic. were in truth great men, whofe actions " are edifying; but that no book was ever infpired by "s the angel Gabriel, or any other celeftial fpirit. In "f fhort, that vows made in the time of imminent "s danger are neither meritorious nor oblifatory. I "6 do not know," adds M. Niebuhr, " how far we "s may truft the veracity of the Bedouin who told "c me this. Perhaps it was his peculiar way of think" ing; for the Bedouins, though they call themelves " Mahometans, in general, care very little about either "6 Maliomet or the Koran."

The authors of this new fect were two Arabs, who, having travelled, in confequence of fome commercial affairs, inio Perfia and Malabar, reafoned on the diVol. I.

E

It inult be owned, that there are few pclifhed nations whofe morality is, in general, fo much to be efteemed as that of the Bedouin Arabs; and it is worthy of remark that the fame virtues are equally to be found in the Turkmen hordes, and the Curds. It is fingular alfo, that it fhould be among thefe that religion is the freef from exterior forms, infomuch that no man has ever feen, among the Bedouins, the Turkmen, or Curds, either priefts, temples, or regular worfhip. But it is time to continue the defrription of the other tribes of the inhabitants of Syria, and to direct our attention to a focial fate, very different from that we are now quitting, to the ftate of a cultivating and fedentary pcople.
verfity of religions they had feen, and thence deduced this general tuleration. One of them, named Abd-el-Waheb, in 1760 , erected an independent fate in the Najd; the other, called Mekrami, Shaik of Nadjeran, had adopted the fame opinions; and, by his valour, raifed himfelf to confiderable power in thofe countries. Thefe two examples render ftull more probable a conjecture 1 have already mentioned, That nothing is nore cafy than to cffect a grand political and rcligiteres icvolution in Afra.
