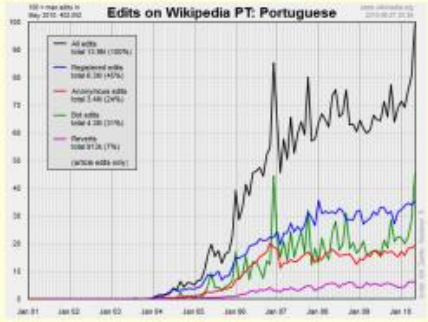
Wikipedia Statistics - Edit and Revert Trends: Portuguese

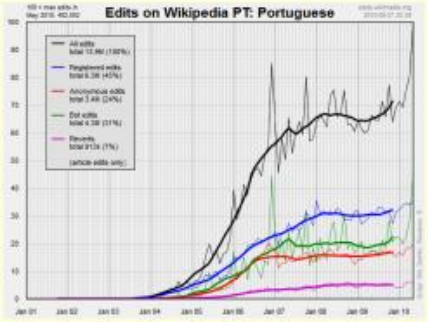
Monday May 31, 2010

Monthly trend in number of edits

Also shown is monthly trend for total reverts, for scale comparison

Chart shows absolute numbers (y axis scale shows number of edits relative (%) to busiest month)





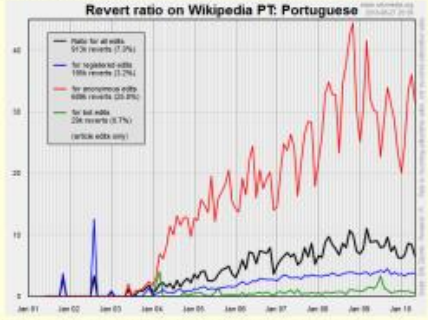
Monthly trend in revert activity, relative to edit volume

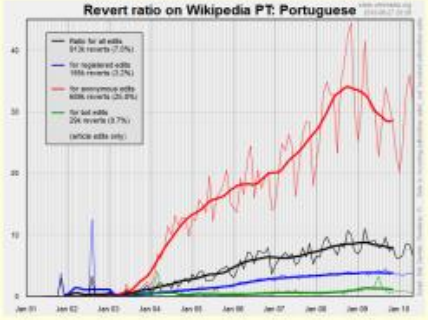
Per x edits, were anonymous edits reverted more often than edits by bots or by registered users?

Chart shows relative numbers (100 on y axis means: as many reverted as not reverted edits, ratio 1:1, or 100%).

Note: often peaks in revert ratio in early years are not so significant as in later years

low absolute edit counts easily led to high fluctuations in revert ratio.





Distribution of reverts

Breakdown per namespace, type of reverted editor (registered or anonymous user or bot), type of reverter (same), was it a self revert or not, per time period.

Note: a high percentage in any segment can relate to a high absolute number of edits for that segment, or a high revert ratio, or both (please consult charts above for context)

Projects pages are excluded due to enormous amount of false positives: some status pages are cleared often as normal process

Distribution of reverts, each subdivision adds up to 100%

Namespace(s)		Reverted editor		Revert by		Self revert
Articles	67.3%	Reg user	18.9%	Reg user	82.9%	Self 28.9% Others 66.9%
